| 70 | CSE451 | Cryptography | 7 | 136 |
| 71 | CSE453 | Multimedia and Animation | 7 | 137-138 |
| 72 | CSE455 | Natural Language Processing | 7 | 139 |
| 73 | CSE477 | Data Mining in Business Intelligence | 7 | 140-141 |
| 74 | CSE466 | Six Months Industrial Training | 8 | 143 |
| OPEN ELECTIVE | | | | |
| 75 | CSE391 | Basics of Artificial Intelligence | | 145-146 |
| 76 | CSE393 | Introduction to Cloud Computing | | 147-148 |
| 78 | CSE491 | Introduction to Operating System | | 149-150 |
| 79 | CSE493 | Basics of Networking | | 151-152 |
| 80 | CSE495 | Introduction to Digital Marketing | | 153-154 |
| 81 | CSE497 | Basics Concepts of IOT | | 155-156 |
| 82 | CSE489 | E-Commerce | | 157-158 |
| 83 | CSE499 | Introduction to Cyber Security | | 159-160 |
| 84 | | Entrepreneurship Mindset Curriculum - I (Mandatory course by Punjab Government) | | 161-172 |

Programme Code:UG018

ABOUTTHEDEPARTMENT

The Department of Computer Science and Engineering focuses not only on the theoretical aspects but emphasize the overall development of the students. There are Special Interest Groups among the faculty who are focused in their research domains like Data Mining and Big Data Analytics, Wireless & Mobile Computing, Security & Trust Computing, Wireless Sensor Networks & IOT, Soft Computing, Image Processing, Machine Learning and Data Analytics, Natural Language Processing, Cloud Computing and Social Networking, Network Security, Service Oriented Architecture and Theoretical Computer Sciences. The departments many strengths include its high faculty to student ratio, state of the art facilities, strong focus on teaching learning balanced with leading-edge research and emphasis on leadership, service and ethics. The efficacy of the Teaching Learning process is reflected in the consistently excellent results being achieved every year. To augment professional competence, the department supports outside talents to gain more inputs, organizes hackathons, seminars, workshops, industrial visits and expert lectures not only To offer a new dimension to the learning process but also infuse leadership qualities in the budding engineers.

SALIENTFEATURESOFTHEDPARTMENT

1. Provides a learning environment strongly focused on collaborative and interdisciplinary research under the guidance of experienced and qualified faculty. The majority of the faculty members hold doctoral degrees.
2. The teaching programme is devised keeping in view the significance of industry–academia interaction, enabling students to face global competitiveness with effective communication skills.
3. The CSE Department regularly organizes conferences, hackathons, seminars, student symposia, short-term training programs, and value-added courses. This provides a wide range of opportunities for faculty and students to bring out their potential and innovative skills in a variety of fields.
4. The department has well-equipped computing laboratories and a rich repository of software covering a wide spectrum of applications. In collaboration with IIT, the department has set up a Virtual Lab for remote experiments. Besides this, the department offers NPTEL and MOOC courses for both students and faculty.
5. The Digital Library provides access to journals and video lectures delivered by eminent professors.

B.TECH (BACHELORSINTECHNOLOGY)

Educational qualification matters a lot in gaining success. Along with academic qualification, technical skills are also required. Job openings for Software professionals are much higher in the corporate sector than in public sector. Professionals can join as junior programmer, database administrator, junior network manager, Data Analyst, Software Developer, Software Engineer, and Client-Server Systems Manager etc in the initial stage.

Students have job opportunities at organizations like IBM, Intel, HP, TCS, Infosys, Wipro, Tech Mahindra, CTS, and Dell in India and abroad.

Programme Code:UG018

VISION

Empower every student to be innovative and creative, and to acquire skills in Computer Science & Engineering to enrich society and achieve a happy, successful, and meaningful life.

MISSION

Our mission is to provide high-quality undergraduate and postgraduate education in Computer Science & Engineering that ensures the all-round growth of individuals by creating a futuristic environment that fosters critical thinking, dynamism, and innovation. We aim to transform students into globally competitive professionals while empowering youth in rural communities through computer education.

ELIGIBILITY CRITERIA

- Passed 10+2 examinations with Physics & Mathematics as a compulsory subject along with one of the Chemistry/ Computer Science/ Biology/Biotechnology/ Technical Vocational subjects. Obtained at least 45% marks (40% in case of candidate belonging to reserved category) in the above subject stake together.
- B.Tech (Lateral Entry) Diploma in Engineering & technology from AICTE approved institution or B.Sc (N.M) from UGC approved university at least 45% marks. (40% in case of reserved category)

DURATION

*B.Tech CSE-
4 years
B.Tech CSE Leet-
3 years*

CAREER PATHWAY

Job openings for software professionals are much higher in the corporate sector than in the public sector. Professionals can begin their careers as Junior Programmers, Database Administrators, Junior Network Managers, Data Analysts, Software Developers, Software Engineers, and Client–Server Systems Managers at the initial stage.

Students have job opportunities at organizations like IBM, Intel, HP, TCS, Infosys, Wipro, Tech Mahindra, CTS, and Dell in India and abroad. These are some of the well-known companies that aspiring software engineers are familiar with. In addition, companies such as Infosys, Capgemini, Accenture, Cognizant, and others typically offer salary packages ranging between 3–3.5 LPA for fresher.

All the companies mentioned above are leading recruiters of B.Tech CSE graduates. As a B.Tech CSE graduate, a candidate's starting salary may range from 2 LPA to 10 LPA, depending on individual skills, performance, and opportunities. Overall, the field offers significant earning potential and strong career growth prospects.

CHOICE BASED CREDIT SYSTEM (CBCS)

PREAMBLE

The University Grants Commission (UGC), New Delhi, in its 12th Plan Guidelines, directed universities across the country to implement the Choice Based Credit System (CBCS) to set a benchmark in university education and fulfill the expectations of all stakeholders.

OBJECTIVES

1. To shift the focus from teacher-centric to learner-centric education.
2. To allow students to choose courses according to their learning needs, interests, and aptitude.
3. To provide flexibility by enabling students to choose interdisciplinary courses, change majors, and select suitable programs.
4. To make education broad-based, allowing students to earn credits by choosing unique course combinations.
5. To promote self-paced learning with flexibility. Students can opt for up to 26 credits per semester.
6. To enable students to decide their own pace of learning—slow, normal, or accelerated—and sequence their choice of courses. Students also learn to face challenges through term work and project work and may venture out to acquire additional knowledge or proficiency through add-on courses.

UPDATION/ADDENDUM

In

Model Curriculum for Undergraduate Degree Courses in Engineering & Technology

January 2018(Volume-II)

(As per Inputs of Experts)

1. The curriculum of **Humanities, Social Science including Management courses(HSMC)**
 - (i) Human Values courses is updated.
 - (ii) Course Code HSMC(HU-102) may be read as(H-102) along with the following:-
 - a Name of the course 'Universal Human Values 2: Self, Society and Nature's re-named as "**Universal Human Values 2: Understanding Harmony**".
 - b Contents of "**Universal Human Values 2: Understanding Harmony**" to be included.

Programme Code: UG 018

All India Council for Technical Education, New Delhi

Undergraduate Degree Courses in Engineering & Technology

COMPUTER SCIENCE AND ENGINEERING

Chapter-1

General, Course structure & Theme & Semester-wise credit distribution

A. Definition of Credit:

| | |
|-----------------------------|------------|
| 1 Hr. Lecture(L) per week | 1 credit |
| 1 Hr. Tutorial(T) per week | 1 credit |
| 1 Hr. Practical(P) per week | 0.5 credit |
| 2 Hours Practical(Lab)/week | 1 credit |

B. Range of credits-A range of credits from 150 to 160 for a student to be eligible to get Undergraduate degree in Engineering. A student will be eligible to get Under Graduate degree with Honor's or additional Minor Engineering, if he/she completes an additional 20 credits. They should be acquired through MOOC s.

C. Structure of Undergraduate Engineering Program:

| S. No. | Category | Credit Break up for CSE students |
|--------|---|----------------------------------|
| 1 | Humanities and Social Sciences including Management courses | 15 |
| 2 | Basic Science courses | 23 |
| 3 | Engineering Science courses including workshop, drawing, basics of electrical/mechanical/computer etc | 29 |
| 4 | Professional core courses | 49 |
| 5 | Professional Elective courses relevant to chosen specialization/branch | 18 |
| 6 | Open subjects–Electives from other technical and/or emerging subjects | 12 |
| 7 | Project work, seminar and internship in industry or else where | 15 |
| 8 | Mandatory Courses [Environmental Sciences, Induction Program, Indian Constitution, Essence of Indian Knowledge Tradition] | (non-credit) |
| | Total | 162 |

**Minor variation is allowed as per need of the respective disciplines.*

ProgrammeCode:UG018

C. Course code and definition:

| Course code | Definitions |
|--------------------|---|
| BS | Basic Science Courses |
| ES | Engineering Science Courses |
| HSMC | Humanities and Social Sciences including Management courses |
| PC | Professional core courses |
| PE | Professional Elective courses |
| OE | Open Elective courses |
| MC | Mandatory courses |
| SI | Summer Industry Internship |
| PROJ | Project |

ProgrammeCode:UG018

Induction Program (Please refer Appendix-A for guidelines)

| | |
|--|--|
| Induction program(mandatory) | 3 weeks duration <i>(Please refer Appendix-A for guidelines and also details available in the curriculum of mandatory courses.)</i> |
| Induction program for students to be offered right at the start to the First year. | <ul style="list-style-type: none">• Physical activity• Creative Arts• Universal Human Values• Literary• Proficiency Modules• Lectures by Eminent People• Visits to local Areas• Familiarization to Dept./Branch & Innovations |

ProgrammeCode:UG018

| Undergraduate Programme Outcomes (PO) | |
|---|---|
| At the end of the programme/degree mentioned above, the graduates will be able to ... | |
| PO1. | Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and engineering specialization to the solution of complex engineering problems.. |
| PO2. | Problem Analysis: Identify, formulate, research literature, and analyze engineering problems to arrive at substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. |
| PO3 | Design/Development of Solutions: Design solutions for complex engineering problems, and design system components and processes to meet specifications, considering public health and safety, as well as cultural, societal, and environmental factors. |
| PO4 | Conduct Investigations of Complex Problems: Use research-based knowledge, including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions. |
| PO5 | Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling, to complex engineering activities with an understanding of their limitations. |
| PO6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO7 | Environment and sustainability: Understand the impact of professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for, sustainable development. |
| PO8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO9 | Individual and teamwork: Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.. |
| P10 | Communication: Communicateeffectivelywiththeengineeringcommunityandwithsocietyatlarge. Be able to comprehend and write effective reports documentation. Make effective presentations, and give and receive clear instructions |
| P11 | Project management and finance: Demonstrate knowledge and understanding of engineering and management principles and apply these to one’s own work, as a member and leader in a team. Manage projects in multidisciplinary environments. |
| P12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

Undergraduate Programme Specific Outcomes (PSO)

| | |
|------|---|
| PSO1 | Ability to acquire knowledge in Computer Science and Engineering and develop innovative solutions to complex problems. |
| PSO2 | Design and build websites, Android apps, and automated projects using the knowledge of programming, testing, lifecycle models, artificial intelligence, machine learning, and CASE tools. . |
| PSO3 | Pursue lifelong learning in advanced technologies of Computer Science and Engineering and apply it for the benefit of the society. |

Undergraduate Programme Educational Objective (PEO)

The Graduate /Undergraduate will be....

| | |
|------|--|
| PEO1 | Acquiring knowledge of Computer Science and other engineering disciplines for analyzing and developing innovative solutions to real-world problems. |
| PEO2 | Developing interdisciplinary projects using latest tools, techniques and models for the benefit of the society and environment. |
| PEO3 | Demonstrating team leadership and effective communication skills while pursuing a career in life-long learning, research and development or generating employment through startups. |
| PEO4 | Preparing for competitive examinations for higher studies abroad or for getting jobs in private, public or multinational companies. |

|-----------------------------|--|
| Course Code | CSE111 |
| Course Title | Introduction to programming in C |
| Type of Course | ES |
| L T P | 3:0:0 |
| Credits | 3 |
| Course Prerequisites | Basic Knowledge about Computers |
| Course Objective (s) | To gain experience about structured programming. To help students to understand the implementation of Programming language. To understand various features in Programming Language. |
| Course Outcome (CO) | The students will be able to: 1. Illustrate the flow chart and to develop C programs. 2. Develop conditional and iterative statements to write C programs and exercise user defined functions to solve real time problems 3. Inscribe C programs that use Pointers to access arrays, strings and functions. 4. Exercise user defined data types including structures and unions to solve problems. |

SYLLABUS

UNIT I

Fundamentals of computer: Computer generations, History of languages, high- level, Lowlevel, Assembly languages etc. Definition and properties, Principles of flowcharts. Flow charting symbols, Algorithms.

Introduction To Programming Language: Character Set, Constants, Types of constants, Variables and Keywords, datatypes. Instructions: Type Declaration Instruction, Arithmetic Instructions.

UNIT II

Control structures: Decision making structures: If, If-else, Nested If-else, Switch. Loop Control structures: While, Do-while, for, nested for loop. Other statements: Break, Continue, goto, Exit

Arrays and Pointers: Arrays Initialization, Types of Array. Initializing Two Dimensional and Multi dimensional Arrays, Introduction to Pointers. Pointers and Functions.

UNIT III

Storage Classes and Character Strings: Automatic, Register, Static, External (Local and Global), Strings, Standard library String Functions: strlen (), strcpy (), strcat (), strcmp () **Functions:** Definition, Passing values between functions, call by value, call by reference, Recursion

Programme Code: UG018

UNIT IV

Structures and Unions: Declaring structure and its variables, Arrays of structures. Introduction to Unions.

Input/Output: Getchar (), putchar (), printf (), scanf (), puts (), gets () Introduction to files and its operations.

| RECOMMENDED BOOKS | | | |

| 1. | Programming in C | By ron Gottfried, Jitender Chhabra | Schuam outlines series |
| 2. | Letus C | Yaswant Kanetkar | BPB Publication |
| 3. | A structured Programming approach using C | Behrouz Forouzan | Thomas learning |

Programme Code: UG018

| | |
|--------------------|--|
| CourseCode | MAT171 |
| CourseTitle | EngineeringMathematics-I |
| Type ofcourse | Theory |
| L T P | 4:0:0 |
| Credits | 4 |
| Courseprerequisite | +2withnon- medical |
| Course Objective | The objective of this course is to familiarize the prospective engineers with techniques in basic calculus and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards Tackling more advanced level of mathematics and applications that they would find useful in their disciplines. |
| CourseOutcome(CO) | By the end of the course, students will be able to: CO1: Apply differential and integral calculus to notions of curvature and to improper integrals. CO2: Understand the Beta and Gamma functions. CO3: Comprehend tools of matrices and linear algebra, including linear transformations, eigenvalues, diagonalization, and orthogonalization. |

Syllabus

UNIT-I: Basic Calculus

Curvature, evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

UNIT-II: Single-variable Calculus

Rolle's Theorem, Mean value theorems and applications; Extreme values of functions; linear approximation; indeterminate forms and Hospital rule. Scalar and vector fields, Differentiation of vectors, Velocity and acceleration, Del, Gradient, Divergence, Curl and their physical interpretation.

UNIT -III: Sequences and series

Limits of sequence of numbers, Calculation of limits, Infinite series; Tests for convergence; Power series, Taylor and Maclaurin series; Taylor theorem, convergence of Taylor series, error estimates.

UNIT-IV: Multivariable Calculus (Differentiation)

Limit, continuity and partial derivatives, directional derivatives, gradient, total derivative;

Programme Code: UG018

Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers.

| Course Code | AEC0010 |
| Course Title | Communication Skills - I |
| Type of course | AEC-1 |
| LTP | 2:0:0 |
| Credits | 2 |
| Course prerequisite | +2inanystream |
| Course Objective (CO) | Objectives of the course: <ol style="list-style-type: none">1. Equip the learner with proficiency in reading comprehension.2. Enable the learner with improved writing skills and command over official/corporate communication.3. Enhance the learners' range of vocabulary and knowledge of the essentials of grammar. |
| Course Outcomes | <ul style="list-style-type: none"><input type="checkbox"/> Have fairly good proficiency in reading comprehension.<input type="checkbox"/> Have enhanced writing skills and command in official/corporate communication.<input type="checkbox"/> Develop confidence in making presentations: oral or documentary.<input type="checkbox"/> Develop speaking skills |

SYLLABUS

UNIT-I: Basics of Communication Skills

Communication, process of communication, types of communication—verbal and nonverbal communication, channels of communication—upward, downward, horizontal, barriers to communication, and the role of communication in society.

UNIT-II: Listening and Reading Skills

Listening Skills: Listening process, hearing vs. listening, types of listening, effective listening, barriers to effective listening, and note-taking.

Reading Skills: Purpose of reading, process of reading, reading skills models and strategies, scanning, skimming, SQ3R method, approaches to reading, and comprehension passages for practice.

UNIT-III: Writing Skills

Purpose of writing, effective writing, types of writing, business correspondence, precise writing, memo writing, and minutes of meetings.

UNIT-IV: Speaking Skills

Speech process, skills of effective speaking, role of audience, feedback skills, and oral presentation.

|-----------------------------|---|
| Course Code | ME107 |
| Course Title | Smart Materials |
| Type of Course | ES |
| LTP | 2 0 0 |
| Credits | 2 |
| Course pre-requisite | NA |
| Course Objectives | By the end of this course, the student should be able to: <ul style="list-style-type: none">• Apply basic principles and mechanisms of smart materials and devices and use them as a springboard for further study.• Demonstrate knowledge and understanding of the physical principles underlying the behavior of smart materials.• Describe the basic principles and mechanisms of the important smart materials.• Demonstrate knowledge and understanding of the engineering principles in smart sensors, actuators, and transducer technology.• Propose improvements on the design, analysis, manufacturing, and application issues involved in integrating smart materials and devices with signal processing and control capabilities to engineer smart structures and products. |
| Course Outcomes | <ol style="list-style-type: none">1 Understand the behavior and applicability of various smart materials.2 Design and conduct experiments, analyze and interpret data related to smart materials and devices.3 Design a system, component, or process based on smart materials to meet desired needs. |

SYLLABUS

UNIT-I: Introduction

Overview of smart materials and their properties, classification of smart materials, development of smart materials and devices, and areas of application of these devices.

UNIT-II: Piezoelectric, Electrostrictive, Magnetostrictive, and Magnetoelectric Materials

Piezoelectric and Electrostrictive Materials: Constitutive relationship, electromechanical coupling coefficients, piezoelectric constants, piezoceramic materials, variation of coupling coefficients in hard and soft piezoceramics, polycrystalline vs. single crystal piezoelectric materials, polyvinylidene fluoride, and piezoelectric composites.

Programme Code: UG018

Magnetostrictive and Magnetoelectric Materials: Constitutive relationship, magneto-mechanical coupling coefficients, Joule effect, Villari effect, Matteuci effect, Wiedemann effect, giant magnetostriction in Terfenol-D, Terfenol-D particulate composites, Galfenol, and Metglas materials.

UNIT-III:

Shape Memory Alloys and ER/MR Fluids

Shape Memory Alloys: Synthesis, types of shape memory alloys, nickel-titanium alloy (Nitinol), Cu-based alloys, chiral materials, applications such as fasteners, fibers, reaction vessels, nuclear reactors, chemical plants, satellite antennas, blood clot filters, and plastics.

Electrorheological (ER) and Magnetorheological (MR) Fluids: Suspensions and ER fluids, ER phenomenon, charge migration mechanism, ER fluid actuators, applications of ER fluids, composition of MR fluids, and applications of MR fluids.

UNIT-IV: Sensors, Actuators, and Measuring Techniques

Sensor Technology: Types of sensors, physical measurement using piezoelectric strain measurement, inductively read transducers, LVDT, fiber optic techniques, chemical and bio-chemical sensing in structural assessment, absorptive chemical sensors, spectrometers, fiber optic chemical sensing systems, and distributed measurement.

Actuator Techniques: Actuator types and actuator materials, piezoelectric and electrostrictive materials, magnetostrictive materials, shape memory alloys, electrorheological fluids, electromagnetic actuation, and the role of actuators and actuator materials.

Measuring Techniques: Strain measuring techniques using electrical strain gauges, types of gauges (resistance, capacitance, inductance), Wheatstone bridges, pressure transducers, load cells, temperature compensation, and strain rosettes.

| | |
|----------------------|---|
| Course Code | PHY115 |
| Course Title | Engineering Physics |
| Type of course | BS |
| LTP | 4 0 0 |
| Credits | 4 |
| Course prerequisite | 10+2 with physics as core subject. |
| Course Objective(CO) | The aim of the subject is to enhance the knowledge of engineering students about Semiconductor Physics and apply the knowledge to engineered semi conductor materials. |
| Course Outcome(CO) | Students will be able to: CO1: Gain the knowledge to explain the concept of electronics materials. CO2: Understand the physics of semiconductors and light semiconductor interaction. CO3: illustrate the measurements of carrier density, resistivity and hall mobility using different techniques. CO4: Analyze engineered semiconductor materials and its applications. |

Syllabus-

UNIT I

Electronic materials: Free electron theory, Density of states and energy band diagrams, Kronig-Penny model (to introduce origin of band gap), Energy bands in solids, E-k diagram, Direct and indirect band gaps. Types of electronic materials: metals, semiconductors, and insulators, Density of states, Occupation probability, Fermi level, Effective mass, Phonons.

UNIT II

Semiconductors and Light-semiconductor interaction: Intrinsic and extrinsic semiconductors, Dependence of Fermi level on carrier-concentration and temperature (equilibrium carrier statistics), Carrier generation and recombination, Carrier transport: diffusion and drift, p-n junction, Metal-semiconductor junction (Ohmic and Schottky), Semiconductor materials of interest for optoelectronic devices.

Optical transitions in bulk semiconductors: absorption, spontaneous emission, and stimulated emission; Joint density of states, Density of states for photons, Transition rates (Fermi's golden rule), Optical loss and gain; Photovoltaic effect, Exciton, Drude model.

