SCHEME & SYLLABUS
M.Tech(Regular) Computer Science
and Engineering

As per NEP 2020

Department of Computer Science & Engineering
UIET

Sant Baba Bhag Singh University

2023 onwards

Programme Code: PG015

ABOUT THE DEPARTMENT

The Department of Computer Science and Engineering focuses not only on the theoretical aspects but emphasize the overall development of the students. There are Special Interest Groups among the faculty who are focused in their research domains like Data Mining and Big Data Analytics, Wireless & Mobile Computing, Security & Trust Computing, Wireless Sensor Networks & IOT, Soft Computing, Image Processing, Machine Learning and Data Analytics, Natural Language Processing, Cloud Computing and Social Networking, Network Security, Service Oriented Architecture and Theoretical Computer Sciences. The department's many strengths include its high faculty to student ratio, state of the art facilities, strong focus on teaching learning balanced with leading-edge research and emphasis on leadership, service and ethics. The efficacy of the Teaching-Learning process is reflected in the consistently excellent results being achieved every year. To augment professional competence, the department supports outside talents to gain more inputs, organizes hackathons, seminars, workshops, industrial visits and expert lectures not only to offer a new dimension to the learning process but also infuse leadership qualities in the budding engineers.

SALIENT FEATURES OF THE DEPARTMENT

1. Provides a learning environment strongly focused on collaborative and interdisciplinary research under the guidance of experienced and qualified faculty. Majority of the faculty members are doctorates.
2. The teaching programme, here, is devised keeping in view the significance of Industry-Academia interaction enabling the students to face the global competitiveness with effective communication skills.
3. The CSE Department regularly organizes conferences, hackathons, seminars, student symposia, short-term training program and value added courses. This provides a wide range of opportunities for faculty and students to bring out their potential and innovative skills in a variety of fields.
4. The department has well equipped computing laboratories and a rich repository of software covering a wide spectrum of applications. The department in collaboration with IIT has setup Virtual lab for remote experiments. Besides this department takes in NEPTEL and MOOC courses both for its students and faculty.
5. Digital Library with access to journals and video lectures of eminent professors.

M.TECH (MASTERS IN TECHNOLOGY)

Educational qualification matters a lot in gaining success. Along with academic qualification, technical skills are also required. Candidates possessing higher degree will be given preference. Master of Technology (M.Tech) is the higher specialized course in the field of engineering. The duration of this course is 2 years. M.Tech provides you the insight and deep knowledge of the subjects that you have studied in your B.Tech course.

Programme Code: PG015

VISION

Empower every student to be innovative, creative and acquire skills in Computer Science & Engineering to enrich society and achieve a happy, successful and meaningful life.

MISSION

Our mission is to provide a high-quality undergraduate and post graduate education in Computer Science & Engineering that provides all-round growth of an individual by creating futuristic environment that fosters critical thinking, dynamism and innovation to transform them into globally competitive professionals and empowering the youth in rural communities with computer education.

ELIGIBILITY CRITERIA

- For postgraduate engineering programme (M.Tech), students are admitted after they have obtained at least a college level Bachelor's degree in Technology (B.Tech) in related field.
-

DURATION

2 Years

CAREER PATHWAY

Teaching career is always open for M.Tech students. After holding master's degree, they can apply in any prestigious engineering institution for the post of professor.

➤ **Government job**

The aspirants can find many opportunities in public sector. Many public sector firms recruit candidates with M.Tech in Computer Science Engineering. Some of these companies are ONGC, ISRO, BHEL, ECIL, DRDL, SAIL, etc. The candidates can also appear for various competitive exams like public sector bank tests, UPSC, SSC, etc. The aspirants who are interested in teaching can take up jobs in various government colleges.

➤ **Private Sector Jobs**

There are huge openings in private sector for candidates of computer science engineering. The candidates can find opening in companies like Infosys, TCS, IBM, Wipro, HCL, Accenture, etc. The candidates can find many job opportunities abroad as well.

➤ **Higher Studies**

This pathway prepares students for Doctorate studies.

➤ **Entrepreneurship-** To set up new ventures

Programme Code: PG015

Distinct features of model PG curriculum in Engineering and Technology:

1. Standardized academic structure for all PG Programs with uniform credit distribution.
2. Advanced study of specialization through core subjects, flexible and diverse program specific electives.
3. Open electives to widen skills.
4. Enhanced engagement of industry in developing innovations and problem solutions.
5. Collaborating and interactive learning to ensure talent development.
6. Inbuilt mechanism for regular upgradation of curriculum.
7. Focus on development of advanced knowledge and specific skills required for industrial development.
8. Ensured competency development of learner

Programme Outcomes (PO)

At the end of Programme , the post graduates will be able to

1. An understanding of the theoretical foundations and the limits of computing.
2. An ability to adapt existing models, techniques, algorithms, data structures, etc. for efficiently solving problems.
3. An ability to design, develop and evaluate new computer based systems for novel applications which meet the desired needs of industry and society.
4. Understanding and ability to use advanced computing techniques and tools.
5. An ability to undertake original research at the cutting edge of computer science & its related areas.
6. An ability to function effectively individually or as a part of a team to accomplish a stated goal.
7. An understanding of professional and ethical responsibility.
8. An ability to communicate effectively with a wide range of audience.
9. An ability to learn independently and engage in life-long learning.
10. An understanding of the impact of IT related solutions in an economic, social and environment context.

Programme Code: PG015

Post -Graduate Programme Educational Objective (PEO)

The Graduate/Postgraduate will be....

PEO1.	Contributing to research and development through the knowledge gained during study of specializations in Computer Science & Engineering.
PEO2.	Developing innovative solutions to complex problems using research ethics and Intellectual property rights.
PEO3	Demonstrating human values and professional ethics while working collaboratively on multidisciplinary projects.
PEO4	Pursuing career in life long learning or generating employments by setting of startups for the welfare and well being of rural youth.

Post Graduate Programme Specific Outcomes (PSO)

PSO1.	Analyze and understand the need of research and development, Intellectual property rights , patents and plagiarism checking tools.
PSO2.	Ability to understand the need of human values and professional ethics while publishing research papers, writing and developing research projects, research grants, books and dissertations.
PSO3	Pursue a career in software development, entrepreneurship, database administration, network and cyber security, artificial intelligence, machine learning, higher studies, teaching or quality testing using available CASE tools.

Programme Code: PG015

AICTE MODEL

M. Tech. (Computer Science & Engineering) Semester I

Course Number	Subject
1CS01	Program Core I- Mathematical foundations of Computer Science
1CS02	Program Core II-Advanced Data Structures
1CSxx	Program Elective I – Machine Learning/ Wireless Sensor Networks/ Introduction to Intelligent Systems
1CSxx	Program Elective II – Data Science/ Distributed Systems/ Advanced Wireless and Mobile Networks
1Axxx	Research Methodology and IPR
1Axxx	Audit Course
1CS03	Laboratory 1 (Advanced Data Structures)
1CS04	Laboratory 2 (Based on Electives)

Semester II

Course Number	Subject
2CS05	Program Core III - Advance Algorithms
2CS06	Program Core IV - Soft Computing
2CSxx	Program Elective III – Data Preparation and Analysis/ Secure Software Design & Enterprise Computing/ Computer Vision
2CSxx	Program Elective IV – Human and Computer Interaction/ GPU Computing/ Digital Forensics
2Axxx	Audit Course
2CS07	Laboratory 3 (Based on cores)
2CS08	Laboratory 4 (Based on Electives)
2CS09	Mini Project with Seminar

Programme Code: PG015

Semester III

Course No.	Subject
3CSxx	Program Elective 5 – Mobile Applications and Services/ Compiler for HPC/ Optimization Techniques
3CSxx	Open Elective – 1. Business Analytics 2. Industrial Safety 3. Operations Research 4. Cost Management of Engineering Projects 5. Composite Materials 6. Waste to Energy
3CS10	Dissertation-I/Industrial Project

Semester IV

	Subject
	Dissertation II

Audit course 1 & 2

1. English for Research Paper Writing
2. Disaster Management
3. Sanskrit for Technical Knowledge
4. Value Education
5. Constitution of India
6. Pedagogy Studies
7. Stress Management by Yoga
8. Personality Development through Life Enlightenment Skills.

First Semester

Course Code	CSE501
Course Title	Artificial Intelligence Techniques
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Basic knowledge of discrete structure, knowledge representation, reasoning, planning etc.
Course Objectives	The objective of this course is to cover the advance topics in probability theory, uncertain reasoning and machine learning that are commonly used in modern artificial intelligence.
Course Outcomes (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Explain what constitutes "Artificial" Intelligence and how to identify systems with Artificial Intelligence 2. Explain how Artificial Intelligence enables capabilities that are beyond conventional technology, for example, chess- playing computers, self-driving cars, robotic vacuum cleaners. 3. Use classical Artificial Intelligence techniques, such as search algorithms, mini-max algorithm, neural networks, tracking, and robot localization. 4. Apply Artificial Intelligence techniques for problem solving.

SYLLABUS

UNIT I

Introduction

Basic Knowledge of Artificial Intelligence, Problem solving techniques, Knowledge representation, Planning, Prolog, LISP and Other AI Programming Languages, Learning and Neural Network.

UNIT II

Introduction to Probability Theory

Probability definitions, Bayes rule and its applications, Probabilistic Reasoning: Bayesian networks: representation and inference, Belief Propagation, MCMC algorithm, other methods, sample applications

Probabilistic Reasoning over Time

Hidden Markov Models, Dynamic Bayesian networks, Utility theory, Decision networks

UNIT III

Making Complex Decisions

Decision-Making: basics of utility theory, decision theory, sequential decision problems, elementary

game theory, Partially observable Markov decision problems (POMDPs), sample applications

UNIT IV

Learning from Observations

Inductive learning, decision trees, ensemble learning , Statistical Learning: Complete data, Hidden nodes (EM method), Instance based learning, Neural networks, Reinforcement Learning: Passive and active, sample applications

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Artificial Intelligence: A Modern Approach	S. Russell and P. Norvig	Prentice-Hall, Third Edition.
2	Introduction to Artificial Intelligence	Eugene Charniak, Drew McDermott	Addison Wesley.
3	AI-Structures and Strategies for Complex Problem Solving	George Lugar	4 th edition Pearson Educations
4	Artificial Intelligence: an Engineering approach	Robert J. Schalkolf	McGraw Hill.
5	Decision Support Systems and Intelligent Systems	Efraim Turban Jay E.Aronson	PHI
6	Artificial Intelligence – Strategies, Applications, and Models through Search	Christopher Thornton and Benedict du Boulay	New Age International Publications

Course Code	CSE503
Course Title	Advanced Data Structure Programming
Type of Course	PC
L T P	3 0 0
Credits	3
Course Prerequisites	Computer algorithms, C/C++, basics of data structures
Course Objectives	<ol style="list-style-type: none"> 1. The student should be able to choose appropriate data structures, understand the ADT/libraries, and use it to design algorithms for a specific problem 2. Students should be able to understand the necessary mathematical abstraction to solve problems. 3. To familiarize students with advanced paradigms and data structure used to solve algorithmic problems. 4. Student should be able to come up with analysis of efficiency and proofs of correctness.
Course Outcomes (CO)	After completion of course, students would be able to: <ol style="list-style-type: none"> 1. Understand the implementation of symbol table using hashing techniques. 2. Develop and analyze algorithms for red-black trees, B-trees and Splay trees. 3. Develop algorithms for text processing applications. 4. Identify suitable data structures and develop algorithms for computational geometry problems.

SYLLABUS

UNIT I

Algorithms and Performance analysis: Time complexity and space complexity, Asymptotic Notation- Big Oh, Omega and Theta notations, Complexity Analysis Examples, Data structures-Linear and non linear data structures, ADT concept, Linear List ADT.

UNIT II

Array & Linked List: Array representation, Linked representation, Vector representation, singly linked lists -insertion, deletion, search operations, doubly linked lists-insertion, deletion operations, circular lists, Representation of single, two dimensional arrays, Sparse matrices and their representation.

Stack and Queues: ADTs, array and linked list representations, infix to postfix conversion using stack, implementation of recursion, Circular queue-insertion and deletion, De-queue ADT, array and linked list representations, Priority queue ADT

UNIT III

Trees & Graphs: Ordinary and Binary trees terminology, Properties of Binary trees, Binary tree ADT, representations, recursive and non recursive traversals, threaded binary trees, implementation using Heaps,

Insertion into a Max Heap, Deletion from a Max Heap.

Graphs- Graphs terminology, Graph ADT, representations, graph traversals/search methods-DFS and BFS, Applications of Graphs-Minimum cost spanning tree using Kruskal's algorithm, Dijkstra's algorithm for Single Source Shortest Path Problem.

