

SCHEME & SYLLABUS

Bachelor in Medical Laboratory Sciences

(Choice Based Credit System)

Program Code: UG027

Department of Life Sciences & Allied Health Sciences

(UIS)

Sant Baba Bhag Singh University

2021

ABOUT THE DEPARTMENT

The department of Life Sciences formerly known as the Department of Natural Sciences was established in the year 2015 with only two UG programmes. Over the years this department has flourished and is offering various Programmes and courses at graduate, post-graduate and doctorate level in field of Botany, Zoology, Biotechnology, Biochemistry, Microbiology and Laboratory Sciences. The department is nurtured by the highly qualified and dedicated Faculty, honored by various international and national awards. The department is blessed to have specialized faculties in various fields of Life Sciences viz. Plant physiology, Plant Biochemistry, Plant Microbe interaction, Stress Physiology, Chemical ecology, Microbial Physiology, Industrial Microbiology, Clinical microbiology, Microbial Biotechnology, Animal Biotechnology, Fisheries, Parasitology, Molecular biology, Entomology, Sericulture, Animal toxicology, Endocrinology, Biochemistry and Biodiversity.

SALIENT FEATURES OF THE DEPARTMENT

1. At SBBS University the focus of Department is on conducting innovative teaching, fundamental multidisciplinary research in life sciences.
2. The department is disseminating various educational missions via e-learning platform in the form of SWAYAM, Virtual lab etc.
3. The department is equipped with a number of instruments and facilities like, UV- Visible Spectrophotometer, High Speed Centrifuge, Deep Freezer, Laminar Air flow, Air Samplers, Autoclave, Incubator, Photo actometer, Air condition Labs, Wi-Fi, Library etc.
4. The department has organized a large number of conferences, seminars, symposia and workshops. National and International eminent scientists of the country have been associated with the Department as visiting and honorary professors.

B.Sc. MLS (Bachelor of Medical Laboratory Sciences)

BSc MLS is a route for the medical, non-medical and diploma students of 10+2 to join the community of medical laboratory professionals. The program is designed to build theoretical knowledge and practical skill set for performing & developing efficient and resource optimized medical testing procedures.

VISION

To bridge the gap between demand and supply for Life Science and Allied Health Professionals with grooming young generations along with their moral and spiritual development.

MISSION

To radiate the knowledge of Life Science and Allied Health Science through quality education by using latest technology, modern infrastructure and the framework needed for the development of professionals.

ELIGIBILITY CRITERIA

10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.

DURATION

3 Years

CAREER PATHWAYS

The program is designed to meet the growing requirement of qualified professionals in field of IT industry and education. B.Sc. graduates are hired both by Government and private organizations. They may join Post Graduation Courses further.

1. Government Jobs: Prepare students for various government jobs such as at govt. hospitals, military and other public sectors etc.
2. Higher Studies: This pathway prepares students for Higher Studies and helps in their research also.
3. Entrepreneurship: To set up new ventures.

PROGRAMME EDUCATIONAL OBJECTIVE (PEO)

PEO1.To provide a hands-on experience of the latest techniques.

PEO2.To improve critical and analytical abilities.

PEO3.To inculcate management and evaluation of laboratory information systems.

PEO4. To apply the subject related knowledge towards professional growth.

PROGRAMME OUTCOMES (PO)

PO1: Apply the knowledge and skills appropriate to discipline for quality clinical investigations.

PO2: Develop competency to think creatively, critically and objectively using core and inter-disciplinary excellence.

PO3: Demonstrate appropriate methods of specimen collection, handling, testing and reporting of clinical investigation.

PO4: Identify and evaluate clinical data and results by applying knowledge and skills.

PO5: Operate and maintain laboratory equipments employing appropriate quality control and safety procedures.

PO6: Have collaborative and multidisciplinary skills to work as an effective member or leader to achieve goals.

PO7: Acquire and apply latest knowledge by utilizing appropriate learning methods.

PO8: Recognize ethical and professional responsibilities, considering the impact on society and environment.

PO9: Communicate effectively and sensibly with a broad range of health care workers, co-workers as well as patients.

PO10: Become the government medical laboratory professionals, scientists, and mentors of the future.