UNIT III

Measurements: Four-point probe and vander Pauw measurements for carrier density, resistivity, and hall mobility; Hot-point probe measurement, capacitance-voltage measurements, parameter extraction from diode I-V characteristics, DLTS, bandgap by UV-spectroscopy, absorption/transmission.

Programme Code: UG018

UNITIV

Engineered semi conductor materials: Density of states in 2D, 1d and 0D (qualitatively). Practical examples of low-dimensional systems such as quantum wells, wires, and dots: design, fabrication, and characterization techniques. Hetero junctions and associated band-diagrams.

| Credits | 3 |
| Course Prerequisites | NA |
| Course Objective (s) | To connect and sensitize the students towards the environment and prevailing environmental issues (natural, physical, social and cultural). |
| Course Outcome (CO) | The students will be able to: 1. To understand the importance of environment in their life Develop conditional and iterative statements to write C programs and exercise user defined functions to solve real time problems 2. To learn about the concept of Ecosystem Exercise user defined data types including structures and unions to solve problems. 3. To understand the relation between social issues and environment 4. To learn about the new technology in harmony with environment. |

SYLLABUS

UNIT I

Introduction: Definition, scope and role of Environmental studies in Engineering. Vis a reness of basic concept of environment.

Types of Natural Resources and its management: Renewable and non-renewable resources case studies and there over-exploitation: Forest resources, Water resources, Mineral resources, Food resources, Land resources

Ecosystems. Types of Ecosystem. Energy Flow. Biodiversity, Biogeographical classification of India. Mega diversity centers, Hotspot, Threats to biodiversity: habitat loss, Conservation. Endangered and endemic species of India.

UNIT II

Environmental Pollution and Engineering Disaster: Definition, Causes, effects and control measures of air pollution, Water pollution, Soil pollution. Marine pollution, Noise pollution Natural disaster (Avalanche. Landslide, floods, cyclones, earth quakes and volcano eruption of catchment area for human purpose and man-made disaster (chernobyl explosion, Electronic Graveyard China, The Exxon Valdez Oil Spill. Bhopal gas tragedy). Environmental ethics: Issues and possible solutions. Wasteland reclamation. Consumerism and waste products. Salient features of various environment, forest, wildlife and pollution acts. Manufacturing green technology, The National Green Tribunal Act 2010, scheme and labeling of

Programme Code: UG018

Environment friendly products, Ecomarks

Environment and Social Issues: Sustainable development, urban problems related to energy, energy over-consumption and its impact on the environment, economy, and global change, Climate change, global warming, acid rain, ozone layer depletion. Solid waste management. Liquid waste management, Waste water recycling, rain water harvesting. Wastewater management, Environment economics

UNIT IV

Definition and concepts: green technology, green energy, green economy. Alternative source as green (bio fuels, wind energy, geothermal energy, ocean energy: nuclear energy); need for energy efficiency; energy conservation and sustainability. Sustainable development; case studies of environment movements (Appiko Movement, Chipko Movement, Narmada Bachao Andolan).

| Course Code | CSE113 |
| Course Title | Programming in C practical |
| Type of Course | ES |
| L T P | 0:0:2 |
| Credits | 1 |
| Course Prerequisites | Basic Knowledge about Computers |
| Course Objective(s) | To help students to understand the implementation of language. This Programming language helps in solving a problem. |
| Course Outcome(CO) | The students will be able to: <ol style="list-style-type: none">1. Illustrate flow charts and develop C programs.2. Develop conditional and iterative statements to write C programs and use user-defined functions to solve real-time problems.3. Write C programs that use pointers to access arrays, strings, and functions.4. Use user-defined data types, including structures and unions, to solve problems. |

SYLLABUS

1. Write and execute programs to show the working of input/output statements.
2. Write and execute programs to demonstrate the use of different types of operators (arithmetic, relational, logical, and conditional).
3. Write and execute programs based on conditional control statements (if, if-else).
4. Write and execute programs based on switch-case statements.
5. Write and execute programs based on for loops.
6. Write and execute programs based on while loops.
7. Write and execute programs based on jumping control statements (break, continue).
8. Write and execute programs to implement one-dimensional arrays.

Programme Code: UG018

| | |
|-----------------------------|---|
| Course Code | ME105 |
| Course Title | Workshop/Manufacturing Practices |
| Programme | ES |
| L T P | 0 0 6 |
| Credits | 3 |
| Course Prerequisites | +2 Physics and Mathematics |
| Course Objectives | Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using Different materials. |
| Course Outcome(CO) | CO1: Understanding different manufacturing techniques and their relative advantages/ disadvantages with respect to different applications with selection of a suitable technique for meeting a specific fabrication need. CO2: Acquire a minimum practical skill with respect to the different manufacturing methods and develop the confidence to design and fabricate small components for their project work. CO3: Introduction to different manufacturing methods in different fields of engineering. CO4: Practical exposure to different fabrication techniques and Creation of simple components using different materials. |

1. Manufacturing Methods-casting, forming, machining, joining, advanced manufacturing methods
2. Fitting operations and power tools
3. Electrical and Electronics
4. Carpentry
5. Metal casting
6. Welding (arc welding and gas welding), brazing

SYLLABUS

Programme Code: UG018

WORKSHOP PRACTICE

1. Machine shop
2. Fitting shop
3. Carpentry
4. Electrical and Electronics
5. Welding shop
6. Casting
7. Smithy

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

| Course Code | PHY107 |
| Course Title | Engineering Physics Practical |
| Type of course | Practical |
| L T P | 0:0:2 |
| Credits | 1 |
| Course prerequisite | 10+2 with physics as core subject. |
| Course Objectives | The aim of the subject is to enhance the Practical knowledge of students about various aspects of fundamental of physics including mechanics, optics, wave optics, quantum mechanics; solid-state physics and its applications. |
| Course Outcome(CO) | Students will be able to: CO1: Measure the Magnetic effects along axis of circular coil, magnetic dipole moment of a bar magnet. CO2: Infer the characteristics, wavelength & diffraction of laser beam using Michels on interferometer, grating elements. CO3: determine numerical aperture, attenuation and propagation losses in optical fiber, various crystal structures, polarizability of a dielectric substance. CO4: Determine the resistivity, band gap of semiconductor materials. |

* **Note:** Perform at least 12–14 experiments from the list given below.

1. To study the variation of magnetic field with distance along the axis of a circular coil carrying current.
2. To determine the magnetic dipole moment of a bar magnet and horizontal intensity of earth's magnetic field using a deflection galvanometer.
3. To study B-H curve using CRO.
4. To study the laser beam characteristics like divergence using diffraction grating aperture.
5. To determine the wavelength of a laser using Michelson interferometer.
6. To study diffraction using laser beam and thus to determine the grating element.
7. To find the refractive index of a material using spectrometer.
8. To find the refractive index of a liquid using a hollow prism and spectrometer.
9. To determine the numerical aperture of an optical fiber.
10. To determine attenuation and propagation losses in optical fibers.
11. To study various crystal structures.
12. To find out polarizability of a dielectric substance.
13. To set up and observe Newton's rings.
14. To determine energy band gap of a semiconductor.

Programme Code: UG018

15. To determine the number of lines per millimeter of the grating using the green line of the mercury spectrum.
16. To calculate the wavelength of other prominent lines of mercury by normal incidence method.
17. To find the acceleration of the cart in the simulator (Newton's 2nd law).
18. To determine the resistivity of semiconductors by four-probe method.

| Course Objective(CO) | <p>The objectives of Engineering Chemistry are to:</p> <p>Relate the students with basic concepts of chemistry. Some new topics have been introduced to the syllabus for the development of the right attitudes by the engineering students to cope with new technology</p> |
| Course Outcomes | <p>The course will enable the student to:</p> <p>CO1: Analyze microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces. Rationalize bulk properties and processes using thermodynamic considerations.</p> <p>CO2: Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.</p> <p>CO3: Rationalize periodic properties such as ionization potential, electronegativity, oxidation states, and related chemical behavior.</p> <p>CO4: List major chemical reactions that are used in the synthesis of molecules.</p> |

SYLLABUS

UNIT-I: Atomic and Molecular Structure

Schrödinger equation, particle in a box solutions, and their applications for conjugated molecules and nanoparticles. Forms of the hydrogen atom wavefunctions and the plots of these functions to explore their spatial variations. Molecular orbitals of diatomic molecules and plots of the multi-center orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomics. Pi-molecular orbitals of butadiene and benzene and aromaticity. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures.

UNIT-II: Spectroscopic Techniques and Applications

Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules and their applications. Nuclear

ProgrammeCode: UG018

magnetic resonance and magnetic resonance imaging. Surface characterization techniques, diffraction, and scattering.

Intermolecular Forces and Potential Energy Surfaces:

Ionic, dipolar, and Van der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H_3 , H_2F , and HCN and trajectories on these surfaces.

UNIT-III: Thermodynamics and Periodic Properties

Use of Free Energy in Chemical Equilibria: Thermodynamic functions: energy, entropy, and free energy.

Estimations of entropy and free energies. Free energy and emf, cell potentials, the Nernst equation, and applications. Acid-base, oxidation-reduction, and solubility equilibria. Water chemistry and corrosion. Use of free energy considerations in metallurgy through Ellingham diagrams.

Periodic Properties: Effective nuclear charge, penetration of orbitals, variations of s, p, d, and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard-soft acids and bases, and molecular geometries.

UNIT-IV: Stereochemistry and Organic Reactions

Stereochemistry: Representations of 3-dimensional structures, structural isomers and stereoisomers, configurations, symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations, and conformational analysis. Isomerism in transitional metal compounds.

Organic Reactions and Synthesis of a Drug Molecule: Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization, and ring openings. Synthesis of a commonly used drug molecule.

| Course prerequisite | +2 with Non-Medical, B.TechIst semester |
| Course Objective | The objective of this course is to familiarize the students with statistical techniques. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in the discipline. |
| Course Outcome(CO) | By the end of the course, students will be able to: CO1 understand the notion of probability and random variables and various discrete and continuous probability distributions and their properties. CO2 apply the basics of statistics including measures of central tendency, correlation and regression in the problems related to the discipline. CO3 use the statistical methods of studying data samples. |

SYLLABUS

UNIT-I: Matrices

Linear Systems of Equations; Linear Independence; Rank of a Matrix; Determinant, Inverse of a matrix, System of linear equations; Symmetric, skew-symmetric and orthogonal matrices.

Determinants; Eigenvalues and eigenvectors; Cayley-Hamilton Theorem (without proof).

UNIT-II: First order ordinary differential equations

Exact, linear and Bernoulli's equations. Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type.

UNIT-III: Ordinary differential equations of higher orders

Second order linear differential equations with variable coefficients: Euler-Cauchy equations, solution by variation of parameters; Power series solutions: Legendre's equations and Legendre polynomials, Frobenius method.

UNIT-IV: Complex Variables

ProgrammeCode: UG018

Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate; elementary analytic functions (exponential, trigonometric, logarithm) and their properties.

Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy Integral formula (without proof); Taylor's series, zeros of analytic functions, Laurent's series; Cauchy Residue theorem (without proof).

Recommended books:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 10 th Edition, John Wiley & Sons, 2006.
2. S. L. Ross, Differential Equations, 3 rd Edition, Wiley India, 1984.
3. E. A. Coddington, An Introduction to Ordinary Differential Equations, Prentice Hall India, 1995.
4. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008.
5. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36 th Edition, 2010.

| Course Pre-requisites | NIL |
| Course objectives | To prepare you to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability to prepare you to communicate effectively to prepare you to use the Techniques, skills and modern engineering tools necessary for engineering practice. |
| Course outcome(CO) | By the end of the course, students will be able to learn: CO1: Introduction to engineering design and its place in society and engineering communication. CO2: Exposure to visual aspects and engineering graphics of engineering design standard, exposure to solid modeling CO3: Exposure to computer aided geometric design creating working drawings. |

Syllabus

UNIT-I

Introduction to Engineering Drawing

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales—Plain, Diagonal and Vernier Scales.

Orthographic Projections

Principles of Orthographic Projections-Conventions – Projections of Points and lines inclined to both planes; Projections of planes inclined to Planes—Auxiliary Planes;

UNIT-II

Projections of Regular Solids

Inclined to both the Planes- Auxiliary Views; Draw simple annotation, dimensioning and

ProgrammeCode: UG018

The course includes floor plans that feature windows, doors, and fixtures such as WC, bath, sink, and shower. It covers sections and sectional views of right-angular solids, including prism, cylinder, pyramid, and cone, along with auxiliary views. Students will study the development of surfaces of right regular solids—prism, pyramid, cylinder, and cone—and draw sectional orthographic views of geometrical solids, industrial objects, and dwellings from foundation to slab.

UNIT-III

IsometricProjections

Principles of isometric projection, including isometric scale, isometric views, and conventions. Isometric views of lines, planes, and simple and compound solids are covered, along with the conversion of isometric views to orthographic views and vice versa, following standard conventions.

Overview of Computer Graphics listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.; Isometric Views of lines, Planes, Simple and compound Solids];

UNIT-IV

Customization & CAD Drawing consisting of set up of the drawing page and the printer, including scale settings, Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerancing; Orthographic constraints, Snap to objects manually and automatically; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles;

Annotations, layering & other Functions applying dimensions to objects, applying annotations to drawings; Setting up and use of Layers, layers to create drawings, Create, edit and use customized layers; Changing line lengths through modifying existing lines (extend/lengthen); Printing documents to paper using the print command; orthographic projection techniques; Drawing sectional views of composite right regular geometric solids and project the true shape of the sectioned surface; Drawing annotation, Computer-aided design (CAD) software modeling of parts and assemblies. Parametric and non-parametric solid, surface, and wireframe models. Part editing and two-dimensional documentation of models. Planar projection theory, including sketching of perspective, isometric, multiview, auxiliary, and section views. Spatial visualization exercises. Dimensioning guidelines, tolerancing techniques; dimensioning and scale multiviews Of dwelling;

Demonstration of a Simple Team Design Project that Illustrates Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids; meshed topologies for engineering analysis and tool-path generation for component manufacture; geometric dimensioning and tolerancing; Use of solid-modeling software for creating associative models at the component and assembly levels; floor plans that include: windows, doors, and fixtures such as WC, bath, sink,

ProgrammeCode: UG018

shower, etc. Applying colour coding according to building drawing practice; Drawing sectional elevation showing foundation to ceiling; Introduction to Building Information Modelling (BIM).

Study the working principles of electrical machines and power converters3. Introduce the components of low voltage electrical installations |

Syllabus

UNIT-I

DC Circuits Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with DC excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

UNIT-II: AC Circuits

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three-phase balanced circuits, voltage and current relations in star and delta connections.

UNIT-III: Transformers

Magnetic materials, B-H characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections.

UNIT-IV: Electrical Machines

Generation of rotating magnetic fields, construction and working of a three-phase induction motor, significance of torque-slip characteristic. Loss components and efficiency, starting and speed.

ProgrammeCode: UG018

Control of induction motor. Single-phase induction motor. Construction, working, torque-speed characteristic and speed control of separately excited DC motor. Construction and working of synchronous generators.

Power Converters

DC-DC buck and boost converters, duty ratio control. Single-phase and three-phase voltage source inverters; sinusoidal modulation.

Electrical Installations

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB. Types of wires and cables, earthing. Types of batteries, important characteristics for batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

| Course Prerequisites | NA |
| Course Objective(s) | <ol style="list-style-type: none">1. Comprehend the core principles of the Indian knowledge system, including health, spirituality, and cultural preservation.2. Explore the contributions of ancient Indian mathematicians to number systems, geometry, and astronomy. |
| Course Outcome (CO) | The students will be able to: <ol style="list-style-type: none">1. Students will grasp the essence of the Indian knowledge system, encompassing health, mathematics, and cultural heritage.2. Upon completion, students will appreciate the influence of ancient Indian texts, mathematicians, and cultural practices on contemporary society. |

SYLLABUS

UNIT 1:

Overview of Indian Knowledge System: Introduction to Indian knowledge system, its uniqueness; Vedic literature: Rigveda, Samaveda, Yajurveda, Atharvaveda; Ayurveda: holistic health principles, natural remedies; Yoga, meditation: physical, mental well-being; Art, architecture: monuments, preservation of cultural heritage.

UNIT 2:

Scientific and Mathematical Contributions: Introduction to science and math; Ancient Indian mathematicians: Aryabhata, Brahmagupta, Bhaskara; Number systems, invention of zero, basic arithmetic; Geometry, trigonometry: shapes, angles, trigonometric ratios; Astronomy, calendar systems, ancient Indian discoveries.

UNIT 3:

Simple Philosophical Ideas: Importance of Kindness, Power of Imagination, Respect for Nature, Golden Rule, Mindfulness and Self-awareness, Curiosity and Asking Questions, Journey of Learning, Gratitude and Appreciation, Value of Friendship, Power of Positive Thinking, Existence of Truth, Ethics and Morality, Importance of Justice, and Nature of Reality

UNIT 4:

Art, Culture, and Society Made Simple: Traditional Indian Festivals, Indian Folk Dances, Indian Classical Music, Indian Clothing Styles, Indian Cuisine, Indian Mythology, Traditional Indian Art Forms, and Historical Monuments, Languages of India, and Indian Wildlife and Nature, Family Structure in India, Caste System, Education System, Indian Weddings, Role of Women in Indian Society, Religious Diversity, Rural vs. Urban Life, Social Issues, Traditional Occupations, and Community Celebrations.

| | |
|---------------------------|---|
| Course Code | CHM107 |
| Course Title | Engineering Chemistry Practical |
| Type of course | BS |
| LTP | 002 |
| Credits | 1 |
| Course Objectives | The chemistry laboratory course will consist of experiments illustrating the principles of chemistry relevant to the study of science and engineering. |
| Course Outcome(CO) | The students will learn to: 1. Estimate rate constants of reactions from concentration of reactants/product as a function of time 2. Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc 3. Synthesize a small drug molecule and analyze a salt sample. |

SYLLABUS

List of Experiment (Choice of 10-12 experiments from the following)

1. Determination of surface tension and viscosity of liquids.
2. Determination of viscosity of oil by means of Red Wood Viscometer.
3. Thin layer chromatography: Determination of RF value of a mixture by TLC.
4. Separation of methyl orange and phenolphthalein from given mixture by paper chromatography.
5. Ion exchange column for removal of hardness of water / Determination of total hardness of water by EDTA method.
6. Determination of Total Residual Chlorine in water sample.
7. Colligative properties using freezing point depression.
8. Determination of the rate constant of a reaction.
9. Determination of cell constant and conductance of solutions.
10. Potentiometry – determination of redox potentials and EMFs.
11. Determine the strength of a solution pH metrically.
12. Synthesis of a polymer/drug: Preparation of Urea Formaldehyde Resin.
13. Synthesis of paracetamol.
14. To bring catalysed condensation or to prepare a pure sample of dibenzalpropane.
15. Saponification / acid value of an oil.
16. Chemical analysis of a salt.
17. Lattice structures and packing of spheres.
18. Models of potential energy surfaces.
19. Chemical oscillations – Iodine clock reaction.
20. Determination of the partition coefficient of a substance between two immiscible liquids.
21. Adsorption of acetic acid by charcoal.
22. Use of the capillary viscosity meters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

ProgrammeCode: UG018

|------------------------------|---|
| Course Code | EE104 |
| Course Title | Basic Electrical Engineering Laboratory |
| Type Of Course | ES |
| L T P | 002 |
| Credits | 1 |
| Course Pre-requisites | Basics of Electrical Engineering |
| Course objectives | To familiarize with various AC, DC circuits, Transformer, Electrical Machine and Measuring Instruments |
| Course outcome(CO) | <p>By the end of the course, students will be able to:</p> <p>CO1: Get an exposure to common electrical components and their ratings.</p> <p>CO2: Make electrical connections by wires of appropriate ratings.</p> <p>CO3: Understand the usage of common electrical measuring instruments.</p> <p>CO4: Understand the basic characteristics of transformers and electrical machines.</p> <p>CO5: Get exposure to the working of power electronic converters..</p> |

List of experiments/demonstrations:

1. Basic safety precautions. Introduction and use of measuring instruments – voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors, and inductors.
2. Measuring the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady-state response of R-L and R-C circuits – impedance calculation and verification. Observation of phase differences between current and voltage. Resonance in R-L-C circuits.
3. Transformers: Observation of the no-load current waveform on an oscilloscope (non-sinusoidal wave shape due to B-H curve nonlinearity should be shown along with a discussion about harmonics). Loading of a transformer: measurement of primary and secondary voltages and currents, and power.
4. Three-phase transformers: Star and Delta connections. Voltage and current relationships (line-to-line voltage, phase-to-neutral voltage, line and phase currents). Phase shifts between the primary and secondary side. Cumulative three-phase power in balanced three-phase circuits.
5. Demonstration of cut-out sections of machines: DC machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winding–slip ring arrangement), and single-phase induction machine.
6. Torque-Speed Characteristic of separately excited DC motor.
7. Synchronous speed of two- and four-pole, three-phase induction motors. Direction reversal by change of phase-sequence of connections. Torque-Slip Characteristic of an induction motor. Generator operation of an induction machine driven at super-synchronous speed.

ProgrammeCode: UG018

Synchronous Machine operating as a generator: stand-alone operation with a load. Control of voltage through field excitation.