UNIT IV

Search Trees- Binary search tree-Binary search tree ADT ,insertion, deletion and searching operations, Balanced search trees, AVL trees-Definition and examples only, Red Black trees – Definition and examples only, B-Trees-definition, insertion and searching operations, Comparison of Search trees. Text compression-Huffman coding and decoding, Pattern matching-KMP algorithm.

Searching & Sorting: Linear and binary search methods, Hashing-Hash functions, Collision Resolution methods-Open Addressing, Chaining, Hash-Set, Hash-table. Sorting –Bubble sort, Insertion sort, Quick sort, Merge sort, Heap sort, Radix sort, comparison of sorting methods.

RECOMMENDED BOOKS

Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Data structures, Algorithms and Applications in Java	S. Sahni	Universities Press
2	Data structures and Algorithms in Java	Adam Drozdek	Cengage learning
3	Data Structures, Algorithms and Applications in C++	Sartaj Sahni	Tata McGraw Hill
4	Data Structures using C and C++	Tenenbaum, Augenstein, &Langsam	Prentice Hall of India

Course Code	CSE505
Course Title	Cyber security
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Basic knowledge of computer system
Course Objective (CO)	The main aim of this course is to provide knowledge about how to secure our data on the Internet.
Course Outcome (CO)	The students will able to: <ol style="list-style-type: none"> 1. Implement cyber security best practices and risk management 2. Integrate network monitoring and present real-time solutions 3. Impact cyber security risk in an ethical, social, and professional manner. 4. Learn basics of cyber laws and cyber forensic

SYLLABUS

UNIT I:

Introduction to Cyber Security: Overview of Cyber Security, Cyber Threats:- Cyber Warfare-Cyber Crime-Cyber terrorism-Cyber Espionage

Cyber Security Vulnerabilities and Cyber Security Safeguards: Cyber Security Vulnerabilities-Overview, vulnerabilities in software, System administration, Complex Network Architectures, Open Access to Organizational Data, Weak Authentication, Unprotected Broadband communications, Poor Cyber Security Awareness. Cyber Security Safeguards- Overview, Access control, Audit, Authentication, Biometrics, Cryptography, Deception, Denial of Service Filters, Ethical Hacking, Firewalls, Intrusion Detection Systems, Response, Scanning, Security policy, Threat Management.

UNIT II:

Intrusion Detection and Prevention: Intrusion, Physical Theft, Abuse of Privileges, Unauthorized Access by Outsider, Malware infection, Intrusion detection and Prevention Techniques, Anti-Malware software, Network based Intrusion detection Systems, Network based Intrusion Prevention Systems, Host based Intrusion prevention Systems, Security Information Management, Network Session Analysis, System Integrity Validation.

UNIT III:

Cryptography and Network Security: Introduction to Cryptography, Symmetric key Cryptography, Asymmetric key Cryptography, Message Authentication, Digital Signatures, Applications of Cryptography. Overview of Firewalls- Types of Firewalls, User Management, VPN Security Security Protocols: - security at the Application Layer- PGP and S/MIME Security at Transport Layer- SSL and TLS, Security at Network Layer-IPSec.

UNIT IV:

Cyberspace and the Law: Introduction, Cyber Security Regulations, Roles of International Law, the state and Private Sector in Cyberspace, Cyber Security Standards. The INDIAN Cyberspace, National Cyber Security Policy 2013.

Cyber Forensics: Introduction to Cyber Forensics, Handling Preliminary Investigations, Controlling an Investigation, Conducting disk-based analysis, Investigating Information-hiding, Scrutinizing E-mail, Validating E-mail header information, Tracing Internet access, Tracing memory in real-time

RECOMMENDED BOOKS

Sr. no.	Name	AUTHOR(S)	PUBLISHER
1.	Cybersecurity and Cyberwar: What Everyone Needs to Know®	Allan Friedman and P. W. Singer	Oxford University Press
2.	Cybersecurity for Beginners	Raef Meeuwisse	Cyber Simplicity Limited
3.	Cybersecurity Essentials	Charles J. Brooks, Christopher Grow, Donald Short, and Philip Craig	Sybex

Course Code	CSE507
Course Title	Advanced Distributed Systems
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Students are expected to know and understand the fundamentals of operating systems, to be able to program in both Java and C/C++ in a Unix environment.
Course Objectives	To list the principles underlying the functioning of distributed systems, describe the problems and challenges associated with these principles, To recognize how the principles are applied in contemporary distributed systems, explain how they affect the software design, and be able to identify features and design decisions that may cause problems; To build distributed system software using basic OS mechanisms as well as higher-level middleware and languages.
Course Outcomes (CO)	The learner will be able to- <ol style="list-style-type: none"> 1. Understand the basic principles of distributed systems. 2. Describe the problems and challenges associated with functioning of distributed systems. 3. Explain how these problems affect the software design 4. Build distributed system software.

SYLLABUS

UNIT I

Characterization of Distributed Systems: Introduction, Examples of Distributed systems, Resource sharing and web, challenges, System models-Introduction, Architectural and Fundamental models, Networking and Internetworking, Interprocess Communication, Distributed objects and Remote Invocation-Introduction, Communication between distributed objects, RPC, Events and notifications, Case study-Java RMI.

UNIT II

Operating System Support: Introduction, OS layer, Protection, Processes and Threads, Communication and Invocation, Operating system architecture, Distributed File Systems-Introduction, File Service architecture, case study- SUN network file systems. Name Services-Introduction, Name Services and the Domain Name System, Case study of the Global Name Service, Case study of the X.500 Directory Service.

UNIT III

Peer to Peer Systems: Introduction, Napster and its legacy, Peer to Peer middleware, Routing overlays, Overlay case studies- Pastry, Tapestry, Application case studies- Squirrel, Ocean

Store. Time and Global States - Introduction, Clocks, events and Process states, Synchronizing

Physical clocks, logical time and logical clocks, global states, distributed debugging. Coordination and Agreement - Introduction, Distributed mutual exclusion, Elections, Multicast communication, consensus and related problems.

UNIT IV

Transactions and Concurrency control: Introduction, Transactions, Nested Transactions, Locks, Optimistic concurrency control, Timestamp ordering, Comparison of methods for concurrency control, Distributed Transactions- Introduction, Flat and Nested Distributed Transactions, Atomic commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery, Replication- Introduction, System model and group communication, Fault tolerant services, Transactions with replicated data.

Security: Introduction, Overview of Security techniques, Cryptographic algorithms, Digital signatures, Case studies- Kerberos, TLS, 802.11 Wi-Fi. Distributed shared memory, Design and Implementation issues, Sequential consistency and Ivy case study, Release consistency and Munin case study, Other consistency models, CORBA case study - Introduction, CORBA RMI, CORBA Services.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Distributed Systems Concepts and Design	G Coulouris, J Dollimore and T Kindberg	Pearson Education: New Delhi
2	Distributed Systems :An algorithmic approach	Sukumar Ghosh	CRC press
3	Distributed Systems: Principles and Paradigms	Andrew S.Tanenbaum	Pearson
4	Modeling Distributed Systems	Fokkink, Wan	Springer

Course Code	CSE509
Course Title	Network Technology and Security
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Basic knowledge of Computer Networks
Course Objectives (CO)	This course is intended to provide an understanding of various security techniques that should be implemented across Network to protect data and information. This includes various encryption and decryption techniques.
Course Outcome (CO)	The learner will be able to- <ol style="list-style-type: none"> 1. Understand basic protocols of Ipv6 2. Explain the need of security techniques across network to protect data and information. 3. Describe encryption and decryption techniques 4. Design a secured network

Syllabus

Unit-I

Introduction to Ipv6: Basic Protocol, extensions and options, support for QoS, security, neighbour discovery, auto configuration, routing, Application Programming Interface for IPV6.

Unit-II

Security Trends- Attacks and services, Classical crypto systems, different types of ciphers, Basic Number theory, Congruence's, Chinese Remainder theorem.

Unit-III

Simple DES- Differential cryptanalysis, DES- Modes of operation, Triple DES, AES, RC4, Attacks, Factoring.

Discrete Logarithms- Diffie-Hellman key exchange, EIG key cryptosystems, hash functions, secure hash, birthday attacks, MDS, DSA, unwanted traffic: denial of service attacks.

Unit-IV

Authentication Applications- Kerberos, X.509, PKI, Electronic mail security, PGP security, web security, SSL, TLS, SET.

Cryptography- Plain text and cipher test, substitution techniques, polygram, Hill Cipher, Transposition techniques, Encryption and Decryption, Symmetric and asymmetric key, Steganography, key range and key size, Possible types of attack.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Cryptography and Network security- principles and Practices	William Stallings	Prentice Hall of India Pvt. Ltd., New delhi
2	Cryptography and Network security	Atul Kahate	Tata Mc-Graw Hill
3	Computer Networks	A.S. Tanebaum	Pearson

Course Code	CSE511
Course Title	Wireless Communications
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Nil
Course Objective	To gain an understanding of the principles behind the design of wireless communication systems and technologies.
Course Outcomes	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Understand and explain the Classification of mobile communication systems. 2. Examine state-of-the-art distributed systems, such as Google File System. 3. Learn the principles, architectures, algorithms and programming models used in distributed systems

SYLLABUS

UNIT-I

Introduction: A basic cellular system, performance criteria, operation of cellular systems, planning a cellular system, analog & digital cellular systems. Examples of Wireless Communication Systems: Paging Systems, Cordless Telephone Systems, Cellular Telephone Systems.

GSM system : Architecture and features ; GSM Services ; Authentication ; Incoming & outgoing call flow ; Handover in GSM.

UNIT-II

Digital Communication through fading multipath channels: Fading types and their characteristics. Concept of diversity branches and signal paths- Combining methods- Selective diversity combining-pre-detection and post-detection combining- Switched combining- maximal ratio combining- Equal gain combining. Different type of channels: Control & Traffic channels.

BTS hardware: Introduction of BTS 3900 series ; Baseband unit (BBU); Radio Frequency unit (RFU) ; Description of Cards; Login to BTS 3900

UNIT-III

Multiple Access Techniques for Wireless Communications: Introduction, Frequency Division Multiple Access(FDMA), Time Division Multiple Access (TDMA), Spread Spectrum Multiple Access,CDMA (code division multiple access),Space Division Multiple Access. WCDMA (wideband CDMA) features and architecture, handoff and its types.

UNIT-IV

Wireless Systems & Standards: GPRS/EDGE specification features and architecture, 3G systems: Application of 3G & UMTS & CDMA 2000 standards, specifications and architecture of UMTS , Forward CDMA Channel, Reverse CDMA Channel. BSC Hardware: Introduction to 6900 series ;MPR & EPR; Description of Cards ; Login to BSC 6900. Future trends: Blue Tooth technology, 4G mobile techniques, Wi-Fi Technology,LTE advance system, zigbee.

RECOMMENDED BOOKS			
Sr. no.	Name	Author(s)	Publisher
1	Wireless Communications	T.S.Rappaport,	Principles Edition, and Practice, 2 nd Pearson Education Asia, 2010.
2	Mobile Cellular Telecommunications	William C Y Lee	2nd Edition, MGH.
3	Mobile and Personal Communication systems and services	Raj Pandya	Prentice Hall of India.
4	Wireless and Digital Communications	Dr. Kamilo Feher	TMH

Course Code	CSE513
Course Title	Data Mining and Data Warehouse Technology
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Database Management System
Course Objectives	Students will be enabled to understand and implement classical models and algorithms in data warehousing and data mining. They will learn how to analyze the data, identify the problems, and choose the relevant models and algorithms to apply. They will further be able to assess the strengths and weaknesses of various methods and algorithms and to analyze their behavior.
Course Outcome (CO)	The learner will be able to- <ol style="list-style-type: none"> 1. Identify the problem 2. Understand models and algorithms in data warehousing and data mining 3. Choose relevant models and algorithms 4. Apply and analyze the behavior of the algorithms.

SYLLABUS

UNIT I

Data Warehousing: Need for Data Warehousing, Paradigm Shift, Operational and Informational Data Stores, Data Warehouse Characteristics, Architecture for a Data Warehouse Data Warehouse Sourcing, Acquisition, Cleanup and Transformation tools, Metadata, Access Tools, Data Marts.

OLAP Tools: Need for OLAP, Multidimensional Versus Multi relational OLAP, Categorization of OLAP tools, OLAP operations, Identifying Facts and Dimensions, Designing Fact Tables, Designing Dimension Tables

Building a Data Warehouse: Data Warehouse Schemas. Steps for the Design and Construction of Data Warehouses.