PROGRAMME SPECIFIC OUTCOMES (PSO)

PSO1. Graduates will be able to demonstrate the ability to critically evaluate and properly and effectively communicate laboratory data and information from the scientific literature.

PSO2. Graduates will be able to evaluate clinical laboratory data and relate that data to various disease processes.

PSO3. Graduates will acquire an understanding of a variety of laboratory and computer skills/techniques/calculations that are used in biomedical research and clinical laboratories.

PSO4. Graduates will be able to understand and identify potential hazards and follow safe laboratory practices.

INDEX

S.No	Subject Code	Subject Name	Page No	Semester
1		All Course Scheme	7-13	
2	MLS 101	Human anatomy & Physiology – I	14-15	1

1	MLS302	Professional Training	0:0:26	0:0:26	6 Months (720 Hrs)	26

Professional Training

- There shall be six months of professional training after the fifth semester for candidates declared to have passed the examination in all the subjects.
- During the training, candidate shall have to work full time average 5 hours per day (each working day) for 5 calendar months.
- The Internship should be rotatory and cover Hematology, Histology & Cytology, Biochemistry, Microbiology, Endocrinology & Automation sections of Pathology laboratory.
- Based on the attendance and work done during posting the Director/Principal/ Head of Institution/Department shall issue 'Certificate of Satisfactory Completion' of training following which the University shall award the B.Sc. in Medical Laboratory Science Degree or declare the candidate eligible for the same.

No candidate shall be awarded degree without successfully completing six months internship.

Total Credit Hours: 26

Human Anatomy & Physiology-I

Course Code	MLS101
Course Title	Human Anatomy & Physiology-I
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	<ul style="list-style-type: none"> • To identify and relate basic concepts of structure and function of cells, tissues and organs. • To understand the anatomical organization, coordination and integrated functions of human body.
Course Outcomes	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students will be able to explain the anatomy, physiology and functions of various organs mentioned in chapters. • Students will understand the homeostatic mechanisms and altered physiology of digestive system. • Students will apply concepts and knowledge of terminology related to the cardiovascular, digestive system and structure and function of blood and lymphatic system

UNIT-I

General anatomy: Introduction to anatomical terms and organization of the human body, Definition of anatomy and its divisions, Terms of location, positions and planes.

Tissues –Definitions, Types, characteristics, classification, location and functions.

UNIT-II

Musculoskeletal system: Bones – types, structure, Bone formation and growth, Axial & appendicular skeleton, Joints–classification and structure, Types and structure of skeletal muscles, mechanism of muscle contraction, isotonic and isometric contractions, energy sources of muscle contractions, motor UNIT, Movements at the joints and muscles producing movements.

UNIT-III

Cardiovascular System: Circulatory system – Structure of the Heart, Structure of Blood Vessels – arterial and venous system. Anatomy of heart, cardiac cycle, heart sounds, definitions of cardiac output, stroke volume, principles of measurements of cardiac output. ECG – methods of recording and ECG waves. Normal values of blood pressure, heart rate and their regulation in brief.

Structure and Functions of Blood: Components, names of developmental stages of RBC, functions and fate of RBC, functions of WBC and platelets, Basis of blood coagulation and blood groups – ABO & Rh.

Lymphatic System: Gross and microscopic structure of lymphatic tissue - lymph vessels and lymph nodes, functions of lymph, structure and function of thymus and spleen.

UNIT-IV

Respiratory System: Parts; Nasal cavity and Paranasal air sinuses, trachea, Gross and microscopic structure of lungs, Diaphragm and Pleura, Principles of respiration, respiratory muscles, lung volumes and capacities, collection and composition of inspired alveolar and expired airs, transport of oxygen and carbon dioxide, brief account of respiratory regulation, Definition of hypoxia, Cyanosis and asphyxia, Methods of artificial respiration.

Digestive System: Parts of alimentary canal, structure and functions of tongue, pharynx, oesophagus, stomach, small and large intestine and anus, principles of secretion and movements of gastrointestinal tract. (G.I tract)

Digestive Glands: Structure and function of Salivary glands, liver and pancreas, functional anatomy of G.I.T and functions of G.I secretions.