8. Demonstration of (a) DC-DC converters, (b) DC-AC converters – PWM waveform, (c) the use of DC-AC converter for speed control of an induction motor, and (d) components of LT switchgear.

| Course Code | CSE251 |
| Course Title | Computer Organization and Architecture |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Basic knowledge of computers and its components |
| Course Objectives | To expose the students to the following: 1. Understand the internal structure and operation of digital computers. 2. Learn instruction set architecture and its impact on processor design. 3. Explore memory hierarchy, I/O systems, and performance optimization. 4. Develop skills to design and analyze CPU components and control units. |
| Course Outcome(CO) | The learner will be able to- 1. Explain the basic structure and functional units of a computer system. 2. Design and analyze instruction formats, addressing modes, and control units. 3. Evaluate performance trade-offs in memory and I/O systems. 4. Apply pipelining and parallel processing techniques in processor design. |

Syllabus

Unit I: Basic Computer Organization

- Introduction to digital computers and Von Neumann architecture
- Functional units: ALU, control unit, memory, I/O
- Instruction cycle, timing and control
- Memory reference instructions, interrupts
- Register Transfer Language (RTL) and micro-operations

Unit II: CPU Design & Microprogramming

- General register organization
- Instruction formats and addressing modes
- Stack organization and program control
- Microprogrammed control: control memory, address sequencing
- Hardwired vs microprogrammed control units

ProgrammeCode: UG018

Unit III: Memory Organization

- Memory hierarchy: cache, main, virtual, and secondary memory
- Associative memory and mapping techniques
- Cache performance and replacement policies
- Virtual memory: paging and segmentation
- RAID and memory management hardware

Unit IV: I/O Systems & Parallel Processing

- I/O interface and data transfer modes
- DMA, interrupt-driven I/O, and programmed I/O
- Pipelining: instruction and arithmetic pipelines
- RISC vs CISC architectures
- Vector processing and multiprocessor systems

| Course Prerequisites | Basic knowledge of C language and C++ language |
| Course Objectives | This course work provides the thorough understanding of the Linear and Non-Linear Data Structures insolving problems and to give the idea of the efficiency of various algorithms. |
| Course Outcome (CO) | <p>The learner will be able to–</p> <ol style="list-style-type: none"> 1. For a given algorithm student will able to analyze the algorithms to determine the time and computation complexity and justify the correctness. 2. For a given Search problem (Linear Search and Binary Search) student will able to implement it. 3. For a given problem of Stacks, Queues and linked list student will able to implement it and analyze the same to determine the time and computation complexity. 4. Student will able to write an algorithm Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort and compare their performance in term of Space and Time complexity. 5. Student will able to implement Graph search and traversal algorithms and determine the time and computation complexity. |

Syllabus

UNIT-I

Introduction: Basic Terminologies: Elementary Data Organizations, Data Structure Operations: insertion, deletion, traversal etc.; Analysis of an Algorithm, Asymptotic Notations, Time-Space trade off. **Searching:** Linear Search and Binary Search Techniques and their complexity analysis.

UNIT-II

Stacks and Queues: ADT Stack and its operations: Algorithms and their complexity analysis, Applications of Stacks: Expression Conversion and evaluation– corresponding algorithms and complexity analysis. ADT queue, Types of Queue: Simple Queue, Circular Queue, Priority Queue; Operations on each type of Queues: Algorithms and their analysis.

ProgrammeCode: UG018

UNIT-III

Linked Lists: Singly linked lists: Representation in memory, algorithms of several operations: traversing, searching, insertion into, deletion from linked list; linked representation of Stack and Queue, header nodes, doubly linked list: operations on it and algorithmic analysis; Circular Linked Lists: all operations, their algorithms and the complexity analysis.

Trees: Basic tree terminologies, different types of trees: Binary Tree, Threaded Binary Tree, Binary Search Tree, AVL Tree; tree operations on each of the trees and their algorithms with complexity analysis. Applications of Binary Trees. B Tree, B+ Tree: definitions, algorithms and analysis.

UNIT-IV

Sorting and Hashing: Objective and properties of different sorting algorithms: Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort; performance and comparison among all the methods, Hashing.

Graph: Basic terminologies and representations, graph search and traversal algorithms, and complexity analysis.

| Course Objectives | <p>To learn the fundamentals of Operating Systems.</p> <ol style="list-style-type: none">1. To learn the mechanisms of OS to handle processes and threads and their communication.2. To learn the mechanisms involved in memory management in contemporary OS.3. To gain knowledge on distributed operating system concepts that includes architecture, mutual exclusion algorithms, deadlock detection algorithms, and agreement protocols.4. To know the components and management aspects of concurrency management.5. To learn to implement simple OS mechanisms. |
| Course Outcome (CO) | <p>The learner will be able to-</p> <ol style="list-style-type: none">1. Create processes and threads.2. Develop algorithms for process scheduling for a given specification of CPU utilization, throughput, turnaround time, waiting time, and response time.3. For a given specification of memory organization, develop the techniques for optimally allocating memory to processes by increasing memory utilization and for improving the access time.4. Design and implement file management system.5. For a given I/O devices and OS (specify), develop the I/O management functions in OS as part of a uniform device abstraction by performing operations for synchronization between CPU and I/O controllers. |

SYLLABUS

UNIT-I

Introduction: Operating Systems functions, Types of operating systems, Multi programming systems, Batch systems, Time-sharing systems, Operating system operations, Special purpose operating systems, distributed systems, Different computing environments.

ProgrammeCode: UG018

UNIT-II

Operating System Organization: Processor and user modes, user operating system interface, Kernels, System calls and its types, System programs, Operating system structures, Virtual machines.

Process Management: Process states, Process Scheduling, Process hierarchy, Threads, Threading issues, Multi-threading models, Non-pre-emptive and pre-emptive scheduling algorithms, Concurrent processes, Critical section, Semaphores, methods for inter-process communication, Deadlocks.

UNIT-III

Memory Management: Physical and virtual address space, Memory allocation strategies, Paging, Segmentation, Virtual memory and Demand paging, Page replacement algorithms.

File and I/O Management: Directory structure, File operations, Files system mounting, File allocation methods, Device management, Disk scheduling algorithms.

UNIT-IV

OS and Security: Security breaches, types of attacks, attack prevention methods, security policy and access control, OS design considerations for security, access control lists and OS support, internet and general network security, Policy mechanism, Program, network and system threats, Authentication.

Case Study: UNIX and LINUX operating systems

SYLLABUS

UNIT-I

Introduction : Introduction, History, Versions, Installation, Environment Variables, Command Line Execution, IDLE, Script mode and Batch mode, Editing Files, Documentation, Help, Dynamic Types, Reserved Words, Naming Conventions, Typing, id(), isinstance(), Indentation, Basic Syntax, Comments, Datatype, String Values, String Methods, String formatting Method (f string,% method, and format method), String Operators, Data typecasting, Simple Output, Simple Input, print Function.

UNIT-II

Control Structures: Indenting Requirements, Code Formatting Standards, Whitespace and Code Readability, Coding Style Guidelines, Nested if Statements, Ternary Operator, Truthy and Falsy Values, Operator Precedence and Associativity, Bitwise Shift Operators, Bitwise Operations, Masking and Bitwise Flags, Infinite Loops, Loop Termination Conditions, Do-While Loop, Loop Control Statements, break and continue, Exiting Nested Loops, Use Cases, Best Practices, Iterating Over Collections, Range-Based for Loops, Loop Indexing and Iteration Patterns

UNIT-III

Functions and Modules: Introduction, Defining Your Own Functions, Pass, Parameters, Function Documentation, Keyword and Optional Parameters, Passing Collections to a Function, Variable Number of Arguments, Scope, Functions - "First Class Citizens", Passing Functions to a Function, map, filter, Mapping Functions in a Dictionary, Lambda, Modules and Importing, Creating Modules, Using Standard Library Modules, Module Search Path, Importing from Packages, Namespace and Module Attributes.

Exception: Errors, Runtime Errors, The Exception Model Exception Hierarchy, Handling Multiple Exceptions, Raise, assert

UNIT-IV

Classes in Python: Classes in Python, Principles of Object Orientation, Creating Classes, Constructor, Constructor Overloading, Instance Methods, Static Method, Self Keyword, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism

| | |
|-----------------------------|---|
| CourseCode | MAT271 |
| CourseTitle | Engineering Mathematics–III |
| Type of course | Core(Theory) |
| L T P | 4 0 0 |
| Credits | 4 |
| Courseprerequisite | +2Mathematics,EngineeringMathematics-I,EngineeringMathematics- II |
| CourseObjective (CO) | Thiscourseisanintroductiontoabroadrangeofmathematical techniques for solving problems that arise in Science and Engineering. The goal is to provide a basic understanding ofthe derivation,analysis and use of these techniques. |
| Course Outcome(CO) | Bytheendofthecourse,students willbe able to: CO1Acquaint withthederivativeoffunctionsofmorethanone variable and the concept of Maxima & Minima. CO2Find double integralsand applythe ideain certainproblems arising in the engineering. CO3Touseeffectivemathematicaltools forthesolutionsof differential equations that model physical processes |

UNIT-I: Fourier series

Definition of Fourier series, Orthogonal and orthonormal functions, Fourier series with arbitrary period, in particular periodic function with period 2, Fourier series of even and odd function, half range Fourier series.

UNIT II: Laplace Transform and Applications

Introduction, Definition of the Laplace transform, Useful properties of Laplace transform (without proof): Linearity, Frist shifting theorem, Multiplication and division by t, transforms of derivatives and integrals, Heaviside unit step function, Dirac’s delta function, second shifting theorem, Laplace transform of Periodic function, Inverse Laplace transform using partial fraction and Convolution theorem (without proof).

UNIT III: Partial Differential Equations

Definition of Partial Differential Equations, First order partial differential equations, solutions of first Order linear PDEs; Solution to homogenous linear partial differential equations of second order by complimentary function and particular integral method. Second-order linear equations and their classification, Initial and boundary conditions, D` Alembert solution of the wave equation.

UNIT IV: Basic Statistics

Measures of Central Tendency- Mean, Median, Mode, Dispersion, Correlation and regression, Curve fitting by method of least squares-fitting of straight lines, second degree parabola and more general curves.

Recommended books:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 10 th Edition, John Wiley & Sons2006.
2. S. L. Ross, Differential Equations, 3 rd Edition, Wiley India, 1984.
3. N.P. Bali and Manish Goyal, A textbook of Engineering Mathematics, Laxmi Publications.
4. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36 th Edition, 2010.

| | |
|-----------------------------|---|
| Course Code | CSE261 |
| Course Title | Computer Organization and Architecture Laboratory |
| Type of Course | PC |
| L T P | 002 |
| Credits | 1 |
| Course Prerequisites | Basic knowledge of computer and its components |
| Course Objectives | <ol style="list-style-type: none"> 1. Understand the architecture and instruction set of microprocessors (especially 8085/8086). 2. Develop assembly language programs for arithmetic, logical, and control operations. 3. Explore memory interfacing, I/O operations, and interrupt handling. 4. Strengthen low-level programming and debugging skills. |
| Course Outcome(CO) | <p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Write and execute assembly language programs for basic arithmetic and logical operations. 2. Interface peripheral devices and demonstrate control over serial communication. 3. Analyze and debug low-level programs using simulators and hardware kits. 4. Apply interrupt handling and memory operations in real-time scenarios. |

SYLLABUS

List of Experiments

1. Multiplication and division of 8-bit numbers
2. Finding largest/smallest number in an array
3. Sorting array in ascending/descending order
4. Interrupt service routine implementation
5. Interfacing 8251 USART and initializing serial communication
6. Factorial computation using loops
7. Counting number of 1's in a byte
8. Reversing an array stored in memory
9. Logical operations using AND, OR, XOR
10. 16-bit operations using LXI and DAD instructions

| | |
|-----------------------------|--|
| Course Code | CSE263 |
| Course Title | Data Structure and Algorithms Laboratory |
| Type of Course | PC |
| L T P | 0 0 2 |
| Credits | 1 |
| Course Prerequisites | Knowledge of C++ Programming Language |
| Course Objectives | Allows the students to understand the implementation of data structures. |
| Course Outcome(CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Design and analyze the time and space efficiency of the data structure. 2. Identify the appropriate data structure for given problem. 3. Gain practical knowledge on the applications of data structures. |

SYLLABUS

Laboratory Experiments-

1: Sequential Arrays

- 1.1: Insert a new element at end as well as at a given position.
- 1.2: Delete an element from a given array whose value is given or whose position is given.
- 1.3: To find the location of a given element.
- 1.4: To display the elements of the linear array.

2: Linear Linked Lists

- 2.1: Insert a new element.
- 2.2: Delete an existing element.
- 2.3: Search an element.
- 2.4: Display all the elements.

3: Stacks and Queues

- 3.1: Program to demonstrate the use of stack.
- 3.2: Program to demonstrate the implementation of various operations on a linear queue represented using a linear array.
- 3.3: Program to demonstrate the implementation of various operations on a circular queue represented using a linear array.
- 3.4: Program to demonstrate the implementation of various operations on a queue represented using a linear linked list (linked queue).

4: Sorting and Searching

4.1: Program to sort an array of integers in ascending order using bubble sort.

4.2: Program to sort an array of integers in ascending order using selection sort.

4.3: Program to sort an array of integers in ascending order using insertion sort.

4.4: Program to demonstrate the use of linear search to search a given element in an array.

4.5: Program to demonstrate the use of binary search to search a given element in a sorted array in ascending order.

| Course Code | CSE265 |
| Course Title | Computer Programming using python laboratory |
| Type of Course | PC |
| L:T:P | 0:0:2 |
| Credits | 1 |
| Course Prerequisites | NA |
| Course Objective(s) | <ol style="list-style-type: none"> 1. To understand and perform python installation. 2. To create python scripts using variable, data types and operators. 3. To write programs on string manipulation, control structures and data structures. 4. To implement programs in python using functions, modules and object oriented programming concepts 5. To handle programs using file and exceptions |
| Course Outcome(CO) | <p>The learner will be able to:</p> <ol style="list-style-type: none"> 1. Understand and perform python installation. 2. Create python scripts using variable, data types and operators. 3. Write programs on string manipulation, control structures and data structures. 4. Implement programs in python using functions, modules and object oriented programming concepts 5. Handle programs using file and exceptions |

LIST OF EXPERIMENTS

1. **Installation and Environment Setup:** Install Python on your system and set up environment variables. Write a simple Python script and execute it using command line.
2. **Basic Syntax and Datatypes:** Create Python scripts to demonstrate basic syntax, including variables, data types, and operators. Experiment with different data types such as integers, floats, strings, lists, tuples, sets, and dictionaries.
3. **String Manipulation:** Write Python programs to demonstrate various string manipulation techniques, including string methods, formatting methods, and string operators.
4. **Control Structures:** Implement Python programs to practice control structures like if-else statements, nested if statements, loops (for, while), loop control statements (break, continue), and loop termination conditions.
5. **Data Structures:** Write Python programs to understand and utilize different data structures such as lists, tuples, sets, dictionaries, and demonstrate their access methods and built-in functions.
6. **Functions and Parameters:** Create Python functions with different parameter types (positional, keyword, default, and variable-length) and demonstrate their usage.

7. **Lambda Functions and Functional Programming:** Practice using lambda functions, map, and filter functions for functional programming tasks like applying transformations and filtering elements.
8. **Modules and Importing:** Develop Python modules with functions and import them into other scripts. Experiment with importing standard library modules and modules from packages.
9. **Exception Handling:** Write Python programs to handle exceptions gracefully using try-except blocks, raise statements, and assert statements.
10. **Object-Oriented Programming (OOP):** Implement Python classes with attributes, methods, constructors, and demonstrate concepts like inheritance, polymorphism, and class variables.
11. **Static Methods and Class Methods:** Create Python classes with static methods and class methods and demonstrate their usage.
12. **File Handling:** Write Python programs to read from and write to files, handle file objects, and practice different file handling techniques.
13. **Exception Handling in Classes:** Develop Python classes that raise and handle exceptions internally, demonstrating error handling within class methods.

| Course Title | Operating System Laboratory |
| Type of Course | PC |
| L T P | 002 |
| Credits | 1 |
| Course Prerequisites | Knowledge of Operating System,DOS Commands |
| Course Objectives | To provide the understanding of the operating system operation and inter-process communication. |
| Course Outcome-(CO) | <p>The learner will be able to:</p> <ol style="list-style-type: none"> 1. Understand and execute basic commands of shell script. 2. Apply basic operations in shell scripts which are required for different applications. 3. Identify and understand the concept of file systems in shell script. 4. Apply the concept of creating a new process from a parent process. |

LIST OF PRACTICALS

1. Simulation of the CPU scheduling algorithms:
 - a) Round Robin
 - b) SJF
 - c) FCFS
 - d) Priority
2. Simulation of continuous memory management allocation techniques:
 - a) First Fit
 - b) Bes tFit
 - c) Wors tFit
3. Simulation of page Replacement Algorithms:
 - a) FIFO
 - b) LRU
 - c) OPT
4. Simulation of file allocation Strategies:
 - a) Sequential
 - b) Indexed
 - c) Linked
5. Simulation of file organization techniques:
 - a) Single Level Directory

b) Two Level6: UNIX Commands
7: Reading fromfile, Writingintoafile, FileCreation

4th SEMESTER

| | |
|-----------------------------|--|
| Course Code | MAT272 |
| Course Title | Discrete Mathematics |
| Type of Course | BS |
| L T P | 4:0:0 |
| Credits | 4 |
| Course Prerequisites | +2 in any stream |
| Course objective(s) | To provide students with an overview of discrete mathematics. Students will learn about topics such as logic and proofs, sets and functions, probability, recursion, graph theory, matrices, Boolean algebra, and other important discrete math concepts. |
| Course Outcome(CO) | The students will be able to: <ol style="list-style-type: none"> 1. Use logical notation. 2. Perform logical proofs. 3. Apply recursive functions and solve recurrence relations. 4. Determine equivalent logic expressions. |

SYLLABUS

UNIT-I: Set, Relations, Functions

Operations and Laws of Sets, Cartesian Products, Binary Relation, Partial Ordering Relation, Equivalence Relation, Image of a Set, Sum and Product of Functions, Bijective functions, Inverse and Composite Function, Size of a Set, Finite and infinite Sets, Countable and Uncountable Sets, Cantor diagonal argument and The Power Set theorem.

Proof Methods and Strategies: Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency, Case analysis, Induction.

UNIT-II: Modular Arithmetic and Combinatorics.

Extended Euclid's Greatest Common Divisor algorithm, The Fundamental Theorem of Arithmetic,

Modular arithmetic, Coprimality (or Euler's totient function), Chinese Remainder Theorem.

Permutation & Combination, Inclusion- Exclusion, Pigeon-hole principle, Generating functions, Recurrence.

UNIT-III: Graphs and Logics

Connected components, Paths, Cycles, Trees, Hamiltonian/ Eulerian Walks, Coloring, Planarity, Matching. Languages of Propositional logic and First-order logic, expressing natural language sentences in languages of propositional and first-order logic, expressing natural language predicates in the language of first-order logic. Semantics of First-order logic: interpretation and its use in evaluating a formula.

UNIT-IV: Algebra & Discrete Probability

Group, Permutation Groups, Cosets, Normal Subgroups, Ring, Field, Finite fields, Fermat's little theorem. Discrete Sample Space, Probability Distribution, Random variables, Expectation, Variance, Bernoulli trials, Conditional probability & independence (Bayes' Theorem).

Text Books and References:

1. Singh, S.B., Discrete Mathematics, Khanna Book Publishing Company, New Delhi.
2. Liu, C. L., & Mohapatra, D. P. (2008). Elements of Discrete Mathematics. Tata McGraw-Hill.

| | |
|-----------------------------|---|
| Course Code | CSE252 |
| Course Title | Object Oriented Programming with C++ |
| Type of Course | PC |
| L T P | 4:0:0 |
| Credits | 4 |
| Course Prerequisites | Basic Knowledge about Computers |
| Course Objective(s) | o gain experience about structured programming. To help students to understand the implementation of Programming Language. To understand various features in Programming Language. |
| Course Outcome(CO) | The students will be able to: <ol style="list-style-type: none"> 1. Understand how C++ improves C with object-oriented features. 2. Learn how to write inline functions for efficiency and performance. 3. Learn the syntax and semantics of the C++ Programming language. 4. Learn how to design C++ classes for code reuse. |

SYLLABUS

UNIT-I:

Basics: Introduction to C++, Tokens, Identifiers, data types, control statements, functions, array, structure, union, pointers.

Classes and Objects: Classes, Structures and Classes, Unions and Classes are related, Friend Functions, Friend Classes, Inline Functions, Constructors and its types, Static Class Members, When Constructors and Destructors are executed, Scope Resolution Operator, Nested Classes, Local Classes, Passing and Returning Objects, Object Assignment, Arrays, Pointers, References and the Dynamic Allocation: Arrays of Objects, Pointers, References, Dynamic Allocation Operators, The Placement Forms of new and delete.

UNIT-II:

Function Overloading and Default Arguments: Function Overloading, Overloading Constructor Functions, Finding the Address of an Overloaded Function, Overload Anachronism, Default Arguments, Function Overloading and Ambiguity.

Operator Overloading: Creating Member Operator Function, Overloading Using a Friend Function, Overloading new and delete, Overloading Special Operators & Comma Operator.

UNIT-III:

Inheritance: Base-Class Access Control, Inheritance and protected members, Inheriting Multiple Base Classes, Constructors, Destructors and Inheritance, Granting Access, Virtual Base Classes.

Virtual Functions & Polymorphism: Virtual Functions, The Virtual Attribute is inherited, Virtual Functions are Hierarchical, Pure Virtual Functions, Using Virtual Functions, Early vs Late Binding.

Templates: Generic Functions, Applying Generic Functions, Generic Classes, Typename and export Keywords, Power of Templates.

UNIT-IV:

Exception Handling: Fundamentals, Derived-Class Exceptions, Options, terminate () and unexpected (), uncaught_exception (), exception and bad_exception Classes, Applying Exception Handling.

The C++ I/O System Basics: Old vs. Modern C++ I/O, Streams, Stream Classes, Formatted I/O, Overloading << and >>, Creating Manipulators.

| | |
|-----------------------------|---|
| Course Code | CSE254 |
| Course Title | Database Management Systems |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Elementary knowledge about computers including some experience using Windows. Basic knowledge about programming in some common programming language. |
| Course Objectives | <ol style="list-style-type: none">1. To understand the different issues involved in the design and implementation of a database system.2. To study the physical and logical database designs, database modeling, relational, hierarchical, and network models.3. To understand and use data manipulation language to query, update, and manage a database.4. To develop an understanding of essential DBMS concepts such as: database security, integrity, concurrency, distributed database, and intelligent database, Client/Server (Database Server), Data Warehousing.5. To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS. |
| Course Outcome(CO) | <p>The learner will be able to –</p> <ol style="list-style-type: none">1. For a given query, write relational algebra expressions for that query and optimize the developed expressions.2. For a given specification of the requirement, design the databases using ER method and normalization.3. For a given specification, construct the SQL queries for Open Source and Commercial DBMS – MYSQL, ORACLE, and DB2.4. For a given query, optimize its execution using query optimization algorithms.5. For a given transaction-processing system, determine the transaction atomicity, consistency, isolation, and durability.6. Implement the isolation property, including locking, time stamping based on concurrency control, and serializability of scheduling. |

SYLLABUS

UNIT-I

Introduction to Databases and Transactions: database system, purpose of database system, Filebased system, view of data, database architecture.