UNIT II

Data Mining: Introduction: Motivation, Knowledge Discovery Process, Kind of Data, Data Mining Functionalities, Interesting Patterns, Classification of Data Mining Systems, Major issues. Data Preparation: Pre-process, Data Cleaning, Data Integration and Transformation, Data Reduction.

UNIT III

Mining Frequent patterns, Associations and Correlations: Market Basket Analysis, Frequent Itemsets. Decision Tree: Basics, Building a Decision Tree.

UNIT IV

Clustering: Clustering in Grouping, Classical Partitioning Methods: k-Means and k-Medoids

Agglomerative Hierarchical Clustering, and Divisive Hierarchical Clustering. Classification-Supervised and Unsupervised classification techniques, Neural Network approach, K-nearest neighbourhood.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Data Warehousing, Data Mining & OLAP	A. Berson, S.J. Smith	Tata McGraw-Hill
2	Data Mining Concepts and Techniques	J Han, M. Kamber and J. Pei	Elsevier India
3	Data mining Applications with R	Zhao Y., Cen Y.	Elsevier India
4	Data Mining – Concepts and Techniques	Jiawei Han & Micheline Kamber	Elsevier India

Course Code	CSE515
Course Title	Adhoc Networking
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Computer networks
Course Objectives	This subject provides the knowledge of Adhoc network and sensors
Course Outcomes (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Understand MAC protocols. 2. Classify routing protocols. 3. Identify issues in adhoc transport layer. 4. Describe Sensor Network architecture. 5. Explain issues in WSN routing. 6. Explain IEEE 802.11s Architecture

SYLLABUS

UNIT I

Ad-Hoc MAC

Introduction, Issues in Ad-Hoc Wireless Networks. MAC Protocols, Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

UNIT II

Ad-Hoc Network Routing & TCP

Issue, Classifications of routing protocols, Hierarchical and Power aware. Multicast routing, Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc, Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.

UNIT III WSN -

MAC

Introduction, Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols, self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

WSN Routing, Localization & QoS

Issues in WSN routing, OLSR, AODV. Localization, Indoor and Sensor Network Localization. QoS in WSN.

UNIT IV

Mesh Networks

Necessity for Mesh Networks, MAC enhancements, IEEE 802.11s Architecture, Opportunistic routing, Self configuration and Auto configuration, Capacity Models, Fairness, Heterogeneous Mesh Networks, Vehicular Mesh Networks

RECOMMENDED BOOKS

Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Ad Hoc Wireless Networks – Architectures and Protocols	C.Siva Ram Murthy and B.Smanoj	Pearson Education.
2	Wireless Sensor Networks	Feng Zhao and Leonidas Guibas,	Morgan Kaufman Publishers.
3	Ad Hoc Mobile Wireless Networks	C.K.Toh	Pearson Education.
4	Wireless Mesh Networking	Thomas Krag and SebastinBuettrich	O'Reilly Publishers.

Course Code	CSE517
Course Title	Advanced Parallel Computing
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Basic knowledge of Computer System Architecture
Course Objectives	Students become familiar with parallel computer architecture and algorithms.
Course Outcome (CO)	The learner will be able to- 1. Understand basic terms used in parallel computing 2. Classify parallel computers 3. Describe parallel computer architecture 4. Analyze parallel algorithms

SYLLABUS

UNIT-I

Introduction to Parallel Computing: Basic concepts about program/process/ thread, Concurrent Execution, Parallel Execution, granularity, Potential of Parallelism; Need of Parallel Computation; Levels of parallel processing; Parallel processing Vs. Parallel computing; Dataflow Computing concept; Applications of parallel processing-Scientific Applications / Image processing, Engineering Application, Database query / Answering applications, AI Applications, Mathematical simulations and modeling

Classification of Parallel Computers: Types of Classification; Flynn's/ Handler classification; UMA / NUMA /COMA; Loosely coupled / tightly coupled; Classification based grain size and Instruction level parallelism.

UNIT-II

Interconnection Network: Need of Interconnection Network; Concept Bandwidth Nod degree diameter bisection bandwidth, In degree and Out degree; Static and Dynamic Interconnection network; Omega, Parallel Shifter, Bens, permutation, hypercube, butterfly; Shuffle exchange Network

Parallel Computer Architecture: Introduction to various computer architecture; Pipeline processing; Vector / Array processing; VLIW and Super scalar architecture; Associative architecture -Multithreaded architecture.

UNIT-III

Parallel Algorithm & Parallel Programming

Parallel Algorithm: Introduction to Parallel Algorithms; Analysis of Parallel Algorithms; Different models of computation- Combinational circuit, Permutation Circuit, Sorting circuit, Matrix computation.

PRAM Algorithms: Message passage programming -Shared memory, Message passing libraries, Data Parallel programming; Data Structures for parallel algorithms-Link list, Arrays

pointers, Hypercube network.

Parallel Programming: Introduction to Parallel Programming; Types of parallel programming - Programming based on message passing, data parallelism, Programming for shared memory systems, Example programs for parallelsystems.

UNIT- IV

Advanced Topics

Operating System for Parallel Computers: Basic issues of Operating Systems for Parallel Computers; Process Management; Resource Management; Memory management; I/O Management; Inter-Processor Communication; Vectorisation Compiler

Performance Evaluation: Introduction to performance evaluation; Metric of Parallel overhead; Law Speedup; Measurement Tools

Recent Trends: Multicomponent CPU; Apex architecture IA 64; Hyperthreading

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Advanced Computer Architecture: Parallelism, Scalability, Programmability	Hwang, K	Tata McGraw Hills
2	Introduction to Parallel Processing	Sasikumar M., Shikhare, D., Ravi Prakash	Prentice Hall of India pvt.ltd. New Delhi
3	Computer Architecture and Parallel Processing	Hwang, K., Briggs, F. A.	McGraw Hill

Course Code	CSE519
Course Title	Advanced Data Structure Programming Laboratory
Type of Course	PC
L T P	0 0 2
Credits	1
Course Prerequisites	Any high level programming language, basics of data structure
Course Objectives	This course helps the students to understand the various advance topics of data structure and its implementation.
Course Outcomes (CO)	The learner will be able to- 1. Implement various operations in arrays 2. Implement various operation in stack and queue 3. Implement sorting algorithms

SYLLABUS

List of Practical's

1. **Array:** Implement various operations in Arrays
2. **Linked List:** Implement Insertion and Deletion algorithms of single ended and double ended linked list
3. **Stack:** Implement Insertion and Deletion operation in Stack
4. **Queue, Deques & Circular Queues:** Implement Insertion and Deletion algorithm
5. **Min Heap:** Implement Insertion and Deletion algorithms
6. **AVL Tree:** Implement Insertion and Deletion algorithms with appropriate rotations
7. **B-Tree:** Implement Insertion and Deletion algorithms
8. **Quick Sort:** Implement quick sort algorithms
9. **Greedy algorithm:** Implement greedy algorithm
10. Knapsack using Dynamic Programming

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Data structures, Algorithms and Applications in Java	S. Sahni	Universities Press
2	Data structures and Algorithms in Java	Adam Drozdek	Cengage learning
3	Data Structures, Algorithms and Applications in C++	Sartaj Sahni	Tata McGraw Hill
4	Data Structures using C and C++	Tenenbaum, Augenstein, &Langsam	Prentice Hall of India

Course Code	CSE521
Course Title	Advanced Distributed System Laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Basic knowledge of Distributed Networks
Course Objectives	<ul style="list-style-type: none"> ➤ Basic concepts of middleware, states of art middleware technology and middleware services like RMI, CORBA,DCOM and EJB. ➤ To understand scheduling in distributed operating systems, fault tolerance, real-time distributed systems, and designing of distributed file systems.
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Understand the client server based program 2. Implement Mutual Exclusion algorithms 3. Demonstrate process or code migration

SYLLABUS

List of Practical's

1. To study Client Server based program using RPC.
2. To study Client Server based program using RMI.
3. To Study Implementation of Clock Synchronization (logical/physical).
4. To Study Implementation of Election algorithm.
5. To study Implementation of Mutual Exclusion algorithms.
6. To write Program multi-threaded client/server processes.
7. To write Program to demonstrate process/code migration.
8. Write a distributed application using EJB.
9. Write a program using CORBA to demonstrate object brokering.

Course Code	CSE523
Course Title	Network Technology and Security laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Basic Knowledge of Computer Networks and Security Techniques
Course Objectives	Learners will be able to understand concepts used in network design and the need to secure data travelling across the network.
Course Outcome (CO)	The learner will be able to-
	1. Understand the concepts of confidentiality, availability and integrity (CIA) in context of information assurance.
	2. Handle configuring host and network level technical security controls to include host firewalls, user access controls, intrusion detection, prevention and encryption at all levels
	3. Describe the hardware, software and services that comprise an enterprise network.
	4. Articulate integration of components to form a network solution

SYLLABUS

List of Practical's

- 1) Specifications, familiarizations of Networking Components and devices.
 Specifications of Laptop and Computer
 Familiarizations of Networking components and devices, LAN Adapter, HUB, Switches
- 2) Transmission Media and Tools, and Preparing Cables
 Coaxial Cables, UTP Cable
 Preparing Straight cables and Cross cables
- 3) Study of Topology and TCP/IP protocol
 Study of LAN Topology & Creation using N/W devices, Cables & Computers
 Configuration of TCP/IP Protocol in Windows & Linux
- 4) Addressing, File, Printer Sharing.
 Implementation of File & Printer Sharing.
 Designing & implementation of class A, B, C Networks
- 5) Subnet Planning, FTP Server, TCP/UDP
 Subnet planning and implementation
 Installation of FTP Server & Client
- 6) Network Security: Network Concepts, Threats in Networks, Network Security Controls.
- 7) Web Security: Web Security Requirements, Secure Socket Layer (SSL), Transport Layer Security (TLS), Secure Electronic Transaction (SET).
- 8) Electronic Mail Security: Threats to E-Mail, Requirements and Solutions, Encryption for Secure E-Mail, Secure E-Mail System.
- 9) Firewalls: Firewalls- Types, Comparison of Firewall Types, Firewall Configurations.

Course Code	CSE527
Course Title	Adhoc Networking laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Basic concepts of Computer Networks, Wireless Networks
Course Objectives	This course enables students to design and implement a network using available tools.
Course Outcome (CO)	The learner will be able to- 1. Understand devices and equipments needed in installation of network 2. Describe configuration and installation of active directory. 3. Design a peer to peer Adhoc Wireless Network
SYLLABUS	
List of Practicals	
<ol style="list-style-type: none"> 1) Study of Devices and Equipments for The installation of a Network 2) To know how to install a Server Operating system. How to configure it. Installing Active Directory. 3) Dynamic IP addressing and Static 4) Testing the LAN by pinging. The use of the PING command 5) Making a peer to peer Adhoc Wireless Network 6) Exposure to Network simulator2(NS2) : Simulation Commands ,Drawing a Network Topology, Simulate the transmission of ping messages over a network topology 	

Course Code	CSE529
Course Title	Data Mining and Data Warehouse Technology Laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Basic concepts of Computer Networks, Wireless Networks
Course Objectives	This course enables students to design and implement a network using available tools.
Course Outcome (CO)	The learner will be able to- 1. Understand building of Data Warehouse 2. Describe classification of data sets 3. Perform clustering on data sets
SYLLABUS	
List of Practicals	
<ol style="list-style-type: none"> 1) Build Data Warehouse and Explore WEKA 2) Perform data preprocessing tasks and Demonstrate performing association rule mining on data sets. 3) Demonstrate performing classification on data sets. 4) Demonstrate performing clustering on data sets. 5) Demonstrate performing Regression on data sets 6) Beyond the Syllabus -Simple Project on Data Preprocessing 	

Course Code	CSE502
Course Title	Mathematical Foundation of Computer Science
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Basic concepts of Computer Networks, Wireless Networks
Course Objectives	<ol style="list-style-type: none"> 1. To understand the mathematical fundamentals that is prerequisites for a variety of courses like Data mining, Network protocols, analysis of Web traffic, Computer security, Software engineering, Computer architecture, operating systems, distributed systems, Bioinformatics, Machine learning. 2. To develop the understanding of the mathematical and logical basis to many modern techniques in information technology like machine learning, programming language design, and concurrency. 3. To study various sampling and classification problems.
Course Outcome (CO)	After completion of course, students would be able to: <ol style="list-style-type: none"> 1. To understand the basic notions of discrete and continuous probability. 2. To understand the methods of statistical inference, and the role that sampling distributions play in those methods. 3. To be able to perform correct and meaningful statistical analyses of simple to moderate complexity.