Text and Reference Books

S. No	Name	Author(S)	Publisher
1.	Anatomy & Physiology- Ross and Wilson	Anne Waugh & Allison Grant	Churchill Living Stone
2	Anatomy and Physiology: Understanding the Human Body	Robert Clark	Jones & Bartlett publishers
3.	Functional Histology	James S. lowe, Barbara young, Allen Stevens & John W heath	Elsevier
4.	Text book of human Histology with color Atlas and Practical Guide	Inderjit singh	Jaypee Brothers Medical publishers
5.	Understanding Human Anatomy and Physiology	Willium Davis	McGraw Hill

Fundamentals of Biology

Course Code	MLS105
Course Title	Fundamentals of Biology
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	To impart introductory knowledge about <ul style="list-style-type: none"> • Biology of the cell- the basic building UNITS of an organism, • Human physiology- a glimpse at the orchestrated functioning of organ systems and • Basic principles of genetics as seen in nature and diversity in life forms to the students.
Course Outcomes	At the conclusion of the course; <ul style="list-style-type: none"> • Students will describe the structures and biological functions of cells and their components such as DNA, RNA, lipids, carbohydrates and protein. • Students will explain the metabolic pathways cells use to obtain and transform energy during the life cycle. • Students will explain the molecular basis of inheritance and cell division.

UNIT-I

Introductory Biology: Definition of life, characteristics of life, differences between animals and plants, principal divisions in biology and importance of biology.

Cell Biology: Definition of cell, Cell as a basic UNIT of living systems, fundamental cell types (PPLO's, bacteria, eukaryotic microbes, plant and animal cells), difference between prokaryotic and eukaryotic cells, Structure and function of cell organelles, ultrastructure of cell membrane, cytosol, Golgi bodies, endoplasmic reticulum (rough and smooth), ribosomes, cytoskeletal structures (actin, microtubules etc.), Mitochondria, lysosomes, nucleus.

Tissue: Definition, classification, microscopic structure & function of epithelial, muscular, connective & nervous tissue.

UNIT-II

Cell Cycle: Cell division; mitosis, meiosis, stages of cell cycle, Cell Senescence and Death (Apoptosis and necrosis), Cell Differentiation in Animals: Totipotent, multipotent, pluripotent cells.

Physiology: Introduction to various systems in human body-Digestive system, respiratory system, circulatory system, endocrine system, reproductive system.

UNIT-III

Basics of genetics: Mendel's work and experiments, gene: bearer of heredity character, chemical basis of heredity. Chromosome structure, structural aberrations and human karyotype.

Evolution: Origin of life, theories of evolution, evidences of evolution from plant and animal kingdom, modern concept in Evolution and concept of speciation.

UNIT-IV

Biodiversity: Variety of living organisms, Systematic, need, history and types of classifications (artificial, natural, phylogenetic), biosystematics; binomial nomenclature; Two kingdom system, Five kingdom system, their merits and demerits.

Text and Reference Books

S. No	Name	Author(S)	Publisher
1.	Cell Biology, Genetics, Molecular Biology, Evolution & Ecology	PS Verma & VK Aggarwal	S.Chand
2	Fundamentals of genetics	Peter J Russell	
3	Fundamentals of genetics	G.S Miglani	
4.	Cytogenetics, Molecular Biology and Evolution	KN Bhatia	Trueman Publishers
5.	Cell Biology and Genetics	KN Bhatia and Neelam Dhand	

General Microbiology

Course Code	MLS109
Course Title	General Microbiology
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	To introduce basic principles and core concepts of microbiology, including the evolution and diversity of microbes; cell structure and function; metabolism; information flow and the role of microbes.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will understand the theory, principle, working, maintenance and precautions of different equipment and microbial techniques. • Students will demonstrate theory and practical skills in microscopy and their handling techniques and staining procedures • Students will comprehend aseptic techniques and be able to perform routine culture handling tasks safely and effectively

UNIT-I

Introduction: Nomenclature & Classification of micro-organisms, Historical review (Contributions of E. Jenner, L. Pasteur, Robert Koch and postulates, Anton van Leeuwenhoek, Alexander Fleming) and scope of microbiology, Role of medical microbiology in diagnosis and control of infections.