Data Models: The importance of data models, Basic building blocks, Business rules, The

ProgrammeCode: UG018

Evolution of data models, Degrees of data abstraction.

Database Design ER-Diagram: Database design and ER Model: overview, ER-Model, Constraints, ER-Diagrams, ERD Issues, weak entity sets, Codd's rules, Relational Schemas.

UNIT-II

Relational Algebra and Calculus: Relational algebra: introduction, Selection and projection, set operations, renaming, Joins, Division, syntax, semantics. Operators, grouping and ungrouping, relational comparison. Calculus: Tuple relational calculus, Domain relational Calculus, calculus vs algebra

Relational database Model: Logical view of data, keys, integrity rules. Relational Database design: features of good relational database design, atomic domain and Normalization.

UNIT-III

Constraints, Views and SQL: Database Languages, Constraints and its types, Integrity constraints, Views: Introduction to views, updates on views, comparison between tables and views SQL: data definition, aggregate function, Null Values.

UNIT-IV

Transaction management and Concurrency control: Transaction management: ACID properties, serializability and concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods, database recovery management

Database Security and Authorization: Introduction to Database Security Issues, Discretionary Access Control Based on Granting/Revoking of Privileges.

Advance Topic: OLAP, data mining, data warehouse, multimedia database, geographical database, spatialdatabase.

|-----------------------------|---|
| Course Type | MDC/ HS |
| Course Code | MDC019 |
| Course Title | Universal Human Values : Understanding Harmony |
| Type of course | Theory |
| L T P | 3 0 0 |
| Credits | 3 |
| Course Objective(s) | The main objective of this course is to: <ol style="list-style-type: none">1. Develop a universal perspective based on self- exploration about themselves (human being), family, society and nature.2. Understand the harmony in human relations.3. Strengthen the Self-Reflection.4. Develop commitment and courage. |
| Course Outcomes (CO) | After the completion of the course, students will be able: CO1: To become more aware of themselves, and their surroundings (family, society, nature). CO2: To become more responsible in life and in handling problems with sustainable solutions. CO3: To develop a sense of commitment and courage to act. |

SYLLABUS

UNIT-I

Need, Basic Guidelines, Content and Process for Value Education

1. Concept of Value Education including its needs, basic guidelines, content & process.
2. Concept of Self-Exploration, Natural Acceptance & Experiential Validation as the process for Self-Exploration.
3. Happiness & Prosperity.

UNIT-II

Understanding Harmony in Human Beings

1. Understanding Human Being as a Co-existence of Self (I) & Body.
2. Understanding the needs of self (I) & Body.
3. Understanding harmony of self (I) with Body: Sanyam & Swasthya.

UNIT-III

Understanding Harmony in Human Relationships

1. Need for and Importance of Values in Human Relationships.
2. Human Values to be practiced in a family.
3. Visualizing a Universal Human Order in Society.

UNIT-IV

Understanding Harmony in Nature & Existence

1. Need & Importance of Harmony in Nature.
2. Understanding the Interconnectedness among Four Orders of Nature.
3. Holistic Perception of Harmony at all levels of Existence.

Sessional work:

- Organize a group discussion regarding the ways and measures to inculcate values among individuals.

|-----------------------------|---|
| Course Code | AEC0015 |
| Course Title | Effective Technical Communication Skills |
| Type of Course | AEC/ HS |
| L T P | 2:0:0 |
| Credits | 2 |
| Course Prerequisites | General English |
| Course Objectives | Aims to teach oral and written skills in English with illustrations and examples drawn from project reports, paper presentations and published papers in scientific journals. The grammar exercises are not taught in a rule-based manner but through observation and use in specific contexts. Newspaper and popular scientific reports are also included as course material. Presentation skills will be taught through practice sessions. During the course, all participants make presentations and sympathize with the presentations. Emphasis is placed on teaching how to present the same findings orally and in writing. |
| Course Outcome (CO) | The learner will be able to: <ol style="list-style-type: none">1. Understand language skills.2. Use their technical writing and presentation skills effectively to draft business letters, email messages, faxes, and acceptance and rejection letters.3. Analyse the importance of LSRW (Listening, Speaking, Reading, and Writing) skills in communication.4. Enhance self-esteem and support personality development. |

SYLLABUS

UNIT-I

Information Design and Development – Different kinds of technical documents, information development life cycle, organizational structures, factors affecting information and document design, strategies for organization, information design and writing for print and for online media.

UNIT-II

Technical Writing, Grammar, and Editing – Technical writing process, forms of discourse, writing drafts and revising, collaborative writing, creating indexes, technical writing style and language. Basics of grammar, study of advanced grammar, editing strategies to achieve appropriate technical style. Introduction to advanced technical communication, usability, human factors, managing technical communication projects, time estimation, single sourcing, and localization.

ProgrammeCode: UG018

UNIT-III

Self-development and assessment – self-assessment, awareness, perception and attitudes, values and beliefs, personal goal setting, career planning, self-esteem. Managing time; personal memory, rapid reading, taking notes; complex problem solving; creativity.

UNIT-IV

Communication and Technical Writing- Public speaking, Group discussion, Oral; presentation, Interviews, Graphic presentation, Presentation aids, Personality Development. Writing reports, project proposals, brochures, newsletters, technical articles, manuals, official notes, business letters, memos, progress reports, minutes of meetings, event report.

UNIT-V

Ethics- Business ethics, Etiquettes in social and office settings, Email etiquettes, Telephone Etiquettes, engineering ethics, Managing time, Role and responsibility of engineering, Work culturing, Personalmemory,Rapidreading,Takingnotes,Complexproblemsolving, Creativity

| Course Code | CSE258 |
| Course Title | Computer Networks |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Basic knowledge of Computer, Digital Circuits, and Network Arrangement.. |
| Course Objectives (CO) | <ol style="list-style-type: none">1. To develop an understanding of modern network architectures from a design and performance perspective.2. To introduce the student to the major concepts involved in wide-area networks (WANs), local area networks (LANs), and Wireless LANs (WLANs).3. To provide an opportunity to do network programming.4. To provide WLAN measurement ideas. |
| Course out come | <p>The learner will be able to –</p> <ol style="list-style-type: none">1. Explain the functions of the different layers of the OSI Protocol.2. Draw the functional block diagram of wide-area networks (WANs), local area networks (LANs), and Wireless LANs (WLANs) and describe the function of each block.3. For a given requirement (small scale) of wide-area networks (WANs), local area networks (LANs), and Wireless LANs (WLANs), design it based on the market-available components.4. For a given problem related to TCP/IP protocol, develop the network programming.5. Configure DNS, DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP, SNMP, Bluetooth, Firewalls using open-source available software and tools. |

SYLLABUS

UNIT-I

Introduction to Computer Networks: Data Communication System and its components, Data Flow, Computer network and its goals, Types of computer networks: LAN, MAN, WAN, Wireless and wired networks, broadcast and point to point networks, Network topologies, Network software: concept of layers, protocols, interfaces and services, ISO-OSI reference model, TCP/IP reference model.

UNIT-II

Physical Layer: Introduction to Transmission Media: Twisted pair, Coaxial cable, Fiber optics, Wireless transmission (radio, microwave, infrared), switching: Circuit Switching, Message Switching, Packet Switching; their comparisons.

ProgrammeCode: UG018

Data Link Layer: Design issues, Framing, Error detection and correction codes: checksum, CRC, hamming code, Data link protocols for noisy and noiseless channels, Sliding Window Protocols: Stop Wait ARQ, Go- back-N ARQ, Selective repeat ARQ, Data link protocols: HDLC and PPP. Medium Access Sub-Layer: Static and dynamic channel allocation, Random Access: ALOHA, CSMA protocols, Controlled Access: Polling, Token Passing, IEEE802.3 frame format, Ethernet cabling, Manchester encoding, collision detection in 802.3, Binary exponential back off algorithm.

UNIT-III

Network Layer: Design issues, IPv4 classful and classless addressing, And subnetting, Routing algorithms: distance vector and link state routing, Congestion control: Principles of Congestion Control, Congestion prevention policies, Leaky bucket and token bucket algorithms.

Transport Layer: Elements of transport protocols: addressing, connection establishment and release, flow control and buffering, multiplexing and de-multiplexing, crash recovery, introduction to TCP/UDP protocols and their comparison.

UNIT-IV

Application Layer: World Wide Web (WWW), Domain Name System (DNS), E-mail, File Transfer Protocol (FTP), Introduction to Network security. Session & Presentation Layer

| 3 | Computer Networks (8 th Edition) | Andrew S. Tanenbaum | Pearson New International Edition |
| 4 | Internet networking with TCP/IP, Volume 1, 6 th Edition | Douglas Comer | Prentice Hall of India |
| 5 | TCP/IP Illustrated, Volume 1 | W. Richard Stevens, | Addison-Wesley, United States of America. |

| | |
|-----------------------------|---|
| Course Code | CSE260 |
| Course Title | Database Management System Laboratory |
| Type of Course | PC |
| L T P | 002 |
| Credits | 1 |
| Course Prerequisites | Knowledge of Program Development Constructs |
| Course Objectives | This practical course work allows the students to efficiently design a working of a model. |
| Course Outcome(CO) | The learner will be able to – <ul style="list-style-type: none"> 1. Understand, appreciate, and effectively explain the underlying concepts of database technologies. 2. Design and implement a database schema for a given problem domain. 3. Normalize a database. 4. Populate and query a database using SQL DML/DDI commands. 5. Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS. |

SYLLABUS

List of Practicals

1: Introduction To DBMS And Its Applications

1.1: Introduction to DBMS and its applications.

2: Study of SQL Statements

2.1: Data types, creating tables, retrieval of rows using SELECT statement, conditional retrieval of rows, ALTER and DROP statements.

2.2: Working with NULL values, matching a pattern from a table, ordering the result of a query, aggregate functions, grouping the result of a query, UPDATE and DELETE statements.

3: Operators

3.1: Arithmetic operators – ADD, SUBTRACT, MULTIPLY, DIVIDE.

3.2: Rename field.

3.3: Logical operations – AND, OR, NOT.

4: Other Operations

4.1: Aggregate functions – AVERAGE, MINIMUM, MAXIMUM, SUM, COUNT, COUNT(*).

4.2: Numeric functions – ABSOLUTE, POWER, SQRT, ROUND.

4.3: String functions – LOWER, UPPER, INITCAP, LENGTH, LTRIM, RTRIM, SUBSTRING, LPAD, RPAD.

5: T-SQL: Transact Structured Query Language

5.1: Implement GRANT and REVOKE commands, COMMIT and ROLLBACK commands.

6: Joins And Views

6.1: Program to illustrate use of JOIN.

6.2: Create a VIEW.

7: Introduction To PL/SQL

7.1: Introduction to PL/SQL, basic code structure, difference between SQL and PL/SQL.

7.2: Study PL/SQL control structures.

7.2.1: Conditional control – IF and CASE statements.

7.2.2: Iterative control – LOOP and EXIT statements.

7.2.3: Sequential control – GOTO and NULL statements.

7.3: Program to find greatest of two numbers.

7.4: Program to find greatest of three numbers.

7.5: Program to perform addition, subtraction, multiplication, division according to user's choice.

7.6: Program to print first n natural numbers.

| Course Code | CSE264 |
| Course Title | Object Oriented Programming using C++ Laboratory |
| Type of Course | PC |
| LTP | 002 |
| Credits | 1 |
| Course Prerequisites | Knowledge of C++ Programming Language Concepts |
| Course Objectives | This course is to help the students to give the practical implementation of the C++ programs |
| Course outcome | The learner will be able to – <ol style="list-style-type: none">1. Design a program using member functions in and out of the class.2. Write a program to demonstrate use of Constructors and Destructors.3. Implement operator overloading through C++ programming.4. Demonstrate Inheritance and polymorphism in real-world problems using C++. |

List of Practicals

1: Classes and Objects

- 1.1: Write a program that uses a class where the member functions are defined inside a class.
- 1.2: Write a program that uses a class where the member functions are defined outside a class.
- 1.3: Write a program to demonstrate the use of static data members.
- 1.4: Write a program to demonstrate the use of const data members.

2: Constructors and Destructors

- 2.1: Write a program to demonstrate the use of zero-argument and parameterized constructors.
- 2.2: Write a program to demonstrate the use of dynamic constructor.
- 2.3: Write a program to demonstrate the use of explicit constructor.

3: Operator Overloading

- 3.1: Write a program to demonstrate the overloading of increment and decrement operators.
- 3.2: Write a program to demonstrate the overloading of binary arithmetic operators.
- 3.3: Write a program to demonstrate the overloading of memory management operators.

4: Typecasting

- 4.1: Write a program to demonstrate the typecasting of basic type to class type.
- 4.2: Write a program to demonstrate the typecasting of class type to basic type.
- 4.3: Write a program to demonstrate the typecasting of class type to class type.

5: Inheritance

5.1: Write a program to demonstrate multilevel inheritance.

5.2: Write a program to demonstrate multiple inheritances.

5.3: Write a program to demonstrate the virtual derivation of a class.

6: Polymorphism

6.1: Write a program to demonstrate the runtime polymorphism.

7: Exception Handling

7.1: Write a program to demonstrate exception handling.

8: File Handling

8.1 : Write a program to demonstrate the reading and writing of mixed type of data.

8.2: Write a program to demonstrate the reading and writing of objects.

| Course Code | CSE266 |
| Course Title | Computer Networks Laboratory |
| Type of Course | PC |
| L T P | 200 |
| Credits | 1 |
| Course Prerequisites | Basic knowledge of Computer, Digital Circuits and Network Arrangement. |
| Course Objectives (CO) | <ol style="list-style-type: none"> 1. To develop an understanding of modern network architectures from a design and performance perspective. 2. To introduce the student to the major concepts involved in wide-area networks (WANs), local area networks (LANs) and Wireless LANs (WLANs). 3. To provide an opportunity to do network programming 4. To provide a WLAN measurement idea. |
| Course outcome | <p>The learner will be able to –</p> <ol style="list-style-type: none"> 1. Understand functionality of various network components. 2. Prepare straight cable and cross cable. 3. Configure TCP/IP protocol in Windows & LINUX. 4. Implement file and printer sharing. 5. Design Class A, B, and C network. |

SYLLABUS

List of Practicals

1: Specification, Familiarization of Networking Components & Devices

- 1.1: Specification of laptop & computers.
- 1.2: Familiarization of Networking Components & devices: LAN adapter, Hub, Switches, Routers.

2: Familiarization with Transmission Media & Tools, Preparing Cables

- 2.1: Coaxial cable, UTP Cable.
- 2.2: Preparing straight cable & cross cable.

3: Study of Topology, Study of TCP/IP Protocol

- 3.1: Study of LAN topology & their creation using N/W devices, cables & computers.
- 3.2: Configuration of TCP/IP protocol in Windows & LINUX.

4: Addressing, File & Printer Sharing

4.1: Implementation of file & printer sharing.

4.2: Designing & implementing Class A, B, C network.

5: Subnet Planning, FTP Server, TCP/UDP

5.1: Subnet planning & implementation.

5.2: Installation of FTP server & client.

5.3: Study of TCP/UDP performance.

|------------------------------|---|
| Course Code | CSE 353 |
| Course Title | Design and Analysis of Algorithms |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Data Structures,C,C++Programming language |
| Course Objectives(CO) | <ol style="list-style-type: none"> 1. Analyze the asymptotic performance of algorithms. 2. Write rigorous correctness proofs for algorithms. 3. Demonstrate a familiarity with major algorithms and data structures. 4. Apply important algorithmic design paradigms and methods of analysis. 5. Synthesize efficient algorithms in common engineering design situations. |
| Course Outcome(CO) | <p>The learner will be able to –</p> <ol style="list-style-type: none"> 1. For a given algorithm, analyze worst-case running times of algorithms based on asymptotic analysis and justify the correctness of algorithms. 2. Describe the greedy paradigm and explain when an algorithmic design situation calls for it. For a given problem, develop the greedy algorithms. 3. Describe the divide-and-conquer paradigm and explain when an algorithmic design situation calls for it. Synthesize divide-and-conquer algorithms. Derive and solve recurrence relations. 4. Describe the dynamic-programming paradigm and explain when an algorithmic design situation calls for it. For a given problem of dynamic programming, develop the dynamic programming algorithms and analyze it to determine its computational complexity. |

SYLLABUS

UNIT-I

Introduction: Characteristics of algorithm. Analysis of algorithm: Asymptotic analysis of complexity bounds – best, average, and worst-case behavior; Performance measurements of algorithm, Time and space trade-offs. Analysis of recursive algorithms through recurrence relations: Substitution method, Recursion tree method, and Master’s theorem.

UNIT-II

Fundamental Algorithmic Strategies: Brute-Force, Greedy, Dynamic Programming, Branch-and-Bound,

and Backtracking methodologies for the design of algorithms; Illustrations of these techniques for Problem-Solving, Bin Packing, Knap Sack, TSP. Heuristics – characteristics and their application domains.

UNIT-III

Graph and Tree Algorithms: Traversal algorithms: Depth First Search (DFS) and Breadth First Search (BFS); Shortest path algorithms, Transitive closure, Minimum Spanning Tree, Topological sorting, Network Flow Algorithm.

UNIT-IV

Tractable and Intractable Problems: Computability of Algorithms, Computability classes – P, NP, NP-complete, and NP-hard. Cook's theorem, Standard NP-complete problems, and Reduction techniques.

Advanced Topics: Approximation algorithms, Randomized algorithms, Class of problems beyond NP – PSPACE.

| RECOMMENDED BOOKS | | | |
|-------------------|---|---|-----------------------|
| Sr.no. | Name | Author(S) | Publisher |
| 1 | Introduction to Algorithms | 4 TH Edition, Thomas H Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein | MIT Press/McGraw-Hill |
| 2 | Fundamentals of Algorithms | E. Horowitz et al. | Pearson Education |
| 3 | Algorithm Design, 1 ST Edition | Jon Kleinberg and Éva Tardos | Pearson |

ProgrammeCode: UG018

| | |
|-----------------------------|--|
| Course Code | CSE 355 |
| Course Title | Computer Graphics |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Computer graphics (basics), linear algebra, programming |
| Course Objectives | The main objective of this course is to give the student a comprehensive understanding of computer graphics and visualization and their applications. In particular participants will have the ability to understand the process of generating virtual images from virtual scenes, typically identified as a pipeline of generate, and computer and store/display. |
| Course Outcome (CO) | The learner will be able to- <ol style="list-style-type: none"> 1. Understand the fundamental graphical operations and the implementation on computer. 2. Get a glimpse of recent advances in computer graphics. 3. Describe user interface issues that make the computer easy for the novice to use. 4. Discuss interface issues that make the computer easy for the novice to use. |

SYLLABUS

UNIT-I

Introduction - History of computer graphics, applications, graphics pipeline, physical and synthetic images, synthetic camera, modeling, animation, rendering, relation to computer vision and image processing, review of basic mathematical objects (points, vectors, matrix methods)

Introduction to OpenGL - OpenGL architecture, primitives and attributes, simple modeling and rendering of two- and three-dimensional geometric objects, indexed and RGB color models, framebuffer, double buffering, GLUT, interaction, and callbacks, picking.

UNIT-II

Geometric transformations - Homogeneous coordinates, affine transformations (translation, rotation, scaling, and shear), concatenation, matrix stacks and use of model view matrix in OpenGL for these operations.

Viewing - Classical three-dimensional viewing, computer viewing, specifying views, parallel and perspective projective transformations; Visibility- Z-buffer, BSP trees, Open-GL culling, hidden-surface algorithms.

UNIT-III

Shading - Light sources, illumination model, Gouraud and Phong shading for polygons. Rasterization - Line segment and polygon clipping, 3D clipping, scan conversion, polygonal fill, Bresenham's algorithm.

UNIT-IV

Discrete Techniques – Texture mapping, compositing, textures in OpenGL, Ray Tracing – Recursive ray tracer, ray–sphere intersection.

Representation and Visualization – Bezier curves and surfaces, B-splines, visualization, interpolation, marching squares algorithm.