SYLLABUS

UNIT-I

Mathematical Logic : Statements and notations, Connectives, Well formed formulas, Truth Tables, tautology, equivalence implication, Normal forms.

Predicates : Predicative logic, Free & Bound variables, Rules of inference, Consistency, proof of contradiction, Automatic Theorem Proving.

UNIT-II

Set Theory : Properties of binary Relations, equivalence, compatibility and partial ordering relations, Hasse diagram. Functions: Inverse Function Comports of functions, recursive Functions, Lattice and its Properties, Pigeon hole principles and its application.

Algebraic structures : Algebraic systems Examples and general properties, Semi groups and monads, groups sub groups' homomorphism, Isomorphism.

UNIT-III

Elementary Combinatorics: Basis of counting, Combinations & Permutations, with repetitions, Constrained repetitions, Binomial CSEfficients, Binomial Multinomial theorems, the principles of Inclusion – Exclusion.

Recurrence Relation : Generating Functions, Function of Sequences Calculating CSEfficient of generating function, Recurrence relations, Solving recurrence relation by substitution and

Generating funds. Characteristics roots solution of In homogeneous Recurrence Relation.

UNIT-IV

Graph Theory : Representation of Graph, DFS, BFS, Spanning Trees, planar Graphs

Graph Theory and Applications, Basic Concepts Isomorphism and Sub graphs, Multi graphs and Euler circuits, Hamiltonian graphs, Chromatic Numbers

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Discrete and Combinational Mathematics- An Applied Introduction-5th Edition	Ralph. P.Grimaldi	PHI/Pearson Education
2	Discrete Mathematical Structures with applications to computer science	J.P. Trembly and P. Manohar	TMH, New York, 1997
3	Discrete Mathematics and its Applications	Kenneth H. Rosen, Fifth Edition	TMH, New York, 1997

Course Code	CSE504
Course Title	Object Oriented Analysis and Design Using UML
Type of Course	PC
L T P	3 0 0
Credits	3
Course Prerequisites	Basic knowledge of Software Analysis and Design and Software Engineering
Course Objectives (CO)	Students are made familiar with the tools to Create analysis and design diagrams, Describe how design patterns facilitate development and list several of the most popular patterns.

SYLLABUS

UNIT I

Object Oriented Design and Modeling: Object Oriented Fundamentals, Objects and object classes, object oriented design process, importance of modeling, principles of modeling, object oriented modeling.

Introduction to UML: Conceptual model of UML, building blocks of UML, Mechanisms in UML, architecture, software development life cycle.

UNIT II

Basic Structural Modeling: Classes, relationships, common mechanisms, class and object diagrams.

Advanced structural Modeling: Advanced classes, advanced relationships, Interfaces types and roles, packages, instances and object diagrams.

UNIT III

Collaboration Diagrams and Sequence Diagrams: Terms, concepts and depicting a message in collaboration diagrams. Terms and concepts in sequence diagrams. Difference between collaboration and sequence diagram. Depicting synchronous messages with/without priority call back mechanism.

UNIT IV

Basic Behavioral Modeling: Interactions use cases, Use Case Diagrams, Interaction Diagrams and activity diagrams.

Advanced Behavioral Modeling: Events and signals, state machines, process and threads, time and space, state chart diagrams.

Architectural Modeling: Terms, Concepts, examples, Modeling techniques for component diagrams and deployment diagrams.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	The Unified Modelling Language User Guide	GrandyBooch, James Rumbough, Ivar Jacobson	Pearson Education
2	Object-oriented Software Engineering: Using UmL, Patterns and Java	Bernd Bruegge , Allen H. Dutoit	Pearson
3	Object Oriented Analysis and Design Using UML	D. Jeya Mala & S. Geetha	Tata Mc-Graw Hill

Course Code	CSE506
Course Title	Soft Computing Technology
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Basic concepts of Computer Networks, Wireless Networks
Course Objectives	This course enables students to design and implement a network using available tools.
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Comprehend the fuzzy logic and the concept of fuzziness involved in various systems and fuzzy set theory. 2. Understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic. 3. Understand the fundamental theory and concepts of neural networks, Identify different neural network architectures, algorithms, applications and their limitations. 4. Understand appropriate learning rules for each of the architectures and learn several neural network paradigms and its applications.
SYLLABUS	

Unit-I

FUZZY LOGIC

Fuzzy Set Theory: Basic Definition and Terminology, Set Theoretic Operations, MF Formulation and Parameterization, MF of two dimensions, Fuzzy Union, Intersection and Complement.

Unit -II

Fuzzy Rules and Fuzzy Reasoning: Extension Principles and Fuzzy Relations, Fuzzy IF THEN Rules, Fuzzy Reasoning.

Unit-III

Swarm Optimization- Particle Swarm Optimization, Ant Code Optimization

Fundamentals of Genetic Algorithms: Basic Concepts Creation, Offspring's Encoding, Fitness functions, Reproduction, Genetic Modelling: Inheritance Operators, Cross over, Inversion and detection, Mutation operator, Bitwise operators.

Unit-IV

ARTIFICIAL NEURAL NETWORKS- Introduction, Architecture, Back Propagation and feed

Forward Networks, Offline Learning, Online Learning.

Supervised Learning of Neural Networks: Introduction, Perceptron's, Adaline, Back Propagation Multilayer Perceptron's, Back Propagation Learning Rules.

Unsupervised Learning : Competitive Learning Networks, Kohonen self-organizing networks, Hebbian Learning, The Hopfield Network

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Neuro-Fuzzy and Soft Computing	. J.S.R. Jang, C.T.Sun and E.Mizutani	PHI/Pearson Education, New Delhi , 2004
2	Fuzzy Logic with Engineering Applications	T. J. Ross	TMH, New York, 1997

Course Code	CSE510
Course Title	Database Design & Management system
Type of Course	PC
L T P	3 0 0
Credits	3
Course Prerequisites	Basic knowledge of Database and relational database management system
Course Objectives	This course is intended to provide an understanding of the current theory and practice of database management systems, a solid technical overview of database management systems. In addition to technical concerns, more general issues are emphasized. These include data independence, integrity, security, recovery, performance, database design principles and database administration.
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Explain the features of database management systems and Relational database. 2. Analyze the existing design of a database schema using ER diagrams and apply concepts of normalization to design an optimal database. 3. Identify the need of Concurrent transactions and locking and explain their types, advantages and disadvantages 4. Formulate query, using SQL, solutions to a broad range of query and data update problems. 5. Explain Spatial and Multimedia databases

SYLLABUS

UNIT I

Introduction : Introduction to DBMS, RDBMS, Types of DBMS and their advantages and disadvantages, Types of relational query language, E-R Diagram, Keys, Normalization, Query optimization

Transaction Processing and Concurrency Control: Transaction Management, Concurrency Control and Serializability; Recoverability and Strictness; Two-phase locking, Multiple Granularity, Timestamp based Protocol.

Database protection in RDBMS –Integrity, Availability

UNIT II

Distributed Databases: Basic concepts, structure, trade-offs Methods of data distribution – fragmentation, replication, design & advance concepts of DDBMS like Two-phase commit protocol, distributed transaction, distributed concurrency control, distributed deadlock handling.

Introduction to object oriented databases: Object Oriented Data model, Object Oriented Database Management System, Object Query Language, Object Oriented Relational Database Management System and its concepts.

UNIT III

Data warehousing Concepts: Architecture, Dataflows, Tools & Technologies, Data Marts, Data Mining & Online Analytical Processing.

UNIT IV

Emerging Database Technologies: Spatial & Multimedia databases, Mobile Computing & Mobile Databases

New Topics and Applications: (a) Information Retrieval (b) Bioinformatics (c) Incomplete and Uncertain Databases (d) Non-relational Databases, (e) Data Stream Management

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Advanced database management system	Rini Chakrabarti, Shilbhadra Dasgupta	Wiley India Pvt. Ltd.
2	Distributed Databases	Ozsu and Valduriez	Pearson Education
3	Advanced Database Management System	Vaishali P. Yadav	Pearson Education India
4	Database System Concepts	Abraham Silberschatz, Henry F. Korth, S. Sudarshan	Tata McGraw-Hill
5	Database Management Systems	Raghu Ramakrishnan	Mc-Graw Hill

Course Code	CSE512
Course Title	Advanced and Distributed Operating System
Type of Course	PE
L T P	4 0 0
Credits	4
Course Prerequisites	Basics of Operating system and knowledge of networking
Course Objectives (CO)	This course work helps to learn the fundamentals of Operating Systems, to gain knowledge on Distributed operating system concepts that includes architecture, Mutual exclusion algorithms, Deadlock detection algorithms and agreement protocols and to gain insight on to the distributed resource management components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols.

SYLLABUS

UNIT I

Overview of Synchronization Mechanisms –Processes and Threads, Process Scheduling, Deadlocks: Detection, Prevention and Recovery, Models of Resources Memory Management Techniques.

Distributed operating systems: Issues in Distributed Operating System, Architecture, Communication primitives, Lamport's Logical clocks, Causal Ordering of Messages, Distributed Mutual Exclusion Algorithms, Centralized and Distributed deadlock Detection Algorithms, Agreement Protocols.

UNIT II

Distributed Resource Management: Distributed File Systems, Design Issues, Distributed Shared Memory, Algorithms for Implementing Distributed Shared memory, Issues in Load Distributing, Scheduling Algorithms, Synchronous and Asynchronous Check Pointing and Recovery, Fault Tolerance, Two-Phase Commit protocol, Non blocking Commit Protocol, Security and Protection.

UNIT III

Real Time and Mobile Operating Systems: Basic Model of Real Time Systems, Characteristics, Applications of Real Time Systems, Real Time Task Scheduling, Handling Resource Sharing, Mobile Operating Systems, Micro Kernel Design, Client Server resource Access, Processes and Threads, Memory Management, File system.

UNIT IV

Case Studies: Linux System: Design Principles, Kernel Modules, Process Management scheduling, Memory Management, Input-Output Management, File system, Inter process Communication. iOS and Android: Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System.

RECOMMENDED BOOKS

Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Advanced Concepts in Operating Systems –Distributed, Database, and Multiprocessor Operating Systems	MukeshSinghal and Niranjan G. Shivaratri	Tata McGraw-Hill
2	Operating System Concepts	Abraham Silberschatz; Peter Baer Galvin; Greg Gagne	John Wiley & Sons
3	Understanding the Linux kernel	Daniel P Bovet and Marco Cesati	O'Reilly

4	Real-Time Systems: Theory and Practice	Rajib Mall	Pearson Education India
5	iPhone iOS 4 Development Essentials –Xcode	Neil Smyth	Payload media

Course Code	CSE514
Course Title	Natural Language Processing
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	To be a knowledge of Grammar Rules and Artificial Intelligence concepts
Course Objectives	NLP attempts to interact with humans and human texts via language. Problems in the domain include analyzing texts to discover structures and to make decisions. Translating from one language to another. Interacting with humans in dialogue systems or cooperative tasks.
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. The student will apply core computer science concepts and algorithms, such as dynamic programming. 2. The student will apply the methods to new NLP problems and will be able to apply the methods to problems outside NLP. 3. The student will be familiar with some of the NLP literature and will read and suggest improvements to published work. The student will see where opportunities for research await and prepare to conduct research in NLP or related fields.

SYLLABUS

UNIT-I

Basics of NLP: Introduction, Application of Natural Language, Various areas of NLP

Understanding NLP Models: Identifying the task, selecting a Model, Building and training a Model, Verifying the Model, Using the Model.

Understanding Part of Speech or Text Processing: Tokenization, Sentence segmentation or Splitting, Normalization.

UNIT-II

POS Tagging: Introduction, Word Classes, Rule Based POS, Stochastic POS, Markov assumption, Markov chain, HMM Tagging, Issues of Ambiguity, Multiple tags, Multiple words and unknown words.

Words and Word Forms : Morphology fundamentals; Morphological Diversity of Indian Languages; Morphology Paradigms; Finite State Machine Based Morphology; Automatic Morphology Learning; Shallow Parsing; Named Entities; Maximum Entropy Models; Random Fields.

UNIT-III

Semantics: Introduction, Semantical Analysis, Lexical Semantics.

Machine Translation: Introduction, Different methods of MT.

Speech Processing: Issues in Speech Recognition, the Sound Structure of Language, Signal Processing, Speech Recognition, Prosody and Intonation.

UNIT-IV

Structures: Theories of Parsing, Parsing Algorithms; Robust and Scalable Parsing on Noisy Text as in Web documents; Hybrid of Rule Based and Probabilistic Parsing; Scope Ambiguity and Attachment Ambiguity resolution.

