Institutional Chemicals Ethics Committee (IAEC)

The following Institutional Chemicals Ethics Committee (ICEC) has been constituted for two years i.e. up to March 2024. All experiments involving the use of different chemicals (Hazardous/ Non-hazardous) are reviewed by the ICEC.

Name	Designation	Institute/ Department
Dr. Nisha Sharma	Associate Professor (Chemistry), Chairperson	Dean, University Institute of Sciences (UIS), SBBS University Jalandhar
Dr. Nizmul Haq Ansari	Professor (Chemistry)	CoD Life Sciences, University Institute of Sciences, SBBS University Jalandhar
Dr. Mithu Maiti Jana	Associate Professor (Chemistry)	Dean, University Institute of Sciences (UIS), SBBS University Jalandhar
Dr. Kumari Manisha	Assistant Professor (Agriculture)	Assistant Professor Life Sciences, UIS, SBBS University Jalandhar
Dr. Anil Kumar Singh	Assistant Professor (Agriculture)	Assistant Professor Agriculture, UIS, SBBS University Jalandhar
Dr. Gurmanik Kaur	Associate Professor (Electrical Engineering)	Associate Professor Electrical engineering, UIET, SBBS University Jalandhar
Dr. Vijay Singh	Assistant Professor (Agriculture)	Assistant Professor Agriculture, UIS, SBBS University Jalandhar
Dr. Vikas	Associate Professor (Agriculture)	Associate Professor Agriculture, UIS, SBBS University Jalandhar
Dr. Aneet Kumar	Professor from outside the Institute	Professor UIE, SBBS University Jalandhar

SANT BABA BHAG SINGH UNIVERSITY, DISTT. JALANDHAR 1 CHAPTER 1 INTRODUCTION 1.1

Sentiment Analysis Sentiments are internal feelings and emotions of a person towards an entity in the

real world [1]. Sentiment analysis is a process of extracting and stating opinions from a

very large file [2]. The major sources include reviews, comments from social networking sites and political judgements made by people.

Nowadays, the most prevalent

fields, such as natural language processing and data mining, handle the process of sentiment analysis by applying various methods and algorithms in a sophisticated manner [3]. Sentiment analysis is also referred to as opinion mining because data mining is applied to extract and segregate opinions [4]. The sentiments according to the nature of an opinion can express

the

positive, negative, or neutral attitude of a person towards an object (

as shown in Figure 1.1). The reviews, comments, and judgements about the

products and services offered by an organization are valuable assets for future policy formation.

The process of extracting useful opinions by manually reading a myriad

of reviews and comments seems very tedious and time-consuming. This process of manually handling opinions has been replaced with a well-defined set of natural language processing and data mining techniques.

Figure 1.1: Sentiment Analysis

SANT BABA BHAG SINGH UNIVERSITY, DISTT. JALANDHAR 2 These techniques can perform a range of tasks from automatic data collection to the

presentation of results in efficient and interactive ways. The approach adopted in the analysis includes a series of steps to obtain the results based on the polarity of opinions provided by contributors. The first step generally specifies

the

identification of sentiments from a given sentence or text. The basic approach stores all or maximum opinion words into a file or database for comparison purposes. The reviews and comments are processed against these database opinion words to determine whether a review or comment contains any opinion or not. Other methods, such as dictionary-based and corpus-based use online references, i.e., WordNet to find the polarity of opinion [5]. Polarity states whether an opinion shows

a

favourable or unfavourable attitude about any object. Polarity can be ranged on a given scale to conclude the overall rating of an object. Dictionary-based methods sometimes appear

to be

Entire Document

CHAPTER-1 INTRODUCTION 1.1 Kidneys The kidneys are a pair of bean-shaped organs in the peritoneal cavity that are placed slightly below & posterior to the liver, with the right kidney little lower than that of the left kidney. They eliminate the waste products & additional water from the blood & assist with keeping electrolytes (like sodium, potassium & calcium) adjusted in the body. Moreover, the kidneys make chemical substances that assist control with blood pressure & encourage bone marrow to make red platelets. Without this equilibrium, nerves, muscles, & different tissues in the body may not function normally [1]. 1.2 Structure of Kidneys The kidneys are located high in the back of the stomach cavity, with one sitting on either side of the spine. The right kidney is normally somewhat more modest & lesser than the left, because of the liver's position. An extreme, fibrous renal capsule encompasses every kidney. The adrenal organs put on top of the kidneys. There are various pyramid shaped lobes inside the kidneys. Each comprises of an external renal cortex & an internal renal medulla. The kidney is prominently filled with Nephrons. Nephrons stream between renal cortex & renal medulla segments, filters the blood & generated urine. The kidneys are moderately little organs & to make this function, these organs use nearly 25% of the oxygen absorbed through the lungs. Figure 1.1 shows the anatomy of a kidney.