RECOMMENDED BOOKS

| Sr.no. | Name | Author(s) | Publisher |
|--------|---|-----------------------------------|-------------------|
| 1 | Interactive Computer Graphics. A Top-Down Approach Using OpenGL | Edward Angel | Pearson Education |
| 2 | Computer Graphics with OpenGL | Donald Hearn and Pauline Baker | Prentice Hall |
| 3 | Computer Graphics using OpenGL | F.S. Hill Jr. and S.M. Kelley | Prentice Hall |
| 4 | Computer Graphics (first edition) | Peter Shirley and Steve Marschner | A.K. Peters |

| | |
|-----------------------------|---|
| Course Code | CSE351 |
| Course Title | Advanced Computer Networks |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Basic knowledge of computers and their components. |
| Course Objectives | This subject dives into next-generation networking concepts, focusing on architecture, protocols, and technologies like SDN and NFV. It builds on Foundational networking knowledge and prepares students for cutting-edge developments in the field. |
| Course Outcome (CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Understand functionality of various network components, its architecture and services. 2. Implement Congestion and Wireless Networks. 3. Compare Software Defined Networks and traditional networks. 4. Discuss Network Function Virtualization, its architectures, applications and use cases. |

SYLLABUS

Unit I: Network Architecture & Services

- Overview of data communication models, Internet multicasting, NAT (Network Address Translation), VPN (Virtual Private Network)
- Routing algorithms: BGP, RIP, OSPF
- Differentiated and Integrated Services, SONET, ATM, MPLS, Next-generation Internet architectures
- Green communication networks and data center networking

Unit II: Congestion & Wireless Networks

- Network congestion mechanisms
- ARQ protocols & TCP/IP variants
- Multimedia networking
- Sliding window protocol implementation
- Cellular & ad hoc wireless networks
- Medium access schemes, routing, transport layer protocols

- Security & energy management in wireless networks

Unit III: Software Defined Networking (SDN)

- SDN vs traditional networks
- SDN controller & switch design
- OpenFlow protocol
- Control overhead & handoff algorithms

Unit IV: Network Function Virtualization (NFV)

- NFV architecture & use cases
- NFV orchestration
- NFV applications in 5G network

|-------------------------------|--|
| Course Code | LAW005 |
| Course Title | Constitution of India |
| Type of Course | MC |
| L T P | 3 0 0 |
| Credits | NC |
| Course Prerequisites | Nil |
| Course Objectives (CO) | <ol style="list-style-type: none"> 1. To enable the student to study and understand the basics of Indian Constitutions 2. To aware the learners about the duties of Citizens. 3. To acquaint the learners with political vocabulary. 4. To aware they about roots of Indian constitution and its relevance in present scenario. 5. To acquaint the learners with various posts and procedures for election. |

SYLLABUS

UNIT-I

Constitution of India: - Basic features of the Indian Constitution: Sovereign, Socialist, Secular and Democratic Republic, Preamble of the Constitution of India: Text and features of Indian Federation and its importance, Nature of Indian Federalism and Centre-State Relations

UNIT-II

Fundamental Duties: Fundamental Duties included in the Constitution, Importance of Fundamental Duties, Directive Principles of the State Policy: Nature and Classification of Directive Principles, Criticism & Importance of Directive Principles, Parliament: Characteristics, Powers & Actual role of Parliament, Decline in the position of Parliament.

UNIT-III

President: Method & Stages of President Election, Powers and Position of the President, Prime Minister: Appointment of the Prime Minister, Powers, Changing role of Prime Minister, Supreme Court: Its Composition, Powers and Functions of Supreme Court, Position and Independence of judiciary.

UNIT-IV

Governor: Appointment, Powers and position of the Governor, Chief Minister: Powers and Position of the State Council Minister & Chief Minister, High Court: Its Composition, Powers and Functions of Supreme Court

| Course Prerequisites | Knowledge of Program Development Constructs |
| Course Objective(s) | This practical course work allows the students to efficiently design a working software model. |
| Course Outcome(CO) | The learner will be able to- 1. Implement algorithms for drawing 2D primitives 2. Implement transformations and clippings 3. Implement 3D projections |

SYLLABUS

1. Implementation of Algorithms for drawing 2D Primitives – Line (DDA, Bresenham) – all slopes Circle (Midpoint)
2. 2D Geometric transformations –
 - Translation
 - Rotation Scaling
 - Reflection Shear
 - Window-Viewport
3. Composite 2D Transformations
4. Line Clipping
5. 3D Transformations – Translation, Rotation, Scaling.
6. 3D Projections – Parallel, Perspective.
7. Creating 3D Scenes.
8. Image Editing and Manipulation – Basic Operations on image using any image editing software, Creating gif animated images, Image optimization.
9. 2D Animation – To create Interactive animation using any authoring tool.

RECOMMENDED BOOKS

| Course Prerequisites | Basic knowledge of Computer, Digital Circuits and Network Arrangement. |
| Course Objective(s) | <ol style="list-style-type: none"> 1. Gain hands-on experience with advanced networking protocols and configurations. 2. Understand the implementation and debugging of routing, DNS, FTP, and mail services. Use open-source tools for diagnostics and performance analysis. |
| Course Outcome(CO) | The learner will be able to- <ol style="list-style-type: none"> 1. Understand and configure networking protocols. 2. Implement and debug routing, DNS, FTP and mail services 3. Configure and use open source tools for diagnostics and performance analysis. |

SYLLABUS

List of Experiments

1. Basic router configuration and user interface setup
2. IP addressing for various topologies
3. DHCP server integration with BOOTP daemon
4. Debugging ARP/RARP protocols using open-source tools
5. Implementation of RIP, BGP, OSPF routing protocols
6. Static route configuration and verification using netstat
7. DNS setup: caching client, proxy, reverse and forward DNS
8. FTP server configuration and performance analysis
9. TFTP client setup and comparison with FTP
10. Mail server setup for IMAP/POP and SMTP client development
11. SNMPD with OpenNMS for device status monitoring
12. NAS setup using NIS/NFS and SMB for Windows clients

| Course Objectives | Makes the students proficient in implementing algorithms using the algorithm design techniques. |
| Course out come | <p>The learner will be able to –</p> <ol style="list-style-type: none"> 1. Analyze the complexities of various problems in different domains. 2. Understand methods for analyzing the efficiency and correctness of algorithms (such as exchange arguments, recurrence, induction, and average case analysis). 3. Compare, contrast, and choose appropriate algorithmic design techniques to present an algorithm that solves a given problem. 4. Develop efficient algorithms for the new problem with suitable designing techniques. |

1. Array

1.1: WAP to code and analyze to compute greatest common divisor of two numbers.

1.2: WAP to code and analyze to find the mid element in an array.

1.3: WAP to code and analyze to find maximum and minimum element (without MAXMIN algorithm) in an array.

1.4: WAP to code and analyze to find the largest element in an array.

1.5: WAP to code and analyze to enter elements in an array.

2. Searching

2.1: WAP to find maximum and minimum element choosing MAXMIN algorithm.

2.2: WAP to code and analyze to find an element using binary search and find its time complexity.

3. Sorting

3.1: WAP to code and analyze to sort an array of integers using Heap Sort.

3.2: WAP to code and analyze to sort an array of integers using Merge Sort.

4. Pattern Matching

4.1: WAP to code and analyze to find all occurrences of a pattern in each string.

5. Shortest Path Algorithm

5.1: WAP to code and analyze to find minimum path using Kruskal's Algorithm.

6. Dynamic Programming

6.1: WAP to code and analyze to find the distance between two character strings using Dynamic Programming.

7. Divide and Conquer

7.1: WAP to code and analyze to find an element using linear search by applying divide and conquer technique and find its time complexity.

| | |
|------------------------------|--|
| Course Code | CSE367 |
| Course Title | Four Weeks Industrial Training Evaluation (Undertaken after 4th semester) |
| Type of Course | SEC |
| L T P | - |
| Credits | 3 |
| Course Prerequisites | Basics of programming and software development |
| Course Objectives | To enhance programming skills of a learner, so that the learner finds Solutions to problems. He also gets industrial experience of software development |
| Course Outcomes- (CO) | The learner will be able to- <ol style="list-style-type: none"> 1. implement software using proper software life cycle models 2. works with the latest IT tools 3. Develop team leadership |

The four weeks industrial training will give exposure to the practical aspects of the discipline, in the real-time working scenario. In addition, the student may also work on a specified task or project which may be assigned to him/her, by the industry person. The student will maintain the daily diary which will have the signature of an industry expert, assigned to him/ her. This daily diary will be produced by the student during practical examinations, as and when scheduled by the institute. The department will evaluate student performance based on his/her project report, running software code, CD containing code and daily diary.

| CourseCode | CSE369 |
| CourseTitle | Mobile Application Development |
| TypeofCourse | PE |
| L T P | 3 0 0 |
| Credits | 3 |
| CoursePrerequisites | Students are expected to have basic knowledge of JAVA, HTML, JavaScript, and CSS. |
| CourseObjectives | Students will learn the basics of the programming language, designing mobile interfaces, using libraries to build applications, user input, and other aspects. |
| Course Outcome(CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Define multimedia to potential clients. 2. Identify and describe the function of the general skill sets in the multimedia industry. 3. Identify the basic components of a multimedia project. 4. Identify the basic hardware and software requirements for multimedia development and playback. |

SYLLABUS

UNIT-I

Introduction To Mobile Devices

Mobile devices vs. desktop devices, ARM and Intel architectures, Power Management, Screen resolution, Touch interfaces, Application deployment, App Store, Google Play, Windows Store, Development environments, Xcode, Eclipse, VS2012, PhoneGap, Native vs. web applications

Mobile Applications

Introduction to mobile computing, mobile applications, Embedded systems, Market and business drivers for mobile applications, Publishing and delivery of mobile applications, Requirements gathering and validation for mobile applications

UNIT-II

Mobile OS Architectures

Comparing and Contrasting architectures of all three – Android, iOS and Windows, Underlying OS (Darwin vs. Linux vs. Win 8), Kernel structure and native level programming, Runtime (Objective-C vs. Dalvik vs. WinRT), Approaches to power management, Security

Basic Design

Introduction, Basics of embedded systems design, Embedded OS Design constraints for mobile applications, both hardware and software related, Architecting mobile applications, User interfaces for mobile applications, Touch events and gestures, Achieving quality constraints, performance, usability, security, availability and modifiability

UNIT-III

Advanced Design

Designing applications with multimedia and web access capabilities, Integration with GPS and social media

networking applications, Accessing applications hosted in a cloud computing environment, Design patterns for mobile applications

Technology I – Android

Introduction, Establishing the development environment, Android architecture, Activities and views, Interacting with UI, Persisting data using SQLite, Packaging and deployment, Interaction with server-side applications, Using Google Maps, GPS and Wi-Fi, Integration with social media applications

UNIT-IV

Technology II – iOS

Introduction to Objective-C, iOS features, UI implementation, Touch frameworks, Data persistence using Core Data and SQLite, Location aware applications using Core Location and Map Kit, Integrating calendar and address book with social media application, Using Wi-Fi, iPhone marketplace

Mobile Device Security

Mobile malware, Device protections, iOS “Jailbreaking”, android “rooting” and Windows “defenestration”

| Type of Course | PE |
| L T P | 3 0 0 |
| Credits | 3 |
| Course Prerequisites | NIL |
| Course Objectives | The Internet is evolving to connect people to physical things and physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables students to understand the basics of Internet and protocols. It introduces some of the application areas where Internet of Things can be applied. |
| Course Outcome(CO) | At the end of the course the learner will be able to- <ol style="list-style-type: none"> 1. Understand and describe Functional blocks of IOT 2. Explain MAC protocol and various routing protocols 3. Describe data aggregation and data dissemination 4. Evaluate and explain challenges in IoT design 5. Demonstrate the ability to develop applications through IoT tools |

UNIT-I

Introduction to IoT Defining IoT, Characteristics of IoT, Physical design of IoT, Logical design of IoT, Functional blocks of IoT, Communication models and APIs

UNIT-II

IoT & M2M Machine to Machine, Difference between IoT and M2M, Software define Network, Network and Communication aspects Wireless medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment and Node discovery, Data aggregation and dissemination

UNIT-III

Challenges in IoT Design challenges, Development challenges, Security challenges, other challenges Domain specific applications of IoT Home automation, Industry applications, Surveillance applications, Other IoT applications

UNIT-IV

Developing IoTs Introduction to Python, Introduction to different IoT tools, developing applications through IoT tools, developing sensor-based application through embedded system platform, Implementing IoT concepts with python

| Course Code | CSE373 |
| Course Title | Cloud Computing |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| CoursePrerequisites | Distributed System, Operating Systems and Networking |
| Course Objectives(CO) | This Course work provides the complete understanding of Cloud system, its implementation techniques and its various applications in the field of computer Science. |
| Course Outcome | The learner will be able to- <ol style="list-style-type: none"> 1. Understand characteristics and types of cloud computing 2. Describe architecture of cloud computing 3. Explain applications of cloud 4. Demonstrate their knowledge of cloud computing to real world examples |

SYLLABUS

UNIT-I

Cloud Computing Basics, History of Cloud Computing, Importance, Characteristics of Cloud Computing, Benefits and Challenges to Cloud architecture.

UNIT-II

Types of Cloud: Public Cloud, Private Cloud, Hybrid and Community Cloud. Differences between public and private cloud, Status of Cloud Computing in India, Cloud Service Models, Role of virtualization in enabling the cloud; Differences between Grid computing and Cloud computing, Differences between grid computing and utility computing, Cloud Computing security concerns and proposed security model for future cloud computing.

UNIT-III

Cloud Computing – Logical architecture, developing holistic Cloud Computing Reference Models – Seven step model of migrating to cloud. Virtualization types, Virtual Machine Life Cycle, Virtualization applications, Pitfalls of Virtualization, CPU Virtualization.

UNIT-IV

Case Study of Cloud Computing, Cloud Computing Risks. CloudTools, CloudApplications, FutureTrends, Mobile cloud, Jungle Computing, BigData–Features and applications

| RECOMMENDED BOOKS | | | |
|--------------------------|--|--|--------------------|
| Sr. no. | Name | Author(s) | Publisher |
| 1 | Cloud Computing – A Practical Approach | Anthony T. Velte, Toby J. Velte and Robert E | TMH |
| 2 | Cloud Computing–Web based Applications | Michael Miller | Pearson Publishing |

| | |
|-------------------------------|---|
| Course Code | CSE375 |
| Course Title | Neural Network and Deep Learning |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Overview of Structure and Software Analysis and Design |
| Course Objectives(C O) | <ol style="list-style-type: none"> 1. Make students familiar with basic concepts and tool used in neural networks 2. Teach students structure of a neuron including biological and artificial 3. Teach learning in network (Supervised and Unsupervised) 4. Teach concepts of learning rules. |
| Course Outcomes | <p>The learner will be able to</p> <ol style="list-style-type: none"> 1. Design single and multi-layer feed-forward neural networks 2. Understand supervised and unsupervised learning concepts & understand unsupervised learning using Kohonen networks 3. Understand training of recurrent Hopfield networks and associative memory concepts. |

SYLLABUS

Unit I: Introduction

Structure of biological neurons relevant to ANNs; models of artificial neural networks (ANNs); feedforward and feedback networks; learning rules: Hebbian learning rule, perceptron learning rule, delta learning rule, Widrow-Hoff learning rule, correction learning rule, winner-take-all learning rule, etc.

Unit II: Single layer Perception Classifier and Multi-layer Feed forward Networks

Classification model, features, and decision regions; training and classification using the discrete perceptron algorithm; single-layer continuous perceptron networks for linearly separable classifications; linearly non-separable pattern classification; Delta learning rule for multi-perceptron layers; generalized delta learning rule; error backpropagation training; learning factors; and examples.

Unit III: Single layer feedback Networks

Basic Concepts, Hopfield networks, Training & Examples. Associative memories: Linear Association, Basic Concepts of Recurrent.

Unit IV: Auto associative memory

Retrieval algorithm, storage algorithm; By directional associative memory, Architecture, Association encoding & decoding, Stability.

RECOMMENDED BOOKS

| Sr.no. | Name | Author(s) | Publisher |
|--------|---|---------------------------|------------------|
| 1 | Introduction to Artificial Neural systems | Jacek M. Zurada, 1994 | Jaico Publ. ouse |
| 2 | Neural Network Fundamentals | N.K. Bose, P. Liang, 2002 | M.H |

| | |
|-----------------------------|--|
| Course Code | CSE352 |
| Course Title | Internet Web Programming |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Basic knowledge of Program Development and Programming Language Constructs |
| Course Objectives | This course introduces advanced programming skills for website design. Dynamic content development will be explored through state-of-the-art programming languages for the creation of interactive websites. Students will create web pages that utilize the most current advances in web development. |
| Course Outcomes (CO) | The students will be able to: CO1: Understand concepts of Internet, WWW, Email, and HTML. CO2: Perform programs related to forms, table, and CSS using HTML tags. CO3: Implement the concepts of JavaScript, and DOM. CO4: Implement PHP programs, and MySQL commands using PHPMyAdmin. |

SYLLABUS

UNIT-I

Internet and WWW: Introduction to internet and its applications, Email, Telnet, FTP, e-commerce, video conferencing, e-business. Internet service providers, domain name server, Internet address.

World Wide Web (WWW): World Wide Web and its evolution, Uniform Resource Locator (URL), browsers – Internet Explorer, Netscape Navigator, Opera, Firefox, Chrome, Mozilla. Search engine, web server – Apache, IIS, proxy server, HTTP protocol.

HTML and Graphics: HTML Tag Reference, Global Attributes, Event Handlers, Document Structure Tags, Formatting Tags, Text Level Formatting, Block Level Formatting, List Tags, Hyperlink Tags, Image and Image Maps, Table Tags, Form Tags, Frame Tags, Executable Content Tags.

Image Maps: Client-side Image maps, Server-side Image maps, Using Server-side and Client-side Image maps together, Alternative text for Image maps.

Tables: Introduction to HTML tables and their structure, Table tags, Alignment – Aligning Entire Table, Alignment within a row, Alignment within a cell, Attributes, Content Summary, Background Colour, Adding a Caption, Setting the width, Adding a border, Spacing within a cell, Spacing between the cells, Spanning multiple rows or columns, Elements that can be placed in a table, Table Sections and column properties, Tables as a design tool.

UNIT-II

Frames: Introduction to Frames, Applications, Frames document, The <FRAMESET> tag, Nesting <FRAMESET> tag, Placing content in frames with the <FRAME> tag, Targeting named frames, Creating floating frames, Using Hidden frames.

Forms: Creating Forms, The <FORM> tag, Named Input fields, The <INPUT> tag, Multiple lines text windows, Drop down and list boxes, Hidden, Text, Text Area, Password, File Upload, Button, Submit, Reset, Radio, Checkbox, Select, Option. Forms and Scripting, Action Buttons, Labelling input fields, Grouping related fields, Disabled and read-only fields, Form field event handlers, Passing form data.

Style Sheets: What are style sheets? Why are style sheets valuable? Different approaches to style sheets, using multiple approaches, Linking to style information in separate file, Setting up style information, Using the <LINK> tag, Embedded style information, Using <STYLE> tag, Inline style information.

UNIT-III

JavaScript: Introduction, Client-Side JavaScript, Server-Side JavaScript, JavaScript Objects, JavaScript Security.

Operators: Assignment Operators, Comparison Operators, Arithmetic Operators, % (Modulus), ++ (Increment), -- (Decrement), - (Unary Negation), Logical Operators, Short-Circuit Evaluation, String Operators, Special Operators (Conditional operator, Comma operator, delete, new, this, void).

Statements: Break, Comment, Continue, Delete, Do...while, Export, For, For...in, Function, If...else, Import, Labelled, Return, Switch, Var, While, With.

Core JavaScript (Properties and Methods of Each): Array, Boolean, Date, Function, Math, Number, Object, String, RegExp.

Document and its Associated Objects: document, Link, Area, Anchor, Image, Applet, Layer.

Events and Event Handlers: General information about Events, Defining Event Handlers, Event – onAbort, onBlur, onChange, onClick, onDoubleClick, onDragDrop, onError, onFocus, onKeyDown, onKeyPress, onKeyUp, onLoad, onMouseDown, onMouseMove, onMouseOut, onMouseOver, onMouseUp, onMove, onReset, onResize, onSelect, onSubmit, onUnload.

UNIT-IV

XML: Introduction to XML, Anatomy of an XML document, Creating XML Documents, Creating XML DTDs, XML Schemas, XSL.

PHP: Why PHP and MySQL? Server-side web scripting, Installing PHP, Adding PHP to HTML, Syntax and Variables, Passing information between pages, Strings, Arrays and Array Functions, Numbers, Basic PHP errors/problems.

Advanced PHP and MySQL: PHP/MySQL Functions, Displaying queries in tables, Building Forms from queries, String and Regular Expressions, Sessions, Cookies and HTTP, Type and Type Conversions, E-Mail.

| RECOMMENDED BOOKS | | | |
|--------------------------|---|-----------------------------------|---------------------|
| Sr. no. | Name | Author(s) | Publisher |
| 1 | HTML 5 in simple steps Kogent Learning | Dreamtech press Solutions Inc. | Dreamtech Press |
| 2 | HTML: Beginner's guide Wendy Willard Mc Graw Hill | Wendy Willard | Osborne/McGraw-Hill |
| 3 | Managing software process | Watts Humphrey | Pearson education |
| 4 | Software Engineering – An Engineering Approach | James F. Peters and WitoldPedrycz | Wiley |

| | |
|-----------------------------|--|
| Course Code | CSE354 |
| Course Title | Software Engineering |
| Type of Course | PC |
| L T P | 4 0 0 |
| Credits | 4 |
| Course Prerequisites | Overview of Structure and Software Analysis and Design |
| Course Objectives | This Course Work provides the thorough understanding of the software engineering concepts and it also gives the ideas of handling the projects in the organizations and in institutes |
| Course Outcome (CO) | The learner will be able to- 1. Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics 2. Communicate effectively with a range of audiences 3. Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors 4. Analyze, design, verify, validate, implement, apply, and maintain software systems |

SYLLABUS

UNIT-I

Introduction: Software Engineering definition, history, evolution of software, software components, applications, software myths, software crisis.

Software Development Lifecycle: Requirements analysis, software design, coding, testing, maintenance

Software Process Models: Waterfall model, prototyping, interactive enhancement, spiral model. Role of Management in software development. Role of metrics and measurement.

UNIT-II

Software Requirement Specification: Problem analysis, requirement specification, validation, metrics, monitoring and control, SRS

UNIT-III

Coding: Top-down and bottom-up, structured programming, information hiding, programming style, and internal documentation. Verification, Metrics, monitoring and control.

Testing: Levels of testing functional testing, structural testing, test plan, test cases specification, and reliability assessment.