Text/Reference Books:

S. No	Name	Author(S)	Publisher
1.	Speech and Language Processing	D. Jurafsky and J. Martin	Pearson Education
2.	Natural Language Understanding	James Allen	Pearson Education
3.	Natural Language processing: A Paninian Perspective	Bharati A., Chaitanya V and Sangal R,	Prentice Hall of India

Course Code	CSE516
Course Title	Machine Learning with python
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Discrete mathematics
Course Objectives	<ol style="list-style-type: none"> 1. To learn the concept of how to learn patterns and concepts from data without being explicitly programmed in various IOT nodes. 2. To design and analyse various machine learning algorithms and techniques with a modern outlook focusing on recent advances. 3. Explore supervised and unsupervised learning paradigms of machine learning. 4. To explore Deep learning technique and various feature extraction strategies.
Course Outcome (CO)	<p>After completion of course, students would be able to:</p> <ol style="list-style-type: none"> 1. Extract features that can be used for a particular machine learning approach in various IOT applications. 2. To compare and contrast pros and cons of various machine learning techniques and to get an insight of when to apply a particular machine learning approach. 3. To mathematically analyse various machine learning approaches and paradigms.

SYLLABUS

UNIT I

Supervised Learning (Regression/Classification)

- Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes
- Linear models: Linear Regression, Logistic Regression, Generalized Linear Models
- Support Vector Machines, Nonlinearity and Kernel Methods
- Beyond Binary Classification: Multi-class/Structured Outputs, Ranking

UNIT II

Unsupervised Learning

- Clustering: K-means/Kernel K-means
- Dimensionality Reduction: PCA and kernel PCA
- Matrix Factorization and Matrix Completion
- Generative Models (mixture models and latent factor models)

UNIT III

Evaluating Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble Methods (Boosting, Bagging, Random)

UNIT IV

Sparse Modeling and Estimation, Modeling Sequence/Time-Series Data, DeepLearning and Feature Representation Learning

UNIT V

Scalable Machine Learning (Online and Distributed Learning)

A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Pattern Recognition and Machine Learning	Bishop, C.	Berlin: Springer-Verlag.
2	Elements of Statistical Learning	Hastie, Tibshirani, and Friedman	Springer
3	Machine Learning	Tom Mitchell	Mc-Graw Hill

Course Code	CSE 518
Course Title	Image Processing using Matlab
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Sufficient background in Probability and knowledge of computer algorithms
Course Objectives (CO)	This course will explore the algorithms and techniques involved in Digital Image Processing using computational tools. The course will comprise of comprehensive understanding of digital imagery and digital image processing
Course Outcome (CO)	The learner will be able to- <ol style="list-style-type: none"> 1. Understand the need for image transforms different types of image transforms and their properties. 2. Develop any image processing application. 3. Understand the rapid advances in machine vision. 4. Learn different techniques employed for the enhancement of images.

SYLLABUS

UNIT-I

Introduction to Image Processing: Definition, Examples of Fields that use Digital Image Processing, Fundamental Steps in Digital Image Processing, Components of an Image Processing System.

Digital Image Fundamentals: Image Sensing, and Acquisition, Image Sampling and Quantization, Basic Relationship between Pixels, Distance Measures, Linear and Non-linear Operations.

UNIT-II

Image Enhancement in Spatial Domain: Basic Gray Level Transformations, Histogram Processing, Enhancements using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing, Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods.

Image Restoration : Noise Models, Restoration in the Presence of Noise Only-Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Constrained Least Squares Filtering, Geometric Mean Filter, Geometric Transformations.

UNIT-3

Color Image Processing: Color Models, Pseudo color Image Processing, Basics of Full Color Image Processing. Color Transformations, Smoothing and Sharpening. Color Segmentation.

Unit 4: Image Compression: Image Compression Models, Huffman coding, Golomb Coding, Arithmetic coding, LZW coding, Run Length coding, Bit-Plane coding, Block Transformcoding, wavelet coding.

Image Segmentation: Point Detection, Line Detection and Edge Detection, Edge Linking and Boundary Detection, Thresholding, Region Based Segmentation

RECOMMENDED BOOKS

Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Digital Image Processing	Gonzalez and Woods	Addison Wesley
2	Digital Image Processing and Pattern	Pakhera Malay K	PHI
3	Digital Image Processing	Jayaraman and Veerakumara	Mc-Graw Hill
4	Computer Vision A Modern Approach	Forsyth and Ponce	Pearson Education

Course Code	CSE520
Course Title	Advanced Software Engineering
Type of Course	PE
L T P	3 0 0
Credits	3
Course Prerequisites	Basics of software principles and software engineering
Course Objectives (CO)	The advanced software engineering curriculum prepares students for a career in reliable, economical software development.
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Define various software application domains and remember different process models that are used in software development. 2. Explain the need of software specifications. Moreover, they can classify different types of software requirements and their gathering techniques. 3. Convert the requirements model into the design model and demonstrate use of software and user interface design principles. 4. Distinguish between SCM and SQA and can also able to classify different testing strategies and statics.

SYLLABUS

UNIT I

Introduction: Life cycle models, Requirement Analysis and specification, Formal requirements specification.

UNIT II

Fundamental issues in software design: Goodness of design, cohesions, coupling. Function-oriented design: structured analysis and design. Overview of object –oriented concepts.

Unified Modeling Language (UML), Unified design process. User interface design. Coding standards and guidelines. Code walkthrough and reviews.

UNIT III

Unit testing, Black box and white box testing. Integration and system testing. Software quality and reliability.

SEI CMM and ISO 9001. PSP and Six Sigma. Clean room technique.

UNIT IV

Software maintenance issues and techniques, Software Reengineering, Software reuse. Client-Server software development.

RECOMMENDED BOOKS

Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Software Engineering	I. Sommerville	Addison-Wesley P
2	The Mythical Man-Month	F. Brooks	Addison-Wesley
3	Schaum's Outline of Software Engineering	D. Gustafson	McGraw-Hill

Course Code	CSE508
Course Title	Object Oriented Analysis and Design Using UML Laboratory
Type of Course	PC
L T P	0 0 2
Credits	1
Course Prerequisites	Basic knowledge of Software Analysis and Design and Software Engineering
Course Objectives (CO)	Students are made familiar with the tools to Create analysis and design diagrams, Describe how design patterns facilitate development and list several of the most popular patterns.
Course Outcomes	The learner will be able to- CO1: Formulate problem statement CO2: Develop SRS document CO3: Design Use case model and UML Class diagram CO4: Design UML activity diagram, Interaction and State Chart Diagram

SYLLABUS

To develop a mini-project following the 12 exercises listed below:

- To develop a problem statement
- Develop an IEEE standard SRS document. Also develop risk management and project plan (Gantt chart).
- Identify Use Cases and develop the Use Case model.
- Identify the business activities and develop an UML Activity diagram.
- Identify the conceptual classes and develop a domain model with UML Class diagram.
- Using the identified scenarios find the interaction between objects and represent them using UML Interaction diagrams.
- Draw the State Chart diagram
- Identify the User Interface, Domain objects, and Technical services. Draw the partial layered, logical architecture diagram with UML package diagram notation.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	The Unified Modelling Language User Guide	GrandyBooch, James Rumbough, Ivar Jacobson	Pearson Education

Course Code	CSE522
Course Title	Database Design and Management System Laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Database management system
Course Objectives (CO)	This course offers a good understanding of emerging database technologies and prepares students to be in a position to design databases in variety of technologies.
Course Outcome (CO)	The learner will be able to- 1. Formulate and analyze problem statement 2. Identify the need of design and normalization 3. Design a database using ER diagrams and integrity constraints 4. Implement a database which ensures data security norms

SYLLABUS

Students are required to develop a project using concepts of database using following concepts:

- Basic SQL
- ER Modeling
- Database Design and Normalization.

The students are also required to submit the synopsis during semester and final report at the end of semester. The evaluation will be done on the basis of project submitted.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Advanced database management system	RiniChakrabarti, Shilbhadra Das Gupta	Wiley India Pvt. Ltd.
2	Database System Concepts	Abraham Silberschatz, Henry F. Korth, S. Sudarshan	Tata McGraw-Hill
3	Database Management Systems	Raghu Ramakrishnan	Mc-Graw Hill

Course Code	CSE524
Course Title	Advanced and Distributed Operating System Laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Operating System
Course Objectives (CO)	This course focuses on concepts of relevant to operating system design and implementation. Major concepts of interprocess communication, environment variables and command history.
Course Outcomes	The learner will be able to- CO1: Write programs in Unix Operating system CO2: Write program for Multiprocessing Operating System CO3: Implement Memory Management schemes

SYLLABUS

Programs to be implemented :

- 1) Write programs using the I/O System calls of UNIX operating system (open, read, write, etc.).
 - 2) Develop application using Inter-Process Communication (using shared memory, pipes or message queues)
 - 3) Write program for Multiprocessor OS implementing Semaphores
 - 4) Implement the Producer-Consumer problem using semaphores (using UNIX system calls)
 - 5) Write program for Multiprocessor OS implementing Multithreading
 - 6) Develop a program for controlling accessing pool of programs and resources.
 - 7) Implement Memory management schemes like paging and segmentation.
 - 8) Implement Memory management schemes like First fit, Best fit and Worst fit.
 - 9) Implement any file allocation techniques (Contiguous, Linked or Indexed).
-

Course Code	CSE528
Course Title	Machine Learning using python Laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Basic concepts of Theory of Computation and Data mining
Course Objectives	This course objective is to introduce students with goals and applications of Machine learning tools
Course Outcomes (CO)	The learner will be able to- <ol style="list-style-type: none">1. Identify solution for a problem using machine learning techniques2. Solve the problem using identified machine learning technique.3. Apply Dimensionality reduction techniques.4. Design application using python.

List of Practicals

1. Python program to add two numbers
2. Python Program for factorial of a number
3. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
4. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
5. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
6. Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.
7. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
8. Assuming a set of documents that need to be classifier

Course Code	CSE530
Course Title	Image Processing using Matlab Laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Basic concepts of Theory of Computation and Data mining
Course Objectives	This course objective is to introduce students with basics of NLP which will empower them for developing advanced NLP tools and solve practical problems in field.
Course Outcomes (CO)	<p>The learner will be able to:</p> <ol style="list-style-type: none"> 1. Understand the need for simulation/implementation for the verification of mathematical functions. 2. Understand the main features of the MATLAB/SCILAB program development environment to enable their usage in the higher learning. 3. Implement simple mathematical functions/equations in numerical computing environment such as MATLAB/SCILAB. 4. Interpret and visualize simple mathematical functions and operations there on using plots/display

List of experiments

1. Learning and implementing basic MATLAB commands- Read and Display an image, adding, subtracting, multiplying images, adding a colorbar, image resizing, image rotation, extracting pixel values, edge detection, .
2. Write a program in matlab to Read and display the image from file
3. Write a function in matlab that will take a color image as input and will return a grayscale image.
4. Write a program in MATLAB to plot line through 2 points
5. Write a program to Display histogram of an image using MATLAB library function
6. Write a program in Matlab that will take a grayscale or an RGB image as input and will return a binary image as output
7. Write a Matlab program to complement colors of a gray scale image
8. Write a Program to dilate an image
9. Write a Program to perform erosion of an image
10. Write a program in matlab to display the red, green and blue color planes of a color image

Course Code	CSE532
Course Title	Advanced Software Engineering Laboratory
Type of Course	PE
L T P	0 0 2
Credits	1
Course Prerequisites	Basic concepts of Theory of Computation and Data mining
Course Objectives	This course objective is to introduce students with basics of CASE tools which will empower them for developing solutions to various problem statements using software development life cycle.
Course Outcomes (CO)	The learner will be able to- 1. Study and use CASE tools. 2. Develop and design software requirement specification for an identified problem statement. 3. Check feasibility of the identified solution and draft project plan using Gantt Chart 4. Calculate complexity and develop UML diagrams for the identified problem statement .

From the given below list of projects choose any one to perform the experiments given below-

Experiments:

1. Study and Usage of an Design Phase CASE tool (Smart Draw, Visual Paradigm)
2. Develop Problem Statements and Understand Software Requirement Specifications with Case Study.
3. Develop an IEEE standard SRS document for the given project.
4. Study and Usage of software to draft a project plan (Gantt Chart)
5. Identify Use Cases and develop Use Case model.
6. Identify Conceptual Classes and develop an UML Class diagram.
7. Identify business activities and develop an UML Activity diagram
8. Draw State Chart Diagram.
9. Using the identified scenarios find the interaction between objects and represent those using interaction diagram.
10. Draw the Sequence diagrams and Collaboration Diagram.
11. Draw Component diagram.
12. Draw Deployment diagram.
13. Study and Usage of software to track the progress of a project and develop risk management.
14. Develop Mini-Projects using UML.