UNIT-II

Microscopy: Study of compound microscope – magnification, numerical aperture, resolution and components of microscope. Dark ground illumination, care of microscope. Bright Field Microscope, Dark Field Microscope, Phase Contrast Microscope, Fluorescence Microscope, Transmission Electron Microscope, Scanning Electron Microscope

Safety measures in Medical Microbiology: Introduction- Care and handling of glassware, cleaning of glassware

UNIT-III

Sterilization and disinfection methods: Classification of sterilization and Disinfection, Different methods of sterilization: Heat, radiation, filtration, chemical methods, antiseptics and asepsis. Pasteurization and serum inspirator

Staining methods: Types of stains; acidophilic, basophilic and neutral Staining procedures: principle, procedures, uses, advantages and disadvantages of simple staining, Gram staining, negative staining, fluorochrome staining, stains for spirochetes and spores.

UNIT-IV

Morphology of bacteria: structure and function of bacterial cell, anatomy of bacterial cell including collection, transport and processing of specimens.

Growth and nutrition: Culture media and culture methods-aerobic and anaerobic, Metabolism of bacteria, growth curve of bacteria, use of culture media in diagnostic bacteriology, Bacterial toxins, Anti-microbial agents, Antimicrobial susceptibility tests, Quality control and safety.

Text and Reference Books

S. No	Name	Author(S)	Publisher
1.	Practical Medical Microbiology Volume 1 and Volume 2	Mackie & MacCartney	Churchill Living Stone
2	Text book of Microbiology	Ananthanereyan and Paniker	Universities Press
3	Medical Microbiology	Paniker & Satish Gupte	Universities Press
4	Text book of Microbiology	Michael J. Pelczar, JR. E.C.S Chan & Noel R. Krieg	Tata McGraw Hill
5.	Text book of Microbiology	D.R Arora & B. Arora	CBS Publishers

Hematology-I

Course Code	MLS113
Course Title	Hematology-I
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	To study the components, characteristics and functions of human blood and to identify principles and procedures of routine hematological tests including sources of error and clinical significance of results.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to apply principles of protection, quality declaration and excellence regulation in Hematology. • Students will be able to understand the value and clinical significance of routine hematological tests. • Students will be able to accomplish and describe ideologies and procedures of hematopoiesis and staining techniques.

UNIT-I

Introduction to hematology: Importance, laboratory organization and equipment used, safety measurements in hematology laboratory.

UNIT-II

Hematopoiesis: Erythropoiesis, leucopoiesis, thrombopoiesis, Stem cells, formed elements and their functions, Anticoagulants used in various haematological studies.

UNIT-III

Staining techniques in hematology: Principle, procedure and preparation of following stains:

- Giemsa stain
- Leishman stain
- Wright's stain
- Field's stain

UNIT-IV

Routine hematological tests: Principle, procedures, normal values and clinical significance:

- Determination of Haemoglobin by Sahli's method and Cyanmethemoglobin method
- Determination of Haematocrit
- Enumeration of RBC, WBC & Platelets
- Absolute Eosinophil count
- Reticulocyte count
- Calculation of Red cell Indices
- Preparation of blood film
- Staining of blood film for morphology of red cells and
- Differential count

Communication Skills-I

Course Code	ENG121
Course Title	Communication skills-I
Type of course	Theory
L T P	2:0:0
Credits	2
Course prerequisite	+2 in any stream
Course Objective (CO)	<ol style="list-style-type: none"> 1. Equip the learner with proficiency in reading comprehension. 2. Enable the learner with improved writing skills and command over official/ corporate communication. 3. Enhance the learners' range of vocabulary and knowledge of the essentials of grammar.
Course Outcomes	<p>At the conclusion of the course;</p> <ul style="list-style-type: none"> • Students will have fairly good proficiency in reading comprehension. • Students will have enhanced writing skills and have command in official/corporate communication. • Students will develop confidence in making presentation; oral or documentary.

UNIT-I

Basics of Communication Skills: Communication, Process of Communication, Types of Communication-Verbal and Non-verbal communication, Channels of Communication- Upward, Downward, Horizontal, Barriers to Communication, Role of Communication in society.