UNIT-IV

Software Project Management: Cost estimation, Project scheduling, Staffing, Software configuration management, Quality assurance, SIX SIGMA, Project Monitoring, Risk management, reverse engineering
CASE Tools

| RECOMMENDED BOOKS | | | |

| Sr. no. | Name | Author(s) | Publisher |
| 1 | Engineering: A Practitioners Approach | Roger Pressman | McGraw Hill |
| 2 | Software Engineering | Sommerville | Adison Wesley |
| 3 | Managing software process | Watts Humphrey | Pearson education |
| 4 | Software Engineering – An Engineering Approach | James F. Peters and WitoldPedrycz | Wiley |

| | |
|------------------------------|--|
| Course Code | CSE356 |
| Course Title | Programming in Java |
| Type of Course | PC |
| L T P | 4 0 0 |
| Credits | 4 |
| Course Prerequisites | Knowledge of OOPs |
| Course Objectives(CO) | <ol style="list-style-type: none"> 1. Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc. 2. Be aware of the important topics and principles of software development. 3. Be able to use the Java SDK environment to create, debug and run simple Java programs. 4. Understand the principles of inheritance, packages and interfaces |
| Course Outcome | <p>The learner will be able to –</p> <ul style="list-style-type: none"> · Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs. · Read and make elementary modifications to Java programs that solve real-world problems. · Validate input in a Java program. · Identify and fix defects and common security issues in code. |

SYLLABUS

UNIT-I

Object-oriented programming concepts: objects, classes, methods and messages, abstraction and encapsulation, inheritance, abstract classes, polymorphism.

Objects and classes in Java: defining classes, methods, access specifiers, static members, constructors, finalize method.

UNIT-II

Arrays, Strings, Packages, Java-Doc comments, Inheritance, Class hierarchy, Polymorphism, Dynamic binding, Final keyword, Abstract classes.

UNIT-III

The Object class, Reflection, Interfaces, Object cloning, Inner classes, Proxies, I/O Streams, Graphics programming, Frame, Components, Working with 2D shapes.

UNIT-IV

Basics of event handling, Event handlers, Adapter classes, Actions, Mouse events – AWT event hierarchy, Introduction to Swing, Model-View-Controller design pattern – Buttons, Layout management, Swing Components, Exception handling, Exception hierarchy, Throwing and catching exceptions.

| Course Code | MDC018 |
| Course Title | Gender ,Culture and Development |
| Type of Course | MDC/HS |
| LTP | 300 |
| Credits | 3 |
| Course Prerequisite | None |
| Course Objectives(CO) | The objective of this course is to build an understanding and initiate and strengthen programs combating gender-based violence and discrimination |
| Course Outcomes | Upon completion of this course, students will be able to – <ol style="list-style-type: none"> 1. Understand basic gender concepts. 2. Explain gender roles and relationship matrix. 3. Identify gender-based violence from a human rights perspective. 4. Develop relationship between gender, development, and violence. |

SYLLABUS

UNIT-I

IntroductiontoGender

1. DefinitionofGender
2. BasicGenderConceptsandTerminology
3. ExploringAttitudestowardsGender
4. SocialConstructionof Gender

UNIT-II

GenderRoles andRelations

1. TypesofGender Roles
2. GenderRolesandRelationshipsMatrix
3. Gender-basedDivisionandValuationofLabour

UNIT-III

GenderDevelopmentIssues

1. IdentifyingGender Issues
2. GenderSensitiveLanguage
3. Gender,GovernanceandSustainableDevelopment
4. GenderandHumanRights

Gender-basedViolence

1. Theconceptofviolence
2. TypesofGender-basedviolence
3. Therelationshipbetweengender,developmentandviolence
4. Gender-basedviolencefromahumanrights perspective

UNIT-IV

GenderandCulture

1. GenderandFilm
2. GenderandElectronicMedia
3. GenderandAdvertisement
4. GenderandPopularLiterature

| | |
|-----------------------------|---|
| Course Code | CSE380 |
| Course Title | Software Engineering Laboratory |
| Type of Course | PC |
| L T P | 0 0 2 |
| Credits | 1 |
| Course Prerequisites | Knowledge of Program Development Constructs |
| Course Objectives | This practical coursework allows the students to efficiently Design a working software model. |
| Course Outcome (CO) | The students will be able to: CO1: Understand real time business requirements and design SRS documents and Use Case model CO2: Understand notations used in UML diagrams and design UML Class Diagram, Interaction diagrams |

SYLLABUS

Use Case Models

1.1: To develop a problem statement.

1.2: Develop an IEEE standard SRS document. Also develop risk management and project plan (Gantt chart).

1.3: Identify Use Cases and develop the Use Case model.

UML Diagrams

2.1: Identify the conceptual classes and develop a domain model with UML Class diagram.

2.2: Using the identified scenarios, find the interaction between objects and represent them using Object diagrams.

2.3: Draw UML Interaction diagrams: Collaboration and Sequence diagrams.

2.4: Draw the State Chart diagram.

2.5: Identify the business activities and develop a UML Activity diagram.

Implementations of Layers

3.1: Draw Component diagrams.

3.2: Draw Deployment diagrams.

| RECOMMENDED BOOKS | | | |

| 3 | Object-Oriented Software Engineering: Practical Software Development Using UML and Java | Lethbridge | Tata McGraw-Hill Education |

| | |
|-----------------------------|---|
| Subject Code | CSE382 |
| Course Title | Internet Web Programming-Laboratory |
| Type of Course | PC |
| LTP | 0 0 2 |
| Credits | 1 |
| Course Prerequisite | Basic knowledge of Program Development and Programming Language Constructs |
| Course Objectives | This course introduces advanced programming skills for website design. Dynamic content development will be explored through state-of-the-art programming languages for the creation of interactive web sites. Students will create web pages that utilize the most current advances in web development. |
| Course Outcomes (CO) | The learner will be able to- 1. Implement interactive web page(s) using HTML, CSS and JavaScript. 2. Design a responsive web site using HTML5 and CSS3. 3. Describe and differentiate different Web Extensions and Web Services. 4. Build Dynamic web site using server-side PHP Programming and Database connectivity. |

SYLLABUS

List of Practicals

1. Configuration and administration of Apache Web Server.
2. Develop an HTML page to demonstrate the use of basic HTML tags.
3. Develop an HTML page to demonstrate linking to different HTML pages and links within a page, including insertion of images.
4. Implement HTML List tags.
5. Implement HTML Table tags.
6. Develop a registration form using various form elements like input box, text area, radio buttons, check boxes, etc.
7. Develop an HTML webpage for implementation of Frames.
8. Design an HTML page using the concepts of internal, inline, and external style sheets.
9. Create an HTML file to implement styles related to text, fonts, and links using cascading style sheets.
10. Create an HTML file to implement the concept of Document Object Model (DOM) using JavaScript.
11. Create an HTML page including JavaScript that takes a given set of integer numbers and displays them sorted in descending order.
12. Create a PHP file to print any text using variables.
13. Demonstrate the use of loops and arrays in PHP.
14. Create a PHP file using GET and POST methods.
15. A simple calculator web application that takes two numbers and an operator (+, -, /, * or %) from an HTML page and returns a result page with the operation performed.
16. Demonstrate the use of website designing tools such as Joomla and WordPress.

ProgrammeCode:UG018

| | |
|----------------------------|---------------------------------------|
| Subject Code | CSE384 |
| Course Title | Programming in Java Laboratory |
| Type of Course | PC |
| LTP | 0 0 2 |
| Credits | 1 |
| Course Prerequisite | NA |

LIST OF PRACTICALS

1. Implement a Java program demonstrating the difference between procedure-oriented programming and object-oriented programming paradigms.
2. Create a Java class to demonstrate the concepts of classes, objects, and object references.
3. Develop a Java application showcasing abstraction and encapsulation principles.
4. Design a Java program illustrating inheritance, including different types like single, multilevel, hierarchical, and hybrid.
5. Write a Java application demonstrating method overriding and overloading for achieving polymorphism.
6. Develop a Java program to showcase the use of constructors, constructor overloading, and constructor overriding.
7. Implement a Java class demonstrating the usage of access modifiers (private, public, protected, default).
8. Create a Java program illustrating the use of this keyword for referring to the current object.
9. Develop a Java application showcasing the usage of the super keyword for invoking superclass constructors and methods.
10. Write a Java program to demonstrate exception handling using try, catch, finally, throw, and throw keywords.
11. Develop a Java application to showcase error and exception types, such as checked exceptions, unchecked exceptions, and errors.
12. Implement a Java program demonstrating runtime polymorphism through overriding methods.
13. Write a Java application illustrating compile-time polymorphism through method overloading.
14. Create a Java program demonstrating the implementation of multiple inheritance using interfaces.
15. Design a Java application showcasing the usage of abstract classes and interfaces, highlighting their differences and similarities.

| | |
|-----------------------------|--|
| Course Code | CSE366 |
| Course Title | Digital Image Processing |
| Type of Course | PE |
| L T P | 3 0 0 |
| Credits | 3 |
| Course Prerequisites | This course has no prerequisite other than knowledge of probability and statistics, and Computer graphics. |
| Course Objectives | The objective of this course is to teach students the architecture of image processing. By taking this course, the students are expected to understand the basic algorithms and be able to apply these techniques. |
| Course Outcome (CO) | The learner will be able to- 1. Understand digital image processing 2. Understand the image enhancement. |

SYLLABUS

Unit-I

Introduction to the DIP areas and applications; Components of Digital Image Processing; Elements of Visual Perception; Image Sensing and Acquisition; Image Sampling and Quantization; Relationships between pixels; color models.

Unit-II

Image Enhancement Spatial Domain: Gray level transformations; Histogram processing; Basics of Spatial Filtering; Smoothing and Sharpening Spatial Filtering Frequency Domain: Introduction to Fourier Transform; Smoothing and Sharpening frequency domain filters; Ideal, Butterworth and Gaussian filters

Unit-III

Image Restoration Course Code: Noise models; Mean Filters; Order Statistics; Adaptive filters; Band reject Filters; Band pass Filters; Notch Filters; Optimum Notch Filtering; Inverse Filtering; Wiener filtering

Unit-IV

Feature Extraction and Image Segmentation Feature Extraction: Contour and shape dependent feature extraction, Extraction of textural features

Segmentation: Detection of Discontinuities; Edge Linking and Boundary detection; Region based segmentation; Morphological processing- erosion and dilation.

Image Compression and Encoding Entropy-based schemes, Transform-based encoding, Predictive encoding and DPCM, Vector quantization, Huffman coding.

| | |
|------------------------------|---|
| Course Code | CSE314 |
| Course Title | Computer Vision |
| Type of Course | PE |
| LTP | 3 0 0 |
| Credits | 3 |
| Course Prerequisites | Computer Graphics |
| Course Objectives(CO) | To familiarize the student with specific, well-known computer vision methods, algorithms, and results. To understand the roles of image transformations and the inherent variances in pattern recognition and classification.. |
| Course Outcomes | The learner will be able to – <ol style="list-style-type: none"> 1. Identify basic concepts, terminology, theories, models, and methods in the field of computer vision. 2. Describe basic methods of computer vision related to multi-scale representation, edge detection, and detection of other primitives, stereo, motion, and object recognition. 3. Assess which methods to use for solving a given problem. 4. Analyze the accuracy of the methods. |

SYLLABUS

UNIT-I

Digital Image Formation and low-level processing: Overview and State-of-the-art, Fundamentals of Image Formation, Transformation: Orthogonal, Euclidean, Affine, Projective, etc.; Fourier Transform, Convolution and Filtering, Image Enhancement, Restoration, Histogram Processing.

Depth estimation and multi-camera views: Perspective, Binocular Stereopsis: Camera and Epipolar Geometry; Homography, Rectification, DLT, RANSAC, 3-D reconstruction framework; Auto-calibration.

UNIT-II

Feature Extraction: Edges - Canny, LOG, DOG; Line detectors (Hough Transform), Corners - Harris and Hessian Affine, Orientation Histogram, SIFT, SURF, HOG, GLOH, Scale-Space Analysis- Image Pyramids and Gaussian derivative filters, Gabor Filters and DWT.

Image Segmentation: Region Growing, Edge Based approaches to segmentation, Graph-Cut, Mean-Shift, MRFs, Texture Segmentation; Object detection.

Pattern Analysis: Clustering: K-Means, K-Medoids, Mixture of Gaussians, Classification: Discriminant Function, Supervised, Un-supervised, Semi-supervised; Classifiers: Bayes, KNN, ANN models; Dimensionality Reduction: PCA, LDA, ICA; Non-parametric methods.

UNIT-III

Motion Analysis: Background Subtraction and Modeling, Optical Flow, KLT, Spatio-Temporal Analysis, Dynamic Stereo; Motion parameter estimation.

Shape from X: Light at Surfaces; Phong Model; Reflectance Map; Albedo estimation; Photometric Stereo; Use of Surface Smoothness Constraint; Shape from Texture, Color, Motion, and Edges.

ProgrammeCode:UG018

Perceptual Organization and Cognition: Vision as model-building and graphics in the brain, learning to see. Lessons from neurological trauma and visual deficits, Visual agnosias and illusions, and what they may imply about how vision works.

NIT-IV

Model Estimation: Machine learning and statistical methods in vision. Machine learning applications in computer vision. Discriminative and generative methods. Content-based image retrieval.

Miscellaneous Applications: CBIR, CBVR, Activity Recognition, Computational Photography, Biometrics, Stitching and Document Processing. Modern trends – Super-resolution; GPU, Augmented Reality; Cognitive models, Fusion, and SR & CS.

| RECOMMENDED BOOKS | | | |
|-------------------|---|---------------------------|------------------|

| 1 | Computer Vision: Algorithms and Applications | Richard Szeliski | Springer |
| 2 | Computer Vision: A Modern Approach | D.A. Forsyth, J.P.once | Prentice Hall |
| 3 | Introductory Techniques for 3D Computer Vision | Trucco and Verri | Prentice Hall |
| 4 | Computer vision | Shapiro, L. & Stockman, G | Prentice Hall |
| 5 | Three-dimensional Computer Vision: A geometric approach | Olivier Faugeras | Olivier Faugeras |

| | |
|-------------------------------|---|
| Course Code | CSE362 |
| Course Title | Compiler Construction |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Basic understanding of Programming Languages, Data Structures, and Machine Architecture |
| Course Objectives (CO) | <p><input type="checkbox"/> To understand and list the different stages in the process of compilation.</p> <ol style="list-style-type: none"> 1. Identify different methods of lexical analysis. 2. Design top-down and bottom-up parsers. 3. Identify synthesized and inherited attributes. 4. Develop syntax-directed translation schemes. 5. <input type="checkbox"/> Develop algorithms to generate code for a target machine. |
| Course Outcome(CO) | <ol style="list-style-type: none"> 1. For a given grammar specification, develop the lexical analyzer. 2. For a given parser specification, design top-down and bottom-up parsers. 3. Develop syntax-directed translation schemes. 4. <input type="checkbox"/> Develop algorithms to generate code for a target machine. |

SYLLABUS

UNIT-I

Introduction: Phases of compilation and overview.

Lexical Analysis (Scanner): Regular languages, finite automata, regular expressions, from regular expressions to finite automata, scanner generator (lex, flex).

Syntax Analysis (Parser): Context-free languages and grammars, push-down automata, LL(1) grammars and top-down parsing, operator grammars, LR(0), SLR(1), LR(1), LALR(1) grammars and bottom-up parsing, ambiguity and LR parsing, LALR(1) parser generator (yacc, bison).

UNIT-II

Semantic Analysis: Attribute grammar, syntax-directed definition, evaluation and flow of attributes in a syntax tree.

Symbol Table: Its structure, symbol attributes and management.

Run-time Environment: Procedure activation, parameter passing, value return, memory allocation, and scope.

UNIT-III

Intermediate Code Generation: Translation of different language features, different types of intermediate forms.

Code Improvement (Optimization): Analysis – control-flow, data-flow dependence, etc.; Code improvement – local optimization, global optimization, loop optimization, peep-hole optimization, etc.

UNIT-IV

Architecture Dependent Code Improvement: Instruction scheduling (for pipeline), loop optimization (for cache memory), etc. Register allocation and target code generation.

Advanced Topics: Type systems, data abstraction, compilation of Object-Oriented features, and non-imperative programming languages.

| RECOMMENDEDBOOKS | | | |
|-------------------------|---|-------------------------------------|------------------------------|
| Sr.no. | Name | Author(s) | Publisher |
| 1 | Compilers Principles, Techniques, & Tools | A.V. Aho, R. Sethi & J.D. Ullman | Pearson Education |
| 2 | Engineering a Compiler | Keith Cooper and Linda Torczon, | Morgan-Kaufman Publishers |
| 3 | Crafting a compiler | C. Fischer and R. LeBlanc | Benjamin Cummings |

| | |
|-----------------------------|---|
| Course Code | CSE 348 |
| Course Title | Digital Marketing |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Nil |
| Course Objective | The main objective of this course is to provide learners with the knowledge of business advantages of digital marketing and its importance for marketing success; to develop a digital marketing plan; to make a SWOT analysis to define a target group; and to get introduced to various digital channels, their advantages, and ways of integration. |
| Course Outcomes | The learner will be able to – <ol style="list-style-type: none"> 1. Identify the importance of digital marketing for marketing success. 2. Manage customer relationships across all digital channels and build better customer relationships. 3. Create a digital marketing plan, starting from the SWOT analysis and defining a target group, then identifying digital channels, their advantages, and limitations. 4. Perceive ways of integration, taking into consideration the available budget. |

SYLLABUS

UNIT I

Introduction: Marketing and its definition, Digital Marketing, How we do Marketing, Benefits of Digital marketing, Digital marketing platforms and Strategies, Defining Marketing Goals, Latest Digital marketing trends, introduction to traditional and new methods of marketing Requirement: Requirements for digital marketing, its uses.

UNIT II

Search Engine Optimization: Introduction to Search Engines, How the search engine works, Components of Search Engines. Keyword Research and Competition: Introduction to Keyword Research, Types of Keywords, Keyword Research Methodology, Business Analysis & Categorization, Google Keyword Planner, Market Research and Analysis, New Keyword Ideas, Competition Analysis, Finalizing the Keywords List.

UNIT III

On page Optimization: Introduction to On page ,What is Webmaster Tools, Selecting Target Location, On page Analysis Methodology, Fundamental On-page Factors , Website Speed , Domain name in SEO, URL Optimization , Title Tag Optimization , Meta Tags Optimization , Content Optimization , Sitemaps Generation , Using Robot.txt in Site URL , Redirecting Techniques , Canonical Links, Rich Snippets.

UNIT IV

Off page Optimization: What are Link Building, Types of Linking Methods, and Do Follow Vs.? No Follow Link building Guidelines , Linking Building Methodology, Links Analysis Tools , Directory Submissions , Local Business Directories, Social Bookmarking, Using Classifieds for In bound traffic, Question and Answers , Blogging & Commenting , Guest Blogging Local SEO: What is Local SEO, Importance of Local SEO ,Submission to Google My Business , Completing the Profile , Local SEO Ranking Signals, Local SEO Negative Signals , Citations and Local Submissions

| S. No | Name | Author(s) | Publisher |
| 1 | Digital Marketing for Dummies | Ryan Deiss & Russ Henneberry | John Wiley & Sons, Inc., |
| 2 | Social Media Marketing All-in-one Dummies | Jan Zimmerman, Deborah Ng | John Wiley & Sons Inc, 4 th edition |

| | |
|-----------------------------|--|
| Course Code | CSE378 |
| Course Title | Advanced Parallel Computing |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Basic knowledge of Computer System Architecture |
| Course Objectives | Students become familiar with parallel computer architecture and algorithms. |
| Course Outcome(CO) | <ol style="list-style-type: none"> 1. Understand basic terms used in parallel computing. 2. Classify parallel computers. 3. Describe parallel computer architecture. 4. Analyze parallel algorithms. |

SYLLABUS

UNIT-I

Introduction to Parallel Computing: Basic concepts about program/process/ thread, Concurrent Execution, Parallel Execution, granularity, Potential of Parallelism; Need of Parallel Computation; Levels of parallel processing; Parallel processing Vs. Parallel computing; Dataflow Computing concept; Applications of parallel processing-Scientific Applications / Image processing, Engineering Application, Database query/ Answering applications, AI Applications, Mathematical simulations and modeling

Classification of Parallel Computers: Types of Classification; Flynn's/ Handler classification; UMA / NUMA /COMA; loosely coupled / tightly coupled; Classification based grain size and Instruction level parallelism.

UNIT-II

Interconnection Network: Need of Interconnection Network Concept Band width Nod degree diameter bisection bandwidth, In degree and Out degree; Static and Dynamic Interconnection network; Omega, Parallel Shifter, Bens, permutation, hypercube, butterfly; Shuffle exchange Network

Parallel Computer Architecture: Introduction to various computer architecture Pipeline processing; Vector / Array processing; VLIW and Super scalar architecture; Associative architecture -Multithreaded architecture.

UNIT-III

Parallel Algorithm & Parallel Programming

Parallel Algorithm: Introduction to Parallel Algorithms; Analysis of Parallel Algorithms; Different models of computation – Combinational Circuit, Permutation Circuit, Sorting Circuit, Matrix Computation.

PRAM Algorithms: Message passage programming -Shared memory, Message passing libraries, Data Parallel programming; Data Structures for parallel algorithms-Link list, Arrays pointers, Hypercube network.

Parallel Programming: Introduction to Parallel Programming; Types of parallel programming – Programming based on message passing, data parallelism, Programming for shared memory systems, Example programs for parallel systems.

UNIT- IV

Advanced Topics

Operating System for Parallel Computers: Basic issues of Operating Systems for Parallel Computers; Process Management; Resource Management; Memory management; I/O Management; Inter-Processor Communication; Vectorisation Compiler

Performance Evaluation: Introduction to performance evaluation; Metric of Parallel overhead; Law Speedup; Measurement Tools

Recent Trends: Multi-component CPU; Apex architecture IA64; Hyperthreading

| RECOMMENDED BOOKS | | | |
|-------------------|---|--|--|
| Sr.no. | Name | AUTHOR(S) | PUBLISHER |
| 1 | Advanced Computer Architecture: Parallelism, Scalability, Programmability | Hwang, K | Tata McGraw Hills |
| 2 | Introduction to Parallel Processing | Sasikumar M., Shikhare, D., Ravi Prakash | Prentice Hall of Indiapvt.ltd. New Delhi |
| 3 | Computer Architecture and Parallel Processing | Hwang, K., Briggs, F. A. | McGraw Hill |

| | |
|-----------------------------|--|
| Course Code | CSE320 |
| Course Title | Optimization Techniques in Machine Learning |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Discrete mathematics |
| Course Objectives | To understand learning models and learning algorithms |
| Course Outcomes(CO) | <ol style="list-style-type: none"> 1. Recognize the characteristics of machine learning that make it useful to real-world problems. 2. Characterize and differentiate between supervised and unsupervised learning techniques. 3. Explain Reinforcement Learning and its control. 4. Represent concepts of Decision Trees. |

SYLLBUS

UNIT I

Introduction: Basic concepts, machine learning problems, types of learning, designing a learning system, goals and applications of machine learning.