LIST OF PROJECTS:-

1. Hospital Management system.

2. Airport Check-in System.
3. Exam Registration.
4. Stock maintenance system.
5. Course Management system.
6. Railway Reservation System.
7. Human Resource management system.
8. Credit card processing.
9. Tour management system.
10. Restaurant system.
11. Car Rental system.
12. Virtual Classroom.
13. Hotel Management System.
14. Bank ATM System.
15. Online Shopping.
16. Library Management System.
17. Online Examination System.
18. Online Mobile Recharge.
19. Ordering Book System
20. Shop Management System.

Third Semester

Course Code	CSE601
Course Title	Cryptography and Information Security
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Basic knowledge of computer networks, error correction and detection.
Course Objectives	To make students familiar with information security, critical concepts of information security, Enumerate the phases of the security systems development life cycle. Describe the information security roles of professionals within an organization
Course Outcome (CO)	The learner will be able to- <ol style="list-style-type: none"> 1. Understand critical concepts of information security. 2. Enumerate the phases of the security systems development life cycle. 3. Describe the information security roles of professionals with in an organization 4. Develop counter measures to provide a threat free system

SYLLABUS

Unit 1: Introduction: Information Security: Introduction, History of Information security, What is Security, CNSS Security Model, Components of Information System, Balancing Information Security and Access, Approaches to Information Security Implementation, The Security Systems Development Life Cycle.

Unit 2: Symmetric Key/Asymmetric Key Cryptography: Concepts and Techniques, symmetric and asymmetric key cryptography, steganography, Symmetric key Ciphers: DES structure, DES Analysis, Security of DES, variants of DES, Block cipher modes of operation, AES structure, Analysis of AES , Key distribution. Asymmetric key Ciphers: Principles of public key cryptosystems, RSA algorithm, Analysis of RSA, Diffie-Hellman Key exchange.

Unit 3: Message Authentication and Hash Functions: Authentication requirements and functions, MAC and Hash Functions, MAC Algorithms: Secure Hash Algorithm, Whirlpool, HMAC, Digital signatures, X.509, Kerberos.

Unit 4: Security at layers(Network, Transport, Application):IPSec, Secure Socket Layer(SSL), Transport Layer Security(TLS), Secure Electronic Transaction(SET), Pretty Good Privacy(PGP), S/MIME .

Intruders, Virus and Firewalls: Intruders, Intrusion detection, password management, Virus and related threats, Countermeasures, Firewall design principles, Types of firewalls.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Principles of Information Security	Michel. E Wittman, Herbert J.Mattord	CENGAGE Learning
2	Cryptography and Network Security- Principles and Practices	Williams Stallings	PHI
3	Cryptography and Network Security	B.A Forouzan	Mc-Graw Hill
4	Computer Networks	Tanenbaum	Pearson Education

Course Code	CSE603
Course Title	Cloud Computing Technology
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Knowledge of networking, server technology etc.
Course Objectives	This course work provides the complete understanding of Cloud System architecture, its implementation techniques and its various applications in the field of computer science.
Course Outcome (CO)	The learner will be able to- 1. Understand the importance of cloud computing 2. List characteristics of cloud computing 3. Describe different types of cloud 4. Explain architecture of cloud computing

SYLLABUS

UNIT-I

Cloud Computing Basics, History of Cloud Computing, Importance, Characteristics of Cloud Computing, Benefits and challenges to Cloud architecture.

UNIT-II

Types of Cloud: Public Cloud, Private Cloud, Hybrid and Community Cloud. Differences between public and private cloud, Status of Cloud Computing in India, Cloud Service Models, Role of virtualization in enabling the cloud; Differences between Grid computing and cloud computing, differences between grid computing and utility computing, Cloud Computing security concerns and proposed security model for future cloud computing.

UNIT-III

Cloud Computing- Logical architecture, Developing Holistics Cloud Computing Reference Models- Seven step model of migrating to cloud.

Virtualization types, Virtual Machine Life Cycle, Virtualization applications, Pitfalls of Virtualization, CPU Virtualization.

UNIT-IV

Case Study of Cloud Computing, Cloud Computing Risks. Cloud Tools, Cloud Applications, Future Trends, Mobile cloud, Jungle Computing, Big Data –Features and applications.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Cloud Computing Bible	Sosinsky B	Wiley India
2	Cloud Computing : Principles and Paradigm	Buyya R., Broberg J., Goscinski A.	John Wiley & Sons
3	Cloud Computing – A practical Approach	Velte T., Velte A., Elsenpeter R.	Tata McGrawHill.
4	Cloud Computing and SOA Convergence in Enterprise	Linthicum D.	Pearson Education India.

Course Code	CSE605
Course Title	Research Methodology
Type of Course	PC
L T P	4 1 0
Credits	5
Course Prerequisites	Basic knowledge of mathematical concepts
Course Objectives	The course aims at equipping students with an understanding of the research process, tools and techniques in order to facilitate managerial decision making.
Course Outcomes (CO)	<p>At the end of this course, students will be able to</p> <ol style="list-style-type: none"> 1. Understand research problem formulation. 2. Analyze research related information 3. Follow research ethics 4. Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity. 5. Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular. 6. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

SYLLABUS

Unit 1

Introduction to Research: Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations.

Unit 2

Sources Of Data: Primary And Secondary; Data Collection Methods; Questionnaire Designing: Construction, Types And Developing A Good Questionnaire. Sampling Design and Techniques, Scaling Techniques, Meaning, Types, Data Processing Operations, Editing, Coding, Classification, Tabulation.

Unit 3

Effective review of literature in research, analysis, Plagiarism tool, Research process, Research design
Effective technical writing, how to write report, how to write paper for journals and conferences

Unit 4

Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Business Research Methods	D R. Cooper, & P.S,Schindler	Tata McGraw Hill
2	An Applied Orientation	N. Malhotra, and S.,Dash, Marketing Research	Pearson Education
3	Research Methodology: Methods & Techniques	C.R,Kothari	New Age International Publishers
4	SPSS Explained	Hiolton, Brownlow McMurray,Cozens	Tata McGraw Hill
5	Business Research Methods	Willian G.Zikmund	Thomson South-Western Learning
6	SPSS for Windows Step by Step	Darren George & Paul Mallery	Pearson Education
7	Marketing Research	Churchill & Israel	Cengage Learning
8	Marketing Research: Text & Cases	RajendraNargundka	Tata McGraw Hill
9	Business Research Methodology	Srivastava and Rego	Tata Mc Graw Hill
10	Essentials of Marketing Research	Zikmund	Cengage Learning

Course Code	CSE607
Course Title	Research and Publication Ethics
Type of Course	PC
L T P	2 0 0
Credits	2
Course Prerequisites	Basic knowledge of mathematical concepts
Course Objectives	The course aims at equipping students with an understanding of the research process, tools and techniques in order to facilitate managerial decision making.
Course Outcomes (CO)	At the end of this course, students will be able to <ol style="list-style-type: none"> 1. Analyze research related information 2. Follow research ethics 3. Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.

SYLLABUS

UNIT-I

Philosophy and Ethics-

Introduction to Philosophy- Definition, Nature and Scope, Concept, Branches

Ethics- Definition, Moral philosophy, Nature of moral judgements and reactions.

UNIT-II

Scientific Conduct: Ethics with respect to science and research, Intellectual honesty and research integrity

Scientific Misconducts: Falsification, Fabrication and Plagiarism (FFP), Redundant publications- Duplicate and overlapping publications, Selective reporting and misrepresentation of data.

UNIT-III

Publication Ethics: Definition, Introduction and importance, Best Practices or standards setting initiatives and guidelines: COPE, WAME etc, Conflicts of Interest

Publication Misconduct- definition, concept, problems that lead to unethical behavior and vice-versa, types Violation of publication ethics, authorship and contributorship, Identification of publication , misconduct, complaints and appeals, Predatory publishers and journals

UNIT-IV

Open Access Publishing-

Open Access publications and initiatives, Journal Finder/Journal suggestion tools. Use of plagiarism softwares- Urkund, Turnitin

Course Code	CSE609
Course Title	Application of ICT tools in Computer Research
Type of Course	Audit Course
L T P	2 0 0
Credits	NC
Course Prerequisites	Nil
Course Objectives	<ul style="list-style-type: none"> • Identify appropriate information sources • critically analyse information • research effectively • manage information • use the information to extend and communicate knowledge across subject fields
Course Outcome (CO)	<p>Students will be able to</p> <ul style="list-style-type: none"> • identify appropriate information sources • critically analyse information • research effectively • manage information • use the information to extend and communicate knowledge across subject fields

SYLLABUS

UNIT-I

- a) What is the need of online tools for researchers?
- b) ICT application in pre-data analysis,
 - i. Article Availability
 - ii. Thesis and Dissertation Availability
 - iii. Literature Search- Shodh Ganga, Google scholar
 - iv. Content Search
 - v. Literature Tracking
 - vi. Quantitative Data Collection
 - vii. Qualitative Data Collection
 - viii. Big Data and Its Analytics
- c) ICT application in data analysis
 - i. Quantitative Data Analysis
 - ii. Qualitative Data Analysis
- d) ICT application in post-data analysis.
 - i. References and Bibliography Compilation
 - ii. Article and Thesis / Dissertation's Discussion among Researchers, Supervisors, Supervises and during Viva Voce

- e) Plagiarism Detection
- f) Journal Manuscripts Submission

UNIT-II

- i. Search Engine & Research Papers, Shared Dataset and Code, Connect & Communicate with experts & researchers, Free Digital Library
- ii. Simulation/Lab and project management –
 - a. Designing tools-
 - 1. Unified Modelling language and tools used- Smart Draw, Visual studio
 - 2. Virtual Labs
 - b. Engineering tools- Matlab
 - Introduction to Matlab:** Matlab as {best} calculator, Standard Matlab windows, Operations with variables - Naming, checking existence, Clearing, Operations. Familiarize Command Window, History, Workspace, Current Directory, Figure window, edit window, Shortcuts, Help files
 - Arrays:** Columns and rows: creation and indexing, Size & length, Multiplication, division, Power, Operations.
 - Control Structures:** For loops, While, If control structures, Switch, Break, Continue statements
 - c. Programming tools-
 - 1. Web based technology
 - 2. Java based technology
 - d. Project Management tools- Gantt Pro

UNIT-III

- a. Database Technology tools
 - a. SQL plus
 - b. MS-access
- b. Networking and Hardware tools
- c. MS-Office in Research

UNIT-IV

- a. Tools for collaboration and sharing research- Google drive, Facebook, Orcid, Research gate, Courseera, Khan academy

- b. Grammar checking tools, Plagiarism checking tool

DISSERTATION-I GUIDELINES-

Students are expected to have expertise in your selected area including a solid understanding of the literature in your field before you delve into solving a specific research problem within that field. In the master's research you present an idea along with a preliminary plan for your research and convince the faculty that the proposed research is worthy of a dissertation. This document can't be a static one. It has to be updated regularly to track the dissertation. This Paper should be of 20-30 pages. It includes the following elements:

- 1) Abstract
- 2) Introduction
- 3) Brief overview of Literature
- 4) Problem Statement
- 5) Dissertation Goal
- 6) Research Questions
- 7) References
- 8) Appendix (if needed)

Guidelines for Master's Research

- Give a survey of the basic facts and theories in the field of research.
- Give an account of the recent work done by other researchers, and what important questions still remain unanswered.
- Show what ideas you have for new research to find the answers to some of these questions.
- Give details of

- the new information you will seek,
- the materials to be used,
- the equipment needed,
- the observations and measurements to be made,
- how the data will be analysed.

DISSERTATION: In Dissertation, the students are required to do the research work related to their field. It involves two steps pre-submission & Final Submission of dissertation. In Pre-submission, every student will submit the synopsis on the selected topic and give the synopsis presentation also. In Final submission, every student will submit the detailed report on the selected topics and will present the findings of the report in front of the examination board.

- (i) Each M.Tech candidate shall be allotted a dissertation supervisor.
- (ii) Topic should be allotted to the student in third semester.
- (iii) Report may be divided into the number of chapters as required. Format of the report is as follows:

- **Introduction**
- **Review of Literature**
- **Methodology**
- **Results**
- **Conclusion**

The First Chapter should give:

- the general background of your work,
- a review of the work done by other people,
- the objective of your own work,
- the reasons why your work is interesting and useful.

The Middle Chapters should give detailed information about your work so that other people could repeat what you have done, or could do further work starting where your work finished. In these chapters you should

- explain the theory,
- describe exactly how you did the work,
- give the results you obtained.