UNIT-II

Listening Skills: Listening Process, Hearing and Listening, Types of Listening, Effective Listening, Barriers of Effective Listening, Note Taking **Reading Skills:** Purpose of reading, Process of reading, reading skills Models and strategies, scanning, skimming, SQ3R, Approaches of Reading, Comprehension passages for practice.

UNIT III

Writing Skills: Purpose of writing, Effective writing, Types of writing, Business Correspondence, Precise writing, Memo writing, minutes of meeting.

UNIT-IV

Speaking Skills: Speech process, Skills of effective speaking, Role of audience, Feedback Skill, Oral Presentation.

Text and Reference Books:

Human Anatomy & Physiology Practical

Course Code	MLS103
Course Title	Human Anatomy & Physiology Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	Students will be able to learn the basic terminology of anatomy, architecture and functional details of cells, tissues, organs and organ systems.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to explain the anatomy, physiology and functions of various organs mentioned in chapters. • Students will understand the homeostatic mechanisms and altered physiology of digestive system. • Students will apply concepts and knowledge of terminology related to the cardiovascular, digestive system and structure and function of blood and lymphatic system

LIST OF PRACTICALS

1. Study of following body systems showing all parts through charts and models:

- Musculo-skeletal system: bones and joints
- Cardiovascular system: heart, artery and vein, blood circulation
- Respiratory system: trachea and lungs
- Digestive system: parts of alimentary canal and digestive glands

2. Study of histology of following from permanent slides:

- a. Types of epithelial tissue
- b. Skeletal, smooth & cardiac muscle (TS & LS)
- c. Compact bone (TS & LS)
- d. Cartilages (hyalin, elastic and fibro-cartilage)
- e. Artery & vein (TS)
- f. Spleen (TS)
- g. Oesophagus (TS)
- h. Stomach (TS)
- i. Deudenum (TS)
- j. Liver (TS)
- k. Pancreas (TS)

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.

Fundamentals of Biology Practical

Course Code	MLS107
Course Title	Fundamentals of Biology Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	To introduce basic principles and core concepts of biology, including the evolution and diversity of living organisms; cell structure and function.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Student will be able to understand the basics cycles of cellular division like mitosis and meiosis. • Students will be able to understand and interpret micrographs of different cell structures and evolution through charts and models. • Students will be able to identify and recognize the structure of cellular organelles by Staining techniques.

LIST OF PRACTICALS

1. Study of Mitosis and Meiosis through animal cells
2. Study of Epithelial, Muscular, Neural and mammalian blood cells through permanent or temporary slides and their reasons for identification
3. Study of micrographs of different cell structures (dry lab)
4. Staining and visualization of mitochondria by Janus green stain.
5. Study of specimens of following arthropods:
 - 3.1. *Anopheles*,
 - 3.2. *Culex*,
 - 3.3. *Aedes*,
 - 3.4. *Pediculus*,
 - 3.5. *Musca*
6. Study of evolution through charts and models.
7. To demonstration process of osmosis.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos.

General Microbiology Practical

Course Code	MLS111
Course Title	General Microbiology Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	<ul style="list-style-type: none"> • To impart skills in essential microbiological techniques and to demonstrate the principle and working of various equipment used in microbiology • To provide hands on training to perform various microbiological tests in medical microbiology laboratory.
Course Outcomes	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students will understand the basic safe code of practice for a Microbiology laboratory • Students can prepare the cleaning agents & familiarize with the technique for cleaning & sterilization • Students will understand the theory, principle, working, maintenance and precautions of different equipments and microbial techniques

LIST OF PRACTICALS

1. To demonstrate safety measures for a Microbiology laboratory.
2. To prepare cleaning agents & to study the technique for cleaning & sterilization.
3. To demonstrate the theory, principle, working, maintenance and precautions of Compound Microscope, Autoclave, Laminar Air Flow, Incubator.
4. Preparation of basic media for different microbial organisms
5. Isolation and enumeration of bacteria by spread plate method.
6. To obtain isolated pure colonies using different streaking formats.
7. To prepare agar slants and agar deeps for culturing microorganisms.
8. Isolation of bacteria by pour plate method.
9. To prepare a bacterial smear and perform simple staining.
10. To perform negative staining of bacteria.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Hematology - I Practical

Course Code	MLS115
Course Title	Hematology - I Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	To provide hands on training to perform various hematological procedures used as diagnostic tools for screening of hematological abnormalities.
Course Outcomes	At the conclusion of the course; <ul style="list-style-type: none"> • Students will become familiar with the performance of routine and specialized laboratory techniques for the evaluation of blood cells. • Students will be able to perform and elucidate principles and procedures of tests and characterize the errors that may occur during manual testing .