Learning Theory: Bias–variance tradeoff, Union and Chernoff/ Hoeffding bounds, VC dimension, worst case (online) learning, learning algorithms.

UNIT II

Supervised Learning: Supervised learning setup, LMS, Logistic Regression, Perceptron, Exponential Family, Generative Learning Algorithms, Gaussian Discriminant Analysis, Naive Bayes, Support Vector Machines, model selection and feature selection.

Unsupervised Learning: Clustering, K-means, EM, Mixture of Gaussians, Factor Analysis, PCA (Principal Components Analysis), ICA (Independent Components Analysis).

UNIT III

Reinforcement Learning and Control: MDPs, Bellman equations, value iteration and policy iteration, Linear Quadratic Regulation (LQR), LQG, Q-learning, value function approximation, policy search, Reinforce, POM.

UNIT IV

Decision Tree Learning: Representing concepts as decision trees, recursive induction of decision trees, picking the best splitting attribute (entropy and information gain), searching for simple trees and computational complexity, Occam's razor, overfitting, noisy data.

| RECOMMENDED BOOKS | | | |
|--------------------------|--------------------------------------|-----------------------------------|-------------------------|
| Sr.no. | Name | AUTHOR(S) | PUBLISHER |
| 1 | PatternRecognitionandMachineLearning | Bishop,C. | Berlin:Springer-Verlag. |
| 2 | ElementsofStatisticalLearning | Hastie,Tibshirani, andFriedman | Springer |
| 3 | MachineLearning | TomMitchell | Mc-GrawHill |

| | |
|-----------------------------|--|
| Course Code | CSE322 |
| Course Title | Distributed System |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Basic knowledge of object-Oriented programming, data structures, threads, operating system concepts. |
| Course Objectives | This course provides a complete understanding of distributed systems and their various applications in the field of Computer Science. |
| Course Outcome(CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Identify the characteristics of distributed systems. 2. Explain the system models of distributed processing and communication. 3. Explain distributed deadlock detection. 4. Explain distributed transactions and their types. |

SYLLABUS

UNIT-I

Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Issues in Distributed Operating Systems, Resource sharing and the Web Challenges.

System Models: Architectural models, Fundamental Models Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport's & vector logical clocks, Causal ordering of messages, global state, and termination detection.

UNIT-II

Distributed Mutual Exclusion: Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and non token based algorithms, performance metric for distributed mutual exclusion algorithms.

Distributed Deadlock Detection: system model, resource Vs communication deadlocks, deadlock prevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms.

UNIT – III

Agreement Protocols: Introduction, system models, classification of agreement problems – Interactive Consistency Problem, applications of agreement algorithms.

Distributed Objects and Remote Invocation: Communication between distributed objects, Remote Procedure Call (RPC), events and notifications, Java RMI case study.

Transactions and Concurrency Control: Transactions, nested transactions, locks, optimistic concurrency control, timestamp ordering, comparison of methods for concurrency control.

UNIT – IV

Distributed Transactions: Introduction, flat and nested distributed transactions, atomic commit protocols, concurrency control in distributed transactions, distributed deadlocks, transaction recovery.

Distributed Shared Memory: Design and implementation issues, consistency models.

CORBA Case Study: CORBA RMI, CORBA services.

File System: File service components, design issues, interfaces, implementation techniques, Sun Network File System – architecture and implementation, other distributed file systems – AFS, CODA.

Name Services: SNS name service model.

RECOMMENDED BOOKS

| Sr.no. | Name | Author(s) | Publisher |
|--------|--|---|------------------|

| 2 | Distributed Operating Systems | S.Tanenbaum | PearsonEducation |

| | |
|-----------------------------|---|
| Course Code | CSE324 |
| Course Title | Wireless Communications |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Nil |
| Course Objective | To gain an understanding of the principles behind the design of wireless communication systems and technologies. |
| Course Outcomes | The learner will be able to – <ol style="list-style-type: none"> 1. Understand and explain the classification of mobile communication systems. 2. Examine state-of-the-art distributed systems, such as the Google File System. 3. Learn the principles, architecture, algorithms, and programming models used in distributed systems. |

UNIT – I

Introduction: A basic cellular system, performance criteria, operation of cellular systems, planning a cellular system, analog and digital cellular systems.

Examples of Wireless Communication Systems: Paging systems, cordless telephone systems, cellular telephone systems.

GSM System: Architecture and features; GSM services; authentication; incoming and outgoing call flow; handover in GSM.

UNIT – II

Digital Communication through Fading Multipath Channels: Fading types and their characteristics; concept of diversity branches and signal paths; combining methods – selective diversity combining, pre-detection and post-detection combining, switched combining, maximal ratio combining, equal gain combining.

Different Types of Channels: Control channels and traffic channels.

BTS Hardware: Introduction to BTS 3900 series; Baseband Unit (BBU); Radio Frequency Unit (RFU); description of cards; login to BTS 3900.

UNIT – III

Multiple Access Techniques for Wireless Communications: Introduction; Frequency Division Multiple Access (FDMA); Time Division Multiple Access (TDMA); Spread Spectrum Multiple Access; Code Division Multiple Access (CDMA); Space Division Multiple Access; WCDMA (Wideband CDMA) features and architecture; handoff and its types.

UNIT – IV

Wireless Systems and Standards: GPRS/EDGE specification, features and architecture; 3G systems; applications of 3G, UMTS, and CDMA 2000 standards; specifications and architecture of UMTS; forward CDMA channel; reverse CDMA channel.

BSC Hardware: Introduction to 6900 series; MPR and EPR; description of cards; login to BSC 6900.

Future Trends: Bluetooth technology; 4G mobile techniques; Wi-Fi technology advanced system; Zigbee.

| RECOMMENDED BOOKS | | | |

| | |
|-----------------------------|--|
| Course Code | CSE326 |
| Course Title | Block Chain |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | This course has no prerequisite other than knowledge of probability and statistics, and programming skills. |
| Course Objectives | The objective of this course is to teach students the architecture of block chain. By taking this course, the students are expected to understand the basic algorithms, and be able to apply these Techniques to financial service, supply chain. |
| Course Outcome (CO) | The learner will be able to – <ul style="list-style-type: none"> 1. Understand the basic architecture of blockchain. 2. Understand the theory of Bitcoin. 3. Describe the components of blockchain. 4. Explain applications of blockchain in financial services and supply chain management. |

SYLLABUS

Unit-I

Introduction to Block chain–I: Basics, History, Architecture, Conceptualization, and Bitcoinbasics.

Unit-II

Consensusin Bitcoin–I (The Basics, Po Wand Beyond, The Miners), PermissionedBlockchain (Basics, Consensus)

Unit-III

Block chain for Enterprise–Overview, Block chain Components and Concepts, Hyperledger Fabric Transaction Flow, Hyperledger Fabric Details. Fabric – Membership and Identity Management

Unit-IV

Block chain UseCases.Block chain in Financial Service (Payments and Secure Trading, Compliance and Mortgage, Financial Trade). Block chain in Supply Chain

BlockchaininOtherIndustries.BlockchaininGovernment (Advantages, UseCases, Digital Identity)

| RECOMMENDED BOOKS | | |

| Name | AUTHOR(S) | PUBLISHER |
| Block chain | Melanie Swa, O'Reilly | O'Reilly |
| Zeroto Block chain, An IBM Redbooks course | BobDill, DavidSmits | https://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/crse0401.html |

| | |
|-----------------------------|---|
| Course Code | CSE376 |
| Course Title | ADVANCE DATA BASE MANAGEMENT SYSTEM |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Basic knowledge of database and relational database management systems. |
| Course Objectives | This course is intended to provide an understanding of the current theory and practice of database management systems, a solid technical overview of database management systems. In addition to technical concerns, more general issues are emphasized. These include data independence, integrity, security, recovery, performance, database Design principles and data base administration. |
| Course Outcome (CO) | <p>The learner will be able to –</p> <p>CO1: Explain the features of database management systems and relational databases.</p> <p>CO2: Analyze the existing design of a database schema using ER diagrams and apply concepts of normalization to design an optimal database.</p> <p>CO3: Identify the need for concurrent transactions and locking, and explain their types, advantages, and disadvantages.</p> <p>CO4: Formulate query solutions using SQL for a broad range of queries and data update problems.</p> <p>CO5: Explain spatial and multimedia databases.</p> |

Syllabus

UNIT I

Introduction: Introduction to DBMS, RDBMS, Types of DBMS and their advantages and disadvantages, Types of relational query language, E-R Diagram, Keys, Normalization, Query optimization

Transaction Processing and Concurrency Control: Transaction Management, Concurrency Control and Serializability Recoverability and Strictness; Two-phase locking, Multiple Granularity, Timestamp based Protocol.

Data base protection in RDBMS–Integrity, Availability

UNIT II

Distributed Databases: Basic concepts, structure, trade-offs Methods of data distribution – fragmentation, replication, design & advance concepts of DDBMS like Two-phase commit protocol, distributed transaction, distributed concurrency control, distributed deadlock handling.

Introduction to object-oriented databases: Object Oriented Data model, Object Oriented Database Management System, Object Query Language, Object Oriented Relational Database Management System and its concepts.

UNITIII

Dataware housing Concepts: Architecture, Data flows, Tools & Technologies, Data Marts, Data Mining and Online Analytical Processing.

UNITIV

Emerging Database Technologies: Spatial & Multimedia data bases, Mobile Computing & Mobile Databases

New Topics and Applications: (a) Information Retrieval (b) Bioinformatics (c) Incomplete and Uncertain Databases (d) Non-relational Databases, (e) Data Stream Management

| RECOMMENDED BOOKS | | | |

***7th
Semester***

| | |
|-----------------------------|--|
| Course Code | CSE479 |
| Course Title | Cyber security |
| Type of Course | PC |
| LTP | 300 |
| Credits | 3 |
| Course Prerequisites | Basic knowledge of computer system |
| Course Objective(CO) | The main aim of this course is to provide knowledge about how to secure our data on the Internet. |
| Course Outcome(CO) | The students will be able to: <ol style="list-style-type: none"> 1. Implement cyber security best practices and risk management. 2. Integrate network monitoring and present real-time solutions. 3. Assess the impact of cybersecurity risks in an ethical, social, and professional manner. 4. Learn the basics of cyber laws and cyber forensics. |

SYLLABUS

UNIT – I

Introduction to Cyber Security: Overview of Cyber Security; Cyber Threats – Cyber Warfare, Cyber Crime, Cyber Terrorism, Cyber Espionage.

Cyber Security Vulnerabilities and Cyber Security Safeguards:

- **Cyber Security Vulnerabilities** – Overview; vulnerabilities in software; system administration; complex network architectures; open access to organizational data; weak authentication; unprotected broadband communications; poor cyber security awareness.
- **Cyber Security Safeguards** – Overview; access control; audit; authentication; biometrics; cryptography; deception; denial of service filters; ethical hacking; firewalls; intrusion detection systems; response; scanning; security policy; threat management.

UNIT – II

Securing Web Applications, Services, and Servers: Introduction; basic security for HTTP applications and services; basic security for SOAP services; identity management and web services; authorization patterns; security considerations; challenges.

Intrusion Detection and Prevention: Intrusion; physical theft; abuse of privileges; unauthorized access by outsiders; malware infection; intrusion detection and prevention techniques; anti-malware software; network-based intrusion detection systems; network-based intrusion prevention systems; host-based intrusion prevention systems; security information management; network session analysis systems; system integrity validation.

UNIT – III

Cryptography and Network Security: Introduction to cryptography; symmetric key cryptography; asymmetric key cryptography; message authentication; digital signatures; applications of cryptography.

Overview of Firewalls: Types of firewalls; user management; VPN security.

Security Protocols:

- Security at the application layer – PGP and S/MIME.
- Security at the transport layer – SSL and TLS.
- Security at the network layer – IPsec.

UNIT – IV

Cyberspace and the Law: Introduction; cyber security regulations; roles of international law; the state and private sector in cyberspace; cyber security standards.

The Indian Cyberspace: National Cyber Security Policy 2013.

| | |
|-----------------------------|--|
| Course Code | CSE407 |
| Course Title | Theory of Automata and Computation |
| Type of Course | PC |
| L T P | 400 |
| Credits | 4 |
| Course Prerequisites | Basic knowledge of Discrete mathematics and System programming, |
| Course Objectives | <ul style="list-style-type: none"> • Develop a formal notation for strings, languages, and machines. • Design finite automata to accept a set of strings of a language. • Prove that a given language is regular and apply the closure properties of languages. • Distinguish between computability and non-computability, and decidability and undecidability. |
| Course Outcome(CO) | <p>The student will be able to –</p> <ul style="list-style-type: none"> • Write a formal notation for strings, languages, and machines. • Design finite automata to accept a set of strings of a language. • For a given language, determine whether the language is regular or not. • Distinguish between computability and non-computability, and decidability and undecidability. |

SYLLABUS

UNIT-I

Basic Theory of Automata:

Sets, relations, functions, alphabet, string, languages.

Finite Automata:

Formal languages, deterministic and non-deterministic finite automata, finite automata with ϵ -moves, equivalence of NFA and DFA, minimization of finite automata, two-way finite automata, Moore and Mealy machines, applications of finite automata.

Regular Expressions:

Definition, algebraic laws, conversion of regular expression (R.E.) to finite automata (F.A.), finite automata to regular expression, applications, regular grammar for finite automata.

UNIT-II

Regular Sets and Context Free Grammars:

Properties of regular sets, context-free grammars, derivation trees, Chomsky Normal Form (CNF) and Greibach Normal Form (GNF), ambiguous and unambiguous grammars.

Pushdown Automata and Parsing Algorithms:

Pushdown automata and context-free languages, top-down parsing and bottom-up parsing, properties of CFL, applications of pumping lemma, closure properties of CFL and decision algorithms, Chomsky hierarchy

UNIT-III

Turing Machines:

Turing machines (TM), computable languages and functions, Turing machine constructions, storage and infinite control.

Variations of Turing Machines:

Recursive and recursively enumerable languages, recursive functions, partial and total recursive functions, primitive recursive functions.

UNIT-IV

Introduction to Computational Complexity:

Time and space complexity of Turing machines (TMs), complexity classes, introduction to NP-hardness and NP-completeness, PCP problem, concept of decidability and undecidability.

Undecidability:

Church-Turing thesis, universal Turing machine, the universal and diagonalization languages, reduction between languages and Rice's theorem, undecidable problems about languages.

RECOMMENDED BOOKS

The

| | |
|-----------------------------|---|
| Course Code | CSE481 |
| Course Title | Major Project |
| Type of Course | PROJ |
| L T P | 004 |
| Credits | 2 |
| Course Prerequisites | Nil |
| Course Objectives | The objective of the Major Project is to enable the student to work on a project, either fully theoretical, fully practical, or involving both theoretical and practical work, under the guidance of a Supervisor from the Department alone or jointly with a Supervisor drawn from an R&D laboratory or Industry. This is expected to provide good training for the student(s) in R&D work and technical leadership. |
| Course Outcomes (CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Understand the requirements of the project. 2. Prepare the report. 3. Present the findings before the department. |

Assignment shall normally include:

1. In-depth study of the topic assigned in the light of the study already done.
2. Review and finalization of the approach to the problem relating to the assigned topic, preferably in the area in which six weeks of industrial/institutional training was undertaken after the 6th semester.
3. Preparation of an action plan for conducting the investigation, including teamwork.
4. Detailed analysis, modelling, simulation, design, problem solving, and experimentation as needed.
5. Final development of the product/process, testing, results, conclusions, and future directions.
6. Preparation of a paper for conference presentation/publication in journals, if possible.
7. Preparation of a project report with running code in the standard format for evaluation by the Department.
8. Final seminar presentation before the Departmental Committee.

| | |
|-----------------------------|---|
| Course Code | CSE485 |
| Course Title | Four Weeks Industrial Training Evaluation (Under taken after 6thsemester) |
| Type of Course | SECIII |
| L T P | |
| Credits | 3 |
| Course Prerequisites | Basics of programming and software development |
| Course Objectives | To enhance the programming skills of a learner so that the learner can find solutions to problems. The learner also gains industrial experience in software development. |
| Course Outcomes-(CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Implement software using proper software life cycle models. 2. Work with the latest IT tools. 3. Develop team leadership skills. |

The six weeks industrial training will give exposure to the practical aspects of the discipline, in the real-time working scenario. In addition, the student may also work on a specified task or project which may be assigned to him/her, by the industry person. The student will maintain the daily diary which will have sign turbofan industry expert, assigned to him/ her. This daily diary will be produced by the student during practical examinations, as and when scheduled by the institute. The department will evaluate student performance based on his/her project report, running software code, CD containing code and daily diary.

| | |
|-----------------------------|---|
| Course Code | CSE451 |
| Course Title | Cryptography |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Basic Knowledge of complexity theory, algorithms, game theory, machine learning |
| Course Objectives | This coursework provides a thorough understanding of network security and various cryptography techniques to obtain security on networks and computers. |
| Course outcome(CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Understand concepts related to security attacks, encryption and decryption techniques, and substitution and transposition techniques. 2. Describe the principles of public key cryptography and the RSA algorithm. 3. Explain authentication requirements and the use of hash functions. |

SYLLABUS

UNIT – I

Introduction: Attacks, services, and mechanisms; security attacks; security services; model for internetwork security.

Conventional Encryption: Conventional encryption model; steganography. **Classical Encryption Techniques:** Substitution techniques; transposition techniques.

UNIT – II

Modern Encryption Techniques: Simplified Data Encryption Standard (S-DES); block cipher principles; Data Encryption Standard (DES); strength of DES. **Encryption Algorithms:** Triple DES; International Data Encryption Algorithm (IDEA); Blowfish.

UNIT – III

Confidentiality Using Conventional Encryption: Placement of encryption function; traffic confidentiality; key distribution; random number generation. **Public-Key Cryptography:** Principles of public-key cryptosystems; RSA algorithm; key management; Diffie–Hellman key exchange.

UNIT – IV

Message Authentication and Hash Functions: Authentication requirements; authentication functions; message authentication codes (MACs); hash functions; security of hash functions and MACs; digital signatures; authentication protocols; SHA-1; RC-4; RC-5.

| | |
|-----------------------------|--|
| Course Code | CSE453 |
| Course Title | Multimedia & Animation |
| Type of Course | PE |
| L T P | 300 |
| Credits | 3 |
| Course Prerequisites | Basic knowledge of Computer Graphics & Image Processing. |
| Course Objectives | The main objective of the subject is to impart knowledge about animation execution, workflow, and post-production. |
| Course Outcomes (CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Understand the fundamentals of animation. 2. Gain knowledge of 3D modeling tools. 3. Compare polygon modeling and NURBS modeling. |

SYLLABUS

UNIT – I

Fundamentals of Animation: Animation drawings/cells, rough drawings, clean-ups, color reference drawings, layout, model sheet, key drawing, master background, concept piece, character drawing, storyboard.

Modeling Concepts: Introduction to Maya, types of 3D modeling, advantages and disadvantages, difference between polygon modeling and NURBS modeling.

Texturing – Assigning Materials to Models: UV texturing; texturing of characters and props; shading; different Maya shaders.

UNIT – II

Lighting and Shadows: Sources of light – natural and artificial lights; types of lights in Maya; types of shadows in Maya.

Rigging and Skinning of a Model: Joints, inverse kinematics, forward kinematics, types of skinning.

Animation Types: Types of animation; stop motion vs. motion graphics.

UNIT – III

Rendering Process: Process; types of renderers.

Data Management: How to manage 3D assets.

Compositing: Basics of compositing; chroma keying; background colors; even lighting; processing the video; various tools used.

UNIT – IV

Music and Dubbing: Process of adding music to the clip; tools used for placing and editing the soundtracks.

Editing Clips: Process; tools used for editing.

Output and Formats: Types of output formats; lossless and lossy compression techniques.

| Course Objectives | The objective of this course is to provide knowledge of the fundamentals of speech and text processing. |
| Course Outcomes(CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Understand basic concepts of natural language processing. 2. Explain machine translation and speech recognition. |

UNIT-I

SYLLABUS

UNIT – I

Introduction: Natural Language Processing (NLP), challenges of NLP, NLP applications, processing of Indian languages.

UNIT – II

Structures: Theories of parsing; parsing algorithms; robust and scalable parsing on noisy text such as web documents; hybrid of rule-based and probabilistic parsing; scope ambiguity and attachment ambiguity resolution.

UNIT – III

Understanding Part of Speech and Text Processing: Tokenization; sentence segmentation or splitting; normalization.

UNIT – IV

Words and Word Forms: Morphology fundamentals; morphological diversity of Indian languages; morphology paradigms; finite state machine-based morphology; automatic morphology learning; shallow parsing; named entities; maximum entropy models; random fields; scope ambiguity and attachment ambiguity resolution.

| | |
|-----------------------------|---|
| Course Code | CSE477 |
| Course Title | Data mining in Business Intelligence |
| Type of Course | PE |
| L TP | 300 |
| Credits | 3 |
| Course Prerequisites | Basic knowledge of Data mining in Business Intelligence |
| Course Objectives | Students will be enabled to understand and implement classical models and algorithms in data mining. |
| Course Outcomes (CO) | The learner will be able to – <ol style="list-style-type: none"> 1. Understand data mining and its scope. 2. Understand various data mining techniques. 3. Describe supervised and unsupervised clustering techniques. 4. Illustrate applications of data mining using real-life examples. |

SYLLABUS

UNIT – I

Introduction to Data Mining: Introduction; scope of data mining; what is data mining; how data mining works; predictive modeling; data mining and data warehousing; architecture for data mining; profitable applications; data mining tools.

Data Preprocessing: Introduction; data preprocessing overview; data cleaning; data integration and transformation; data reduction; discretization and concept hierarchy generation.