The Last Chapter should:

- state the conclusions you have drawn from your work,
- compare your conclusions with the opinions of other people (Are your conclusions the same or different?).
- suggest what new work should be done to answer questions raised by your work and extend our knowledge further.

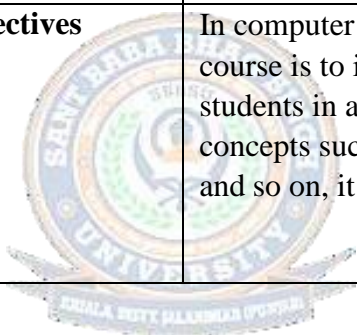

Evaluation of the dissertation will be done by the Supervisor, Nominee and External expert.

Course Code	CSE613
Course Title	Mini Project with Seminar
Type of Course	PC
L T P	0 0 4
Credits	2
Course Prerequisites	Basic knowledge of Software Engineering
Course Objectives	This course focuses on implementation of various real time projects
Course Outcome (CO)	The learner will be able to- <ol style="list-style-type: none"> 1. Understand different aspects of problem. 2. Describe the problem statement by doing thorough Literature survey 3. Design solution to the problem 4. Analyze and present seminar report along with a project in the area of study.

Seminar is a course requirement wherein under the guidance of a faculty member a student is expected to do an in depth study in a specialized area by doing literature survey, understanding different aspects of the problem and arriving at a status report in that area. It should provide insights into research methodology in the field, as well as an introduction to the meaning of research. While doing a seminar, the student is expected to learn investigation methodologies, study relevant research papers, correlate work of various authors/researchers critically, study concepts, techniques, prevailing results etc., analyze it and present a seminar report along with a project in the area of study. It is mandatory to give a seminar presentation and show the running project before a panel constituted for the purpose. The grading is done on the basis of the depth of the work done, understanding of the problem, report and presentation by the student concerned. Students will submit their report for seminar. Report which is to about 10-20 pages which should be based work done.

Course Code	CSE602
Course Title	Advanced Computer Networks
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Discrete Structures, Data Structures, Data Analysis and Interpretation.
Course Objectives (CO)	In computer science, graph theory is used extensively. The intension of this course is to introduce the subject of graph theory to computer science students in a thorough way .While the course will cover all elementary concepts such as coloring, covering, hamiltonicity, planarity, connectivity and so on, it will also introduce the students to some advanced concepts.

SYLLABUS

Unit-I

Introduction: Internet architecture and performance modeling: Review of Basic Network Architectures: OSI reference model, TCP/IP reference model, ATM reference model. Physical Layer: Different types of transmission media, and errors in transmission: attenuation, noise. Repeaters. Traffic Characterization (CBR, VBR) Switching Paradigms; Multiplexing. Error Control, Flow Control, FTH, DTH, PON, ISDN, DSL, CATV, SONET, Optical Networks.

Unit-II

Network Device, Routing algorithms, BGP, Advanced routing concepts, Router architectures, internetworking: Interdomain Routing, BGP, IPv6, Multicast Routing Protocols, Multi-Protocol Label Switching, and Virtual Networks. Transport layer Transport protocols, TCP mechanics, congestion control, resource allocation UDP mechanics. Socket Programming

Unit-III

High speed transport protocols, Quality of Service Mechanisms, Improving QoS in Internet, DiffServ and IntServ Architectures, RSVP. Distributed Systems: Naming, DNS, DDNS, Paradigms for Communication in Internet, Caching, Issues of Scaling in Internet and Distributed Systems, Caching Techniques for Web, Protocols to Support Streaming Media, Multimedia Transport Protocols, Content Delivery Networks, Overlay and P2P Networks.

Unit-IV

Applications: architectures and examples. Network virtualization, software defined networking Applications and Other Networking Technologies: RTP, RTSP, SIP, VoIP, Security Systems, SSH, PGP, TLS, IPSEC, DoS Attack, Mitigation in Internet, Security in MPLS

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Internetworking with TCP/IP: Principles, Protocols, and Architecture	Douglas E. Comer	Prentice Hall
2	Computer Networks	Andrew S. Tanenbaum, David J. Wetherall	Prentice-Hall
3	SDN: Software Defined Networks	Thomas D. Nadeau, Ken Gray	Kindle Ed., O'Reilly

Course Code	CSE604
Course Title	Big Data Analytics
Type of Course	PC
L T P	4 0 0
Credits	4
Course Prerequisites	Knowledge of Database Management System.
Course Objectives	To understand big data analytics as the next wave for businesses looking for competitive advantage, To understand the financial value of big data analytics, To explore tools and practices for working with big data, To understand how big data analytics can leverage into a key component, To understand how to mine the data, To learn about stream computing, To know about the research that requires the integration of large amounts of data.
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Identify the characteristics of datasets and compare the trivial data and big data for various applications. 2. Understand and apply Hadoop architecture and associated computing techniques and technologies. 3. Select and implement computing environment, Hadoop, Hive that are suitable for the applications under consideration. 4. Recognize and implement Hadoop ecosystem components YARN, HIVE and PIG.

SYLLABUS

UNIT-I

INTRODUCTION TO BIG DATA: Introduction – distributed file system – Big Data and its importance, Four Vs, Drivers for Big data, Big data analytics, Big data applications. Algorithms using map reduce, Matrix-Vector Multiplication by Map Reduce.

UNIT-II

INTRODUCTION HADOOP: Big Data – Apache Hadoop & Hadoop EcoSystem – Moving Data in and out of Hadoop – Understanding inputs and outputs of MapReduce - Data Serialization.

UNIT-III

HADOOP ARCHITECTURE: Hadoop Architecture, Hadoop Storage: HDFS, Common Hadoop Shell commands , Anatomy of File Write and Read., NameNode, Secondary NameNode, and DataNode, Hadoop MapReduce paradigm, Map and Reduce tasks, Job, Task trackers - Cluster Setup – SSH & Hadoop Configuration – HDFS Administering –Monitoring & Maintenance.

UNIT-IV

HADOOP ECOSYSTEM, YARN, HIVE & PIG: Hadoop ecosystem components - Schedulers - Fair and Capacity, Hadoop 2.0 New Features NameNode High Availability, HDFS Federation, MRv2, YARN, Running MRv1 in YARN. Hive Architecture and Installation, Comparison with Traditional Database, HiveQL - Querying Data - Sorting And Aggregating, Map Reduce Scripts, Advance Indexing – PIG

RECOMMENDED BOOKS			
Sr. No.	NAME	AUTHOS(S)	PUBLISHER
1	Big Data Analytics: Turning Big Data Into Big Money	Frank J Ohlhorst	WILEY AND S AS Business Series
2	“Professional Hadoop Solutions”	Boris lublinsky, Kevin t. Smith, Alexey Yakubovich,	Wiley, ISBN: 9788126551071, 2015.
3	“Understanding Big data ”	Chris Eaton, Dirk deroos et al.	
4	Big Data, Black Book(covers Hadoop 2, Mapreduce, Hive, Yarn, Pig, R And Data Visualization	DT Editorial Services	WILEY INDIA PVT.LTD

Course Code	CSE606
Course Title	Intellectual Property Rights In Research
Type of Course	PC
L T P	4 1 0
Credits	5
Course Prerequisites	Basic knowledge of mathematical concepts
Course Objectives	The course aims at equipping students with an understanding of the research process, tools and techniques in order to facilitate managerial decision making.
Course Outcomes (CO)	At the end of this course, students will be able to <ol style="list-style-type: none"> 1. Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular. 2. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

SYLLABUS

Unit I

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development.

International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT

Unit II

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.

Unit III

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc.

Unit IV

Traditional knowledge Case Studies, IPR and IITs.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Intellectual property rights	Neeraj Pandey, Khushdeep Dharni	PHI Publications
2	Law Relating To Intellectual Property Rights	Dr. M.K. Bhandari	Central Law Publications

IPR

Course Code	CSE608
Course Title	Technical Writing
Type of Course	AEC/ Audit
L T P	2 0 0
Credits	0
Course Prerequisites	Nil
Course Objectives	<ol style="list-style-type: none"> 1. Understand that how to improve your writing skills and level of readability 2. Learn about what to write in each section 3. Understand the skills needed when writing a Title 4. Ensure the good quality of paper at very first-time submission
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Develop writing skills by analyzing model texts 2. Expand academic vocabulary 3. Consolidate more advanced aspects of English grammar relevant to writing research papers 4. Consolidate language functions found in research papers 5. Compare various practices and conventions used in writing research papers across a range of disciplines.

Syllabus

UNIT-I

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticising, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction

UNIT-II

Review of the Literature, Methods, Results, Discussion, Conclusions, the Final Check.

UNIT-III

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature

UNIT-IV

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, and skills are needed when writing the Conclusions.

Useful phrases, how to ensure paper is as good as it could possibly be

RECOMMENDED BOOKS			
Sr. no.	Name	Author(s)	Publisher
1	Writing for Science	Goldbort R (2006)	Yale University Press (available on Google Books)
2	How to Write and Publish a Scientific Paper	Day R (2006)	Cambridge University Press
3	Handbook of Writing for the Mathematical Sciences	Highman N (1998)	SIAM. Highman'sbook
4	English for Writing Research Papers	Adrian Wallwork	Springer New York Dordrecht Heidelberg London, 2011

Course Code	CSE602
Course Title	Dissertation-II
Type of Course	PC
L T P	0 0 16
Credits	8
Course Prerequisites	Dissertation-I
Course Objectives	The objective of this course is to successfully complete Dissertation with report, research paper with results in UGC approved journal and implementation of work under research
Course Outcome (CO)	The learner will be able to- <ol style="list-style-type: none"> 1. Prepare detailed dissertation report for pre-submission and final submission 2. Comprehend and present the synopsis 3. Submit detailed report in front of the examination board

DISSERTATION-II:

In Dissertation, the students are required to do the research work related to their field. It involves two steps pre-submission & Final Submission of dissertation. In Pre-submission, every student will submit the synopsis on the selected topic and give the synopsis presentation also. In Final submission, every student will submit the detailed report on the selected topics and will present the findings of the report in front of the examination board.

- (i) Each M.Tech candidate shall be allotted a dissertation supervisor.
- (ii) Topic should be allotted to the student in third semester.
- (iii) Report may be divided into the number of chapters as required. Format of the report is as follows:

- **Introduction**
- **Review of Literature**
- **Methodology**
- **Results**
- **Conclusion**

The First Chapter should give:

- the general background of your work,
- a review of the work done by other people,
- the objective of your own work,
- the reasons why your work is interesting and useful.

The Middle Chapters should give detailed information about your work so that other people could repeat what you have done, or could do further work starting where your work finished. In these chapters you should

- explain the theory,
- describe exactly how you did the work,
- give the results you obtained.

The Last Chapter should:

- state the conclusions you have drawn from your work,
- compare your conclusions with the opinions of other people (Are your conclusions the same or different?),
- suggest what new work should be done to answer questions raised by your work and extend our knowledge further.

DISSERTATION-II:

In Dissertation, the students are required to do the research work related to their field. It involves two steps pre-submission & Final Submission of dissertation. In Pre-submission, every student will submit the synopsis on the selected topic and give the synopsis presentation also. In Final submission, every student will submit the detailed report on the selected topics and will present the findings of the report in front of the examination board.

- (iv) Each M.Tech candidate shall be allotted a dissertation supervisor.

- compare your conclusions with the opinions of other people (Are your conclusions the same or different?),
- suggest what new work should be done to answer questions raised by your work and extend our knowledge further.

Evaluation of the dissertation will be done by the Supervisor, Nominee and External expert

OPEN ELECTIVE

Course Code	CE 611
Course Title	Introduction To Rural Technology & Community Development
Type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	Community Development
Course Objectives	The objective of this course is to make students aware of the various elements of rural technology and community development.
Course Outcome (CO)	The learner will be able to- 1. Understand nature, scope and limitation of statistics 2. Analyze need and qualities of information 3. Differentiate marketing selling and retailing

SYLLABUS

UNIT-I

Data analysis and measures of central tendency

Meaning nature scope and limitations of statistics, collection of statistical data, classification, tabulation and diagrammatic representation of data, measures of central tendency : statistical averages means, media and mode.

UNIT-II

Data Information and Knowledge

Concept of information, need of information(professional education, research), qualities of information, value of information, difference between data and information, properties of the needed information, information and management, planning organizing, Coordinating and controlling

UNIT-III

Concept of Marketing

Difference between marketing selling and retailing, marketing mix, market segmentation, marketing planning, strategy and approaches; modern concept of marketing

Community Development

Concept, definition, meaning, need, history, principles objectives and scope. Community building: coming age, regenerating community, community model

UNIT-IV

Consensus Organizing model

What's behind building healthy communities, participatory democracy? The role of various NGOs in community development. The role of business and government in community development initiatives, how to form a non profit corporation fund raising and grant writing.