LIST OF PRACTICALS

1. Study of laboratory equipments pertaining to hematological investigations.
2. Venipuncture and collection of blood samples.
3. Preparation of blood smear and staining using Geimsa stain and Leishmann stain.
4. Identify blood cells by using microscope.
5. Preparation of diluting fluids for RBC and WBC counts.
6. Demonstrate the Principles and working of hemocytometry
7. RBC count
8. WBC count
9. Differential Leucocyte count
10. Platelet count
11. Calculation of Red Cell Indices
12. Estimation of Haemoglobin
13. Determination of ESR

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Communication Skills-I Lab

Course Code	ENG123
Course Title	Communication Skills-I Lab
Type of Course	HS
L T P	0:0:2
Credits	1
Course pre-requisite	+2 in any stream
Course Objectives	<ol style="list-style-type: none"> 1. Equip the learner with proficiency in reading comprehension. 2. Enable the learner with improved writing skills and command over official/ corporate communication. 3. Enhance the learners' range of vocabulary and knowledge of the essentials of grammar.
Course Outcomes	<p>At the conclusion of the course;</p> <ul style="list-style-type: none"> • Students will have fairly good proficiency in reading comprehension. • Students will have enhanced writing skills and have command in official/corporate communication.

UNIT-I

Speaking and Discussion Skills: Oral Presentation, Planning and organizing content for presentation, Use of audio /Visual Aids, Making Slides for presentation, Group Discussion, Debate, Extempore speaking, Interview Skills, Mock interview, Mock Dialogues (Pair Speaking), Cue Card Speaking, Meeting/ Conferences.

UNIT-II

Listening Skills: Listening to any recoded material and asking oral/written questions for listening comprehension.

Reading Skills: Active Reading of passages for Reading comprehensions, paraphrase, Summary writing.

UNIT-III

Writing Skills: Guidelines of effective writing, Paragraph Writing, Email Writing.

UNIT-IV

Grammar and Vocabulary:

Parts of Speech, Tenses, GRE words (List of 50 Words).

Text and Reference Books:

Sr No	Author(s)	Title	Publisher
1.	Bhupender Kour	Effectual Communication Skills	S.K. Kataria and Sons
2.	R. Datta Roy and K.K. Dheer	Communications Skills	Vishal Publishing Company
3	The Essence of Effective Communication	Ludlow and Panton	Prentice Hall of India
4	Essentials of Business Communication	Pal and Korlahalli	S. Chand and Sons. New Delhi

Biochemistry I

Course Code	MLS102
Course Title	Biochemistry I
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	<ul style="list-style-type: none"> • The course intends to provide students with sufficient knowledge of structure of biomolecules and basis to understand their functions at the level of cells and body • Introduce the student to basic concepts of nutrition and its importance in biological systems.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the structure and functions biomolecules. • Students will apply this knowledge to solve the complexity of macromolecules. • Students will be able to analyze the influence and role of structure in reactivity of biomolecules.

UNIT-I

Cellular and Molecular Basis of Life: Introduction to the Chemistry of the living beings, Elementary knowledge of Cell and cell organelles: structure and function, cellular compartmentalization.

UNIT-II

Carbohydrates: Structural aspects; Introduction & Occurrence, Classification of Mono-, Di- and Polysaccharides, Reducing & Non-reducing Sugars, properties of monosaccharides (Osazone formation, Pyranose & Furanose forms, mutarotation) Inter-conversion of monosaccharides and functions of carbohydrates.

Lipids: Structural aspects; General introduction, Classification & Structure of Simple & Compound lipids, Properties of Lipid aggregates (elementary idea), Biological membranes, Membrane protein – structural aspects, functions of lipids, Lipoproteins: structure, types and functions.