UNIT – II

Data Mining Techniques – An Overview: Introduction; data mining vs. database management systems; data mining techniques – association rules, classification, regression, clustering, neural networks.

UNIT – III

Clustering: Introduction; cluster analysis; clustering methods – K-means, hierarchical clustering, agglomerative clustering, divisive clustering; clustering and segmentation software; evaluating clusters.

UNIT – IV

Applications of Data Mining: Introduction; business applications using data mining – risk management and targeted marketing; customer profiles and feature construction; medical applications; scientific applications using data mining.

|-----------------------------|---|
| Course Code | CSE391 |
| Course Title | Basics of Artificial Intelligence |
| Type of Course | OE |
| L:T:P | 3:0:0 |
| Credits | 3 |
| Course Prerequisites | Nil |
| Course Objective(s) | <ol style="list-style-type: none"> 1. To get introduced to the basic knowledge representation, problem solving, and learning methods of Artificial Intelligence. 2. To solve problems in Artificial Intelligence using Python. 3. To familiarize yourself with knowledge processing in expert systems.. |
| Course Outcome(CO) | <p>CO1. Understand the informed and uninformed problem types and apply search strategies to solve them.</p> <p>CO2. Apply difficult real-life problems in a state space representation to solve them using AI techniques like searching and game playing.</p> <p>CO3. Design and evaluate intelligent expert models for perception and prediction from an intelligent environment..</p> |

SYLLABUS

Unit 1: Foundations of Artificial Intelligence

Introduction to AI: Definition and brief history of Artificial Intelligence; AI applications across different domains; overview of AI subfields – symbolic AI, machine learning, and deep learning.

Search Algorithms and Knowledge Representation:

- Problem-solving agents
- **Uninformed Search Algorithms:** Breadth-first search, Depth-first search
- **Informed Search Algorithms:** A* search, Heuristic search
- Propositional logic and first-order logic (syntax and semantics, resolution and inference)
- Semantic networks and frames (representation and inference)

Unit 2: Machine Learning Basics

Introduction to Machine Learning: Basics of machine learning; supervised, unsupervised, and reinforcement learning; evaluation metrics in machine learning.

Classical Machine Learning Algorithms:

- **Linear Regression:** Simple and multiple linear regression, gradient descent optimization
- **Logistic Regression:** Binary and multinomial logistic regression, sigmoid function, and probability estimation
- **Decision Trees and Ensemble Methods:** Decision tree construction; bagging, boosting, and random forests

Unit 3: Deep Learning and Neural Networks

Neural Networks: Introduction to artificial neural networks (Perceptrons and activation functions, feedforward and backpropagation)

- Multi-layer Perceptrons (hidden layers and network architecture, activation functions)
- Training neural networks (gradient descent and stochastic gradient descent, regularization techniques)

Unit 4: Applications and Ethical Considerations

Natural Language Processing (NLP): Basics of NLP; text preprocessing and tokenization; NLP applications – sentiment analysis, named entity recognition, part-of-speech tagging, word embeddings and semantic similarity.

Reinforcement Learning and Ethical Implications:

- Introduction to reinforcement learning (Markov decision processes, policy iteration, and value iteration)
- Q-learning and deep Q-networks (DQN) – experience replay and target networks, deep reinforcement learning algorithms
- Privacy concerns and data ethics – data anonymization and de-identification techniques, case studies of AI regulation worldwide

| L TP | 300 |
| Credits | 3 |
| Course Prerequisites | Distributed System, Operating Systems and Networking |
| Course Objectives (CO) | This coursework provides a complete understanding of cloud systems, their implementation techniques, and their various applications in the field of Computer Science. |
| Course Outcome | The learner will be able to- <ol style="list-style-type: none"> 1. Understand characteristics and type of cloud computing 2. Describe architecture of cloud computing 3. Explain applications of cloud 4. Demonstrate their knowledge of cloud computing to real world examples |

SYLLABUS

UNIT – I

Introduction to Cloud Computing: History of cloud computing; importance; characteristics of cloud computing; benefits and challenges to cloud architecture.

UNIT – II

Types of Cloud: Public cloud, private cloud, hybrid cloud, and community cloud; differences between public and private cloud; status of cloud computing in India; cloud service models; role of virtualization in enabling the cloud.

UNIT – III

Cloud Computing Architecture: Logical architecture; developing holistic cloud computing reference models; seven-step model of migrating to cloud.

UNIT – IV

Applications and Case Studies: Case study of cloud computing; cloud computing risks; cloud tools; cloud applications; future trends; mobile cloud.

| Credits | 3 |
| Course Prerequisites | Overview of Computer Architecture |
| Course Objectives | <p>Course Objectives:</p> <p>The course aims to teach the fundamentals of Operating Systems:</p> <ol style="list-style-type: none"> 1. To learn the mechanisms of an OS to handle processes and threads, and their communication. 2. To learn the mechanisms involved in memory management in contemporary OS. 3. To gain knowledge of distributed operating system concepts, including architecture, mutual exclusion algorithms, deadlock detection algorithms, and agreement protocols. 4. To understand the components and management aspects of concurrency control. 5. To learn to implement simple OS mechanisms. |
| Course Outcome (CO) | <p>The learner will be able to-</p> <ol style="list-style-type: none"> 1. Create processes and threads. 2. Develop algorithms for process scheduling for a given specification of CPU utilization, Throughput, Turn around Time, Waiting Time, Response Time. 3. For a given specification of memory organization develop the techniques for optimally allocating memory to processes by increasing memory utilization and improving the access time. 4. Design and implement file management system. 10. For a given I/O devices and OS (specify) develop the I/O management functions in OS as part of a uniform device abstraction by performing operations for synchronization between CPU and I/O controllers. |

SYLLABUS

UNIT-I

Introduction: Operating Systems functions, Types of operating systems, Multiprogramming systems, Batch systems, Time-sharing systems.

UNIT-II

Operating System Organization: Processor and user modes, user operating system interface, Kernels, System calls and its types, System programs, Operating system

structures, Virtual machines.

UNIT-III

Memory Management: Physical and virtual address space, Memory allocation strategies, Paging, Segmentation, Virtual memory and Demand paging, Page replacement algorithms.

File and I/O Management: Directory structure, File operations, Files system mounting, File allocation methods, Device management, Disk scheduling algorithms.

UNIT-IV

OS and Security: Security breaches, types of attacks, attack prevention methods, security policy and access control, OS design considerations for security, access control lists and OS support, internet and general network security, Policy mechanism, Program, network and system threats, Authentication.

SYLLABUS

UNIT – I

Introduction to Network Technology:

SLIP/PPP, dedicated lines, BOOTP, DHCP, domain management (DNS), transport layer issues, TCP/IP, gateway, dial-up, internet networking TCP/IP protocols, IP addressing.

UNIT – II

Basics of Network Security: Fundamentals of network security; basics of IPv6; IPsec – overview, IP and IPv6, Authentication Header (AH), Encapsulating Security Payload (ESP).

Security Trends: Attacks and services; classical cryptosystems; different types of ciphers; LFSR sequences; basic number theory; congruences; Chinese Remainder Theorem; modular exponentiation; Fermat and Euler's theorems; Legendre and Jacobi symbols; finite fields; continued fractions.

UNIT – III

Model of Network Security: Classical encryption techniques – symmetric cipher model, substitution techniques, transposition techniques; block cipher and the Data Encryption Standard (DES) – modes of operation, Triple DES, AES, RC4; RSA; attacks; primality test; factoring.

Discrete Logarithms: Digital signatures – RSA, ElGamal, DSA; unwanted traffic – denial of service attacks.

UNIT – IV

Authentication Applications: Kerberos, X.509, PKI, electronic mail security, PGP, S/MIME, IP security, web security, SSL, TLS, SET.

System Security: Intruders, malicious software, viruses, firewalls and filters, security standards.

Integrate network monitoring and present real-time solutions. 3. Assess the impact of cybersecurity risks in an ethical, social, and professional manner. 4. Learn the basics of cyber laws and cyber forensics. |

SYLLABUS

UNIT – I

Introduction to Cyber Security: Overview of cyber security; cyber threats – cyber warfare, cyber crime, cyber terrorism, cyber espionage.

Cyber Security Vulnerabilities and Safeguards:

- **Vulnerabilities:** Overview; vulnerabilities in software, system administration, complex network architectures, open access to organizational data, weak authentication, unprotected broadband communications, poor cyber security awareness.
- **Safeguards:** Overview; access control, audit, authentication, biometrics, cryptography, deception, denial of service filters, ethical hacking, firewalls, intrusion detection systems, response, scanning, security policy, threat management.

UNIT – II

Securing Web Applications, Services, and Servers: Introduction; basic security for HTTP applications and services; basic security for SOAP services; identity management and web services; authorization patterns; security considerations; challenges.

Intrusion Detection and Prevention: Intrusion; physical theft; abuse of privileges; unauthorized access by outsiders; malware infection; intrusion detection and prevention techniques; anti-malware software; network-based intrusion detection systems; network-based intrusion prevention systems; host-based intrusion prevention systems; security information management; network session analysis systems; system integrity validation.

UNIT – III

Cryptography and Network Security: Introduction to cryptography; symmetric key cryptography; asymmetric key cryptography; message authentication; digital signatures; applications of cryptography.

Firewalls and Security Protocols: Overview of firewalls – types of firewalls, user management, VPN security.

- **Security Protocols:** Security at the application layer – PGP and S/MIME; security at the transport layer – SSL and TLS; security at the network layer – IPSec.

UNIT – IV

Cyberspace and the Law: Introduction; cyber security regulations; roles of international law; the state and private sector in cyberspace; cyber security standards.

Indian Cyberspace: National Cyber Security Policy 2013.

| Course Outcome (CO) | <ul style="list-style-type: none"> • CO1: Understand core entrepreneurial traits. • CO2: Identify personal strengths and areas for growth. • CO3: Develop curiosity and initiative. |

Introduction

This course provides students with a holistic framework to develop entrepreneurial skills across the student's journey. The curriculum covers core principles of entrepreneurship, including identifying business opportunities, setting up operations, marketing, scaling, and financial management.

Throughout the program, students will choose 01 track from 5 specialized tracks:

Content Creation: This track focuses on empowering students to create, curate, and market digital content across various platforms. Students will learn how to build a personal or brand identity, develop engaging content, and monetize their platforms, whether through social media, video production, blogging, or influencer marketing.

Retail Business: This track introduces students to the fundamentals of starting and managing small-scale retail ventures. Learners will discover how to identify in-demand products, source suppliers, set up shop (physical or home-based), and attract local customers.

Professional Services: In this track, students will learn how to capitalize on freelance and contract-based opportunities. They will explore strategies for building a sustainable service-based business, manage client relationships, and maximize the flexibility that comes with this track.

E-commerce: In this track, students will learn how to build, manage, and scale an online business. From setting up an e-commerce platform to managing digital marketing strategies, inventory, and customer experience, this specialization provides the tools needed to succeed in the rapidly growing digital marketplace.

Miscellaneous: This track gives students the freedom to explore unique and diverse business ideas that don't fit into one category. Learners can identify opportunities around them, test simple solutions, and create small ventures based on local needs or personal interests. The focus is on creativity, problem-solving, and learning how to turn everyday ideas into earning opportunities.

The focus is on practical application, with students engaging in real-world projects that culminate in the creation and scaling of a business.

Learning Objectives

By the end of this course, students will be able to:

- Understand and apply entrepreneurial principles to real-world business situations.
- Develop and implement business strategies across different industries.
- Use digital tools, including AI, to enhance and automate business operations.
- Build sustainable business models, manage financials, and scale operations.

Learning Outcomes

- Launch and manage a business within their chosen track.
- Identify profitable opportunities and develop innovative solutions.
- Implement marketing and sales strategies using both digital and traditional methods.
- Use financial metrics to track performance and make informed business decisions.
- Scale a business using operational systems and automation tools.

The aim of this course is to ensure that, by the end, learners acquire essential entrepreneurial competencies such as **strategic thinking, practical application, founders & growth mindset, operational skills, and foundational financial literacy.**

| Content Creation | | |
|----------------------------|--|---|
| Week/ Milestone | Milestone | Description |
| 1 | Start your journey as a content creator | Learn how to reach thousands of followers online by creating content |
| 2 | Decide your content topic | Explore different topics and finalize one topic on which you will create content |
| 3 | Start your own content channel | Launch your official channel on YouTube or Instagram and start building your audience |

| | | |
|----------|--|---|
| 4 | Plan your first week content calendar | Learn how to create a simple weekly content calendar that would keep your audience engaged and make them follow you |
| 5 | Plan and record your first video | Learn how to create a clear and catchy script for your first video and shoot it using your phone |
| 6 | Edit and launch your first video | Learn how to edit your video with trendy music and cool effects and launch your channel with first video |
| 7 | Reach first 100 followers | Use WhatsApp and personal Instagram account to tell people about your channel and reach first 100 followers/subscribers |
| 8 | Master the skill of engaging people with your content | Learn how to connect with your audience so they stay engaged and feel involved |
| 9 | Follow latest trends and famous influencers to | Learn how to use trending topics and tag well-known channels or creators to boost |

| | | |
|-----------|---|---|
| | grow your channel | your reach and attract more followers |
| 10 | Learn how you can make money from your content | Discover how to do brand deals and promote brands or products your followers truly care about |
| 11 | Make your first partnership | Reach out to 10 brands for partnership and turn one into your first paid deal |
| 12 | Plan your business growth | Create a 1 month plan on what to post on a weekly basis to grow your followers and earn money |

| E-commerce | | |
|----------------------------|---|---|
| Week/ Milestone | Milestone | Description |
| 1 | Learn how to start selling online | Learn what an E-commerce business is and how you can start selling online in less than 30 days |
| 2 | Choose your product | Explore different products and finalize what you want to sell online |
| 3 | Find a supplier who will deliver the product for you | Identify suppliers who can send your product directly to the customer and help you launch your E-commerce business |
| 4 | Create your E-commerce store | Make a simple online store using Instamojo and learn how to upload product images and description on the store |
| 5 | Activate payments on your store | Learn how to link your bank account to a payment gateway and integrate that with your Instamojo store to start receiving payments |

| | | |
|-----------|---|--|
| 6 | Launch your online store | Connect your domain name to your Instamojo account, create your launch poster, and officially launch your E-commerce store |
| 7 | Get first 100 people visit your online store | Learn how to write simple and catchy messages to promote your store and send it to 100 people |
| 8 | Make your first sale | Convert one paying customer and learn how to process the order from beginning to delivery |
| 9 | Create and post your first ad | Learn how to design a simple promotional ad and post it to bring in more people and sales |
| 10 | Take feedback from customers | Engage with your paid customers, take product feedback, and upload success stories or reviews on your website |
| 11 | Get a repeat customer or referral | Build trust with your paid customers to get either a repeat order or a referral |
| 12 | Plan your business growth | Make a 1 month plan to promote and grow your E-commerce store and earn more money |

Professional Service

| Week/ Milestone | Milestone | Description |
|----------------------------|--|--|
| 1 | Start your journey in professional services | Learn what is a service and how you can earn money by offering your skill as a service |
| 2 | Choose your service skill | Choose one skill you are good at and turn it into a service that people will pay for |

| | | |
|-----------|--|---|
| 3 | Find your ideal customer | Talk to people directly or through social media apps, understand who is willing to pay for your service and "WHY" |
| 4 | Build your online profile and show what you offer | Explore apps or websites such as WhatsApp Business, Upwork, or Urban Company, and learn how to create an online profile |
| 5 | Write your service description | Learn how to write your service in a simple and powerful way that gets people excited to try it |
| 6 | Finalize your pricing and launch your service | Learn how to set the right price that your customer finds fair and launch your service |
| 7 | Get first 100 leads for your service | Learn how to write catchy messages to promote your service in the market and get first 100 leads |
| 8 | Offer a free service and learn from feedback | Give your service for free to real users and use their feedback to make it better |
| 9 | Make your first sale | Get one paying customer for your service and work really hard to get a 5 star rating and a video testimonial |
| 10 | Build trust with customers and get repeat orders | Use your trust and good relationship with existing customers to get your first repeat customer |
| 11 | Earn your first referral | Start offering bonus or other additional services to your existing customers and get your first referral |
| 12 | Plan your business growth | Make a 1 month plan on how to get more customers and earn more money |

Retail Business

| Week/ Milestone | Milestone | Description |
|----------------------------|--|---|
| 1 | Learn how to start retail business | Understand how retail works, the types of business you can start, and talking to local shops |
| 2 | Choose your product and ideal customer | Look at products in demand in your area and choose what you'll focus on based on your customer needs |
| 3 | Find a supplier for your product | Identify suppliers or wholesalers who can give you quality products/raw materials at good prices |
| 4 | Setup your business | Arrange your shop/home or prepare your product stocked with shopkeepers |
| 5 | Decide product prices and prepare stock | Decide the right selling price, maintain a simple record of sales, and get ready to handle cash or digital payments |
| 6 | Launch your business | Put up posters near your shop, and share the announcement with friends, family, and local community groups |
| 7 | Promote your business in your area | Learn how to use simple ways to promote your business locally |
| 8 | Make your first sale | Ensure the buying process is smooth and the customer is happy |
| 9 | Take feedback from customers | Engage with your paid customers and take product feedback |
| 10 | Discover other platforms to grow your sales | Learn how to set up a free WhatsApp Business account for your shop and collect orders there |
| 11 | Get a repeat customer or referral | Build trust with your paid customers to get either a repeat order or a referral |

| | | |
|-----------|----------------------------------|--|
| 12 | Plan your business growth | Make a 1 month plan to promote and grow your retail business and earn more money |
|-----------|----------------------------------|--|

| Retail Business | | |

| Miscellaneous | | |
|----------------------------|---|---|
| Week/ Milestone | Milestone | Description |
| 1 | Start your journey as an Entrepreneur | Learn what entrepreneurship means and how you can start earning by solving problems around you |
| 2 | Identify and validate a problem to solve | Look around yourself, talk to people, and pick one real problem that many people face |
| 3 | Define your customer and their pain points | Find out who will buy from you, what difficulties they face, and why they need your solution |
| 4 | Generate business ideas and finalize one idea | Think of different ways to solve the problem, compare options, and choose one idea to move ahead with |
| 5 | Define your product or service | Decide clearly what product or service you will provide and how it will solve the customer's problem |
| 6 | Finalize your pricing and launch your business | Set a fair price for your product or service and take the first step to launch your business |

| | | |
|----|---|---|
| 7 | Promote your business and get first 100 leads | Tell people about your business using word of mouth, posters, or social media, and collect interest from 100 people |
| 8 | Make your first sale | Get your first paying customer and deliver your product or service with full effort |
| 9 | Take feedback from customers and improve | Listen to what customers say after using your product/service and make it better step by step |
| 10 | Build trust with customers and get your first repeat order | Keep your promise, give good quality, and motivate your customer to buy from you again |
| 11 | Earn your first referral and expand your sales | Ask happy customers to recommend you to friends and family so that you can grow your sales |
| 12 | Plan your business growth | Make a simple plan for the next month to get more customers, increase sales, and grow your business |

Evaluation Criteria

| Evaluation Component | Description | Weightage |
|-------------------------------|--|------------------|
| Weekly Task Completion | Timely submission of weekly tasks, including activities, reflection prompts, graded quizzes etc | 60% |
| Target Completion | Performance-based evaluation on hitting revenue or profit targets (e.g., generating ₹10,000 revenue) | 20% |
| Final Project | A comprehensive project depending the theme of the semester | 20% |

Recommended Readings

1. **Start with Why** - Simon Sinek

Explains how great leaders and entrepreneurs inspire action by starting with a clear sense of “why.” Perfect for understanding purpose-driven entrepreneurship.

2. **The Lean Startup** - Eric Ries

A must-read on how to test ideas, build fast, and learn quicker ideas for first-time entrepreneurs trying to reduce risk and start smart.

3. **Contagious: How to Build Word of Mouth in the Digital Age** - Jonah Berger

Introduces how small ideas spread and how anyone can build buzz, useful for content creators and small sellers.

4. **Shoe Dog** - Phil Knight (Founder of Nike)

An inspiring story of how a college runner built one of the world’s biggest shoe companies with almost nothing. Very relatable in its early struggle phase.

5. **Rework** - Jason Fried & David Heinemeier Hansson

Offers fresh, simple ideas about doing business differently. Ideal for breaking traditional thinking and seeing how less can be more.

✚ Syllabus Overview for Semester 1-5

| Semester | Learning Focus | Learner's demonstration | Revenue Target |
|----------|---------------------------------|-----------------------------------|----------------|
| 1 | Setup & Launch | Understand. Create. Start. | ₹10,000 |
| 2 | Marketing Basics | Engage. Share. Grow. | ₹40,000 |
| 3 | Operations & Scale | Earn. Deliver. Expand. | ₹80,000 |
| 4 | Organic Growth | Attract. Retain. Build. | ₹160,000 |
| 5 | AI Automation & Finance mastery | Simplify. Track. Sustain | ₹400,000 |

Semester 1: Setup & Launch

In Term 1, students will explore what entrepreneurship means and how it connects to their daily lives. They will learn to identify problems, shape simple business ideas, and test them in real settings. This semester builds the foundation—mindset, observation, value creation, and action.

Semester 2: Marketing Basics

In Term 2, students will learn how to attract customers and grow their visibility using digital platforms and community-based marketing strategies. Students will also begin to run paid advertising campaigns and learn how to optimize their marketing efforts.

Semester 3: Operations & Scale

This semester focuses on the day-to-day operations of running a business, including order fulfillment, customer service, and logistics. Students will also focus on scaling operations as demand grows, with an emphasis on managing resources effectively.

Semester 4: Organic Growth

Students will learn how to grow their businesses organically, using referrals, partnerships, and community engagement. This semester focuses on building a loyal customer base and using word-of-mouth marketing to increase reach and credibility.

Semester 5: AI Automation & Financial Mastery

The final semester prepares students for long-term sustainability. Students integrate AI to improve productivity, automate routine tasks, and enhance decision-making. They also dive deep into financial planning, learning to set income goals, track expenses, understand profit margins, and create simple financial forecasts. This semester helps students solidify their entrepreneurial identity design systems for financial stability and scalability.