RECOMMENDED BOOKS			
Sr. no.	Name	Author(s)	Publisher
1	Encouraging community development	Biddle William wishart	Mcgraw hill
2	Sustainable rural technology	M.S Viridi	Daya publishing house
3	Rural technology	Punia RD Roy	Satyaparkashan
4	Rural education and technology	S.B Verma, S.K Jiloka	Deep and deep publication

Course Code	ME611
Course Title	Industrial Safety Engineering
Type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	This course has no prerequisite other than knowledge of business process and data mining techniques
Course Objectives	The student will be able to identify and solve complex engineering principles.
Course Outcomes (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics 2. Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors 3. Communicate effectively with a range of audiences 4. Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts 5. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

SYLLABUS

UNIT-I

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT-II

Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

UNIT-III

Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity

lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

UNIT-IV

Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

UNIT-V

Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Maintenance Engineering Handbook	Higgins & Morrow	Da Information Services
2	Maintenance Engineering	H. P. Garg	S. Chand and Company
3	Pump-hydraulic Compressors	Audels	McGraw Hill Publication
4	Foundation Engineering Handbook	Winterkorn, Hans	Chapman & Hall London

Course Code	ME613
Course Title	Concepts of Composite Materials
Type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	Basics of Engineering mechanics
Course Objectives	1. Ability to solve mechanics of composite materials problems using classical methods Assignments: Weekly problem sets are assigned. 2. Ability to do research and present on an advanced material topic Assignment: Students submit a research paper and present it in class
Course Outcomes (CO)	The learner will be able to- 1. Understand types, manufacturing processes, and applications of composite materials 2. Analyze problems on macromechanical behavior of lamina 3. Analyze problems on micromechanical behavior of lamina 4. Analyze problems on macromechanical behavior of laminate 5. Analyze problems on bending, buckling, and vibration of laminated plates and beams 6. Obtain laminate behavior using a computer program 7. Perform literature search on a selected advanced material topic and giving class presentation

SYLLABUS

UNIT-I

INTRODUCTION: Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT – II

REINFORCEMENTS: Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

UNIT – III

Manufacturing of Metal Matrix Composites: Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. Manufacturing of Ceramic Matrix

Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving. Properties and applications.

UNIT-IV

Manufacturing of Polymer Matrix Composites: Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.

UNIT – V

Strength: Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Material Science and Technology – Vol 13 – Composites	R.W.Cahn	VCH, West Germany
2	Materials Science and Engineering, An introduction	WD Callister, Jr., Adapted by R. Balasubramaniam	John Wiley & Sons, NY, Indian edition, 2007
3	Hand Book of Composite Materials		ed-Lubin.
4	Composite Materials	K.K.Chawla	
5	Composite Materials Science and Applications	Deborah D.L. Chung	
6	Composite Materials Design and Applications	Danial Gay, Suong V. Hoa, and Stephen W. Tasi	

Course Code	ME615
Course Title	Concepts of Renewable Energy Resources
type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	Energy resources
Course Objectives	The class will explore society's present needs and future energy demands, examine conventional energy sources and systems, including fossil fuels and nuclear energy, and then focus on alternate, renewable energy sources such as solar, biomass (conversions), wind power, geothermal, and hydro.
Course Outcome (CO)	The learner will be able to-
	1.Make interpretation about the energy sources, comprehend the energy and energy types.
	2.Make interpretation about the solar energy, explain the solar energy power plants.
	3.Make interpretation about the geothermal energy, explain the production of electricity from geothermal fluid.

SYLLABUS

UNIT-I

Principles of solar radiation: Role and potential of new and renewable source, the solar energy option, Environmental impact of solar power, physics of the sun, the solar constant, extraterrestrial and terrestrial solar radiation, solar radiation on tilted surface, instruments for measuring solar radiation and sun shine, solar radiation data.

UNIT-II:

Solar energy collection: Flat plate and concentrating collectors, classification of concentrating collectors, orientation and thermal analysis, advanced collectors.

Solar energy storage and applications: Different methods, Sensible, latent heat and stratified storage, solar ponds. Solar Applications- solar heating/cooling technique, solar distillation and drying, photovoltaic energy conversion.

UNIT-III:

Wind energy: Sources and potentials, horizontal and vertical axis windmills, performance characteristics, Betz criteria

Bio-mass: Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, I.C.Engine operation and economic aspects.

UNIT-IV:

Geothermal energy: Resources, types of wells, methods of harnessing the energy, potential in India.

Ocean energy: OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques, mini-hydel power plants, and their economics.

Direct energy conversion: Need for DEC, Carnot cycle, limitations, principles of DEC

Recommended Books

1	Non-Conventional Energy Sources	G.D. Rai	Khanna Publishers
2	Renewable Energy Resources	Twidell&Wier	CRC Press(Taylor & Francis)
3	Renewable energy resources	Tiwari and Ghosal	Narosa.
4	Renewable Energy Technologies	K Mittal	Wheeler

Course Code	EE611
Course Title	Electrical Installation and safety
Type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	Electrical energy
Course Objectives (CO)	<ol style="list-style-type: none"> 1. Understand Electrical wiring, residential building electrification, electrification of commercial installation, electrification of factory unit installation 2. Protection against electric shock, safety measures and prevention of accidents
Course Outcomes	<p>The learner will be able to</p> <ol style="list-style-type: none"> 1. Acquire the knowledge of different types of wires and wiring systems, electric supply act. 2. Explain the importance of earthing, rating of wires and cables, procedures for residential, commercial electrification

SYLLABUS

UNIT-I

Electrical wiring with IE rules- Introduction, defines types of wires, different types of wiring system, comparison of different types of wiring, different types and specifications of wiring materials, accessories and wiring tools; prepare I.E. rules for wiring, including Electricity supply act 2003 & 2005;

UNIT-II

Residential Building Electrification-

General rules, guidelines for wiring of residential installation and positioning of equipments. Principles of circuit design in lightning and power circuits, Procedures for designing the circuits and deciding the number of circuits; Method of drawing the single line diagram, selection of type of wiring and rating of wires and cables; Load calculations and selection of size of conductor; Selection of rating of main switch, distribution board

UNIT-III

Electrification of commercial installation

Concept of commercial installation; differentiate between electrification of residential and commercial installation; fundamental consideration for planning of an electrical installation system for commercial building; Load calculations & selection of size of service connection and nature of supply.

UNIT-IV

Protection against electric shocks- Electric shock,-general, protection against direct contact, protection against indirect contact, protection of goods in case of installation fault, Implementation of the TT system, Implementation of the TN system, elements of IP code and their meanings, IK code definition.

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Estimating and Costing	Dr. S.L. Uppal	New Age International (p) Limited, New Delhi
2	Electrical Design Estimating and costing	K.B. Raina & S.K. Battacharya	New Age International (p) Limited, New Delhi

Course Code	COM223
Course Title	Business Analytics
Type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	This course has no prerequisite other than knowledge of business process and data mining techniques
Course Objectives (CO)	<p>The student will be able to-</p> <ol style="list-style-type: none"> 1. Understand the role of business analytics within an organization. 2. Analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization. 3. To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making. 4. To become familiar with processes needed to develop, report, and analyze business data. 5. Use decision-making tools/Operations research techniques. 6. Manage business process using analytical and management tools. 7. Analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc.
Course Outcomes	<p>At the end of the course-</p> <ol style="list-style-type: none"> 1. Students will demonstrate knowledge of data analytics. 2. Students will demonstrate the ability of think critically in making decisions based on data and deep analytics. 3. Students will demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making. 4. Students will demonstrate the ability to translate data into clear, actionable insights.

SYLLABUS

UNIT-I

Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and Modeling, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modeling, sampling and estimation methods overview.

UNIT-II

Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

UNIT-III

Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization.

UNIT-IV

Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

UNIT-V

Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.

UNIT-VI

Recent Trends in : Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

RECOMMENDED BOOKS

Course Title	Internet of Things
Type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	This course has no prerequisite other than knowledge of business process and data mining techniques
Course Objectives (CO)	1. Understand the role of internet in e –commerce
Course Outcomes	At the end of the course- 1. Students will demonstrate knowledge of data analytics. 2. Students will demonstrate the ability of think critically in making decisions based on data and deep analytics. 3. Students will demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making. 4. Students will demonstrate the ability to translate data into clear, actionable insights.

SYLLABUS

UNIT-I

Introduction to IoT Defining IoT, Characteristics of IoT, Physical design of IoT, Logical design of IoT, Functional blocks of IoT, Communication models & APIs

UNIT-II

IoT & M2M Machine to Machine, Difference between IoT and M2M, Software define Network, Network & Communication aspects Wireless medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment & Node discovery, Data aggregation & dissemination

UNIT-III

Challenges in IoT Design challenges, Development challenges, Security challenges, Other challenges Domain specific applications of IoT Home automation, Industry applications, Surveillance applications, Other IoT applications

UNIT-IV

Developing IoTs Introduction to Python, Introduction to different IoT tools, Developing applications through IoT tools, Developing sensor based application through embedded system platform, Implementing IoT concepts with python

RECOMMENDED BOOKS			
Sr. no.	Name	AUTHOR(S)	PUBLISHER
1	Designing the Internet of things	Adrian McEwen and Hakim Cassimally	Amazon
2	The Internet of Things – The Next Industrial Revolution Has Begun: How IoT, big data, predictive analytics, machine learning and AI will change our lives forever	Magnus Unemyr	Potscales.com

Course Code	CSE613
Course Title	Software Project Planning & Management
Type of Course	OE
L T P	3 0 0
Credits	3
Course Prerequisites	Software Engineering
Course Objectives	Student learn to select and apply software metrics and project management techniques for process modeling, planning, estimation, process metrics and risk management; perform software verification and validation using inspections, design and execution of system test cases.
Course Outcome (CO)	<p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Understand stepwise project planning, contract management and project evaluation techniques. 2. Perform strategic and technical assessment of the project under evaluation. 3. Analyze cash flow and risk evaluation involved in the project 4. Comprehend schedule of the project using network planning models. 5. Identify and analyze hazards involved in the project 6. Schedule, organize and monitor teams for effective project management

SYLLABUS

UNIT-I

Software Project Management

Project Definition, Contract Management, Activities covered By Software Project Management, Overview of Project Planning, Stepwise Project Planning.

Project Evaluation

Strategic Assessment, Technical Assessment, Cost Benefit Analysis –Cash Flow Forecasting, Cost Benefit Evaluation Techniques, Risk Evaluation.

Activity Planning

Objectives, Project Schedule, Sequencing and Scheduling Activities –Network Planning Models, Forward Pass, Backward Pass, Activity Float, Shortening Project Duration, Activity on Arrow Networks, Risk Management, Nature Of Risk, Types Of Risk, Managing Risk, Hazard Identification, Hazard Analysis, Risk Planning And Control

UNIT-II

Monitoring And Control

Creating Framework, Collecting Data, Visualizing Progress, Cost Monitoring, Earned Value, Prioritizing Monitoring, Getting Project Back To Target, Change Control, Managing Contracts, Introduction, Types Of Contract, Stages In Contract Placement, Typical Terms Of A Contract, Contract Management, Acceptance.

Managing People And Organizing Teams

Introduction, Understanding Behavior, Organizational Behaviour: A Background, Selecting The Right Person For The Job, Instruction In The Best Methods, Motivation, The Oldham, Hackman Job Characteristics Model, Working In Groups, Becoming A Team, Decision Making, Leadership, Organizational Structures, Stress, Health And Safety, Case Studies.

UNIT-III

Software Metrics

Measurement in software engineering, objectives & scope of software metrics, quality models & measures, measurement & models

Empirical Investigation

Principles Of Investigation, Procedures For Experiments, Types Of Experimental Designs, Nested Vs Crossed Designs.

Software-Metrics Data Collection & Analysis

Defining Data, Faults, Collecting, Storing & Extracting Data, Analyzing results of experiments, Examples of simple analysis techniques, Measuring internal & external product attributes.

UNIT-IV

Software Reliability & Process Predictions

Reliability Theory, Software Reliability Problem, Measuring Productivity, Teams, Tools, And Methods, Making Process Predictions, Cost Estimation: Problems And Approaches, Models Of Effort And Cost, Dealing With Problems Of Current Estimation Methods.

Planning A Measurement Program

Metrics Plans, Developing Goals, Questions, And Metrics, Mapping Measures To Activities, Assessment Tools, Measurers, Analysts, And Audience