UNIT-III

Proteins: Structural aspects – General introduction, Classification & General characteristics, Structure of Primary, Secondary, Tertiary & Quaternary proteins, Classification of Amino acids and functions of proteins

Nucleic acid: Structural aspects – Components of DNA and RNA, Nucleosides & Nucleotides (introduction, structure & bonding), Double helical structure of DNA (Watson-Crick model), various forms of DNA, functions of DNA and RNA.

UNIT-IV

Macro and micro nutrients: Vitamins & Minerals.

Vitamins: Fat soluble vitamins and water soluble vitamins; sources, Biochemical role, RDA and Deficiency manifestations.

Minerals: Calcium, phosphorous, iron, copper, zinc, magnesium, manganese, iodine.

Basics of Medical Lab Technology

Course Code	MLS106
Course Title	Basics of Medical Lab Technology
Type of course	Theory
L T P	3 1 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	<ul style="list-style-type: none"> • To understand the role of healthcare professional. • To impart basic knowledge of laboratory principles, procedures and techniques.
Course Outcomes (CO)	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students are exposed to basic laboratory techniques on biological specimens and comply with safety regulations and universal precautions. • Students will achieve precautionary and corrective maintenance of apparatus and instruments or refer to appropriate source for repairs. • Students will be able to develop specialized and interpersonal communication skills with patients, laboratory staffs, other health care authorities, and the community.

UNIT-I

General overview: classification and organization of medical laboratories, Role of medical laboratory services, lab technologists, lab rules, professional ethics and professional code of conduct.

Laboratory Safety: General principles, laboratory hazards and factors contributing to laboratory hazards, universal safety measures and First aid in the laboratory.

Laboratory ware: Types, use and calibration of following; pipettes, burettes, flasks, beakers, cylinders, test tubes, petri dishes etc. plasticware: PVC, polycarbonate, Teflon; composition, properties, varieties, grades of glass wares. Advantages and disadvantages of various disposable lab ware.

Cleaning of laboratory wares: Preparation of cleaning solutions, general and specific cleaning procedures, care of laboratory wares and utensils, grades of chemicals, storage and handling of chemicals and reagents.

UNIT-II

Equipments: Introduction to common equipments used in laboratory: Principles, operation, use, care and maintenance of pH meter, centrifuge, hot air oven, water bath and colorimeter, laminar air flow and autoclave, Incubators, Quebec colony counter

UNIT-III

Solution preparation: UNITS of weight and volume, methods of expressing concentration of solution: Molarity, Normality, Molality, percent solution, saturated solutions and standard solutions.

Buffers: Buffer solutions and their storage, preparation of commonly used laboratory buffers.

Distillation: preparation and use of distilled water, storage and type of distillation units.

UNIT-IV

Concept of pH: dissociation of water, ionic product, pH concept, Henderson Hassel balch equation, pH measurements, Buffer solutions and buffering capacity

Electrolyte Balance: types of body fluids, distribution of body water and electrolytes, normal water balance, normal electrolyte balance, regulatory mechanism, pathological variations of water and electrolytes and water intoxication.

Medical Parasitology

Course Code	MLS110
Course Title	Medical Parasitology
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	The course is intended to impart knowledge related to geographical distribution, morphology, life history and pathogenesis of medically important parasites. Students will also learn the techniques pertaining to their diagnosis.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • The students will acquire basic knowledge of parasites and its types. • Students will be able to apply this knowledge to understand the pathogenicity and diagnosis of protozoan parasite infection. • Students will learn about culture, collection, handling, transportation and examination of clinical samples.

UNIT-I

Introduction: General characteristics of parasites, types of parasites, hosts of parasites, host-parasite relationship, Routes of transmission, organs and tissues affected by parasites, host response to parasite infections, Role of vectors in transmission of parasites

UNIT II

Protozoan parasites: Introduction and classification of protozoa, Morphology, life cycle and laboratory diagnosis of *Entamoeba histolytica*, *Giardia lamblia*, *Trichomonas vaginalis*

Intracellular protozoan parasites: Morphology, life cycle and laboratory diagnosis of *Trypanosoma brucei gambiense*, *Leishmania donovani*.

Malaria parasite: Morphology, life cycle and laboratory diagnosis of *Plasmodium vivax*, *P. ovale*, *P. malariae*, *P. falciparum*

UNIT II

Cestodes: General characteristics and classification of cestodes, morphology, life cycle and laboratory diagnosis of *Taenia saginata*, *Taenia solium*,

Trematodes: General characteristics and classification of trematodes, morphology, life cycle and laboratory diagnosis of *Schistosoma haematobium* and *Fasciola hepatica*

UNIT III

Nematodes- I: General characteristics and classification of nematodes, morphology, life cycle and laboratory diagnosis of *Ascaris lumbricoides* and *Ancylostoma duodenale*

Nematodes-II: Morphology, life cycle and laboratory diagnosis of *Enterobius vermicularis*, *Wuchereria bancrofti*

UNIT IV

Diagnosis of parasitic infections: Gross and microscopic examination of stool samples, sedimentation and floatation methods, Blood examination.

Hematology – II

Course Code	MLS114
Course Title	Hematology – II
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	This subject aims to enable the students to carry out routine clinical laboratory investigation (blood, urine etc). He/she should be able to provide technical help for sophisticated hematological techniques with adequate knowledge of various principles.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to define, describe, and evaluate the advanced principles of hematology as it relates to white blood cells and platelets development and maturation. • Students will be able to compare and contrast the requirements mandated by the blood coagulation test, hemostasis techniques and other safety protocols applicable to the hematology laboratory. • Students will be able to compare and contrast the primary and secondary disorders of hemostasis and the laboratory tests used to identify them.

UNIT-I

Hematopoiesis: Overview, Regulation of erythrocyte production, distribution morphology, kinetics of haemoglobin synthesis, Haemoglobin: structure, function, normal and abnormal haemoglobin pigments and their measurement, Leucopoiesis: WBC production, distribution, morphology, kinetics, Thromopoiesis: Platelet Production, distribution, morphology, kinetics.

UNIT-II

Blood Coagulation: Theories of blood coagulation, Normal haemostatic mechanism, Classification of coagulation factors, Physiological properties of various coagulation factors, Preparation of various coagulation reagents such as Tissue Thromboplastin, Cephalin, Kaolin and Thrombin

Haemostasis: Investigation of haemostatic mechanism: BT, CT, whole blood coagulation time test, PT, PTT, Platelet function tests, Screening coagulation tests such as Bleeding and clotting Time, Hess test, prothrombin time (PT) and Activated Partial Thromboplastin time (APTT).

UNIT-III

Hematological Disorders: Anemias - Classification and approach to diagnosis and diagnostic tests, Polycythemias, Neoplastic and non-neoplastic disorders of WBC, Classification and lab diagnosis of leukemias, chronic myeloproliferative disorders and other malignant disorders of the haemopoietic system.

UNIT-IV

Quantitative and qualitative abnormalities and inherited and acquired disorders of platelets

Automation: Introduction to automation in hematology, Principle, advantages, cautions and types of autoanalysers.

Quality assurance and quality control

Human Anatomy & Physiology-II

Course Code	MLS118
Course Title	Human Anatomy & Physiology-II
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course objective	Students will learn the concepts of anatomical structures in relationship to their physiological functions. They will also learn the integration and coordination of body functions and their dependence on endocrine and nervous system to regulate the physiological activities.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the homeostatic mechanisms and altered physiology of Nervous system. • Students will be able to understand the homeostatic mechanisms and altered physiology of endocrine and urinary system • Students will be able to understand the homeostatic mechanisms and altered physiology of reproductive system

UNIT-I

Urinary System: Parts, Gross structure of kidney, ureters, urinary bladder and urethra, structure of nephron, measurement and regulation of GFR and mechanism of urine formation.

UNIT-II

Reproductive System: Parts of the system, gross structure of both male and female reproductive organs, reproductive cycle in female including menstrual cycle, pregnancy, parturition, lactation, male sex hormones and spermatogenesis and Basis of contraception.

UNIT-III

Nervous System: Structure of neuroglia and neurons, nerve impulse, myelinated and non-myelinated nerve parts and classification:

- CNS – Structure of Brain and spinal cord and their functions.
- PNS - Cranial nerves and spinal nerves
- ANS - Sympathetic and Parasympathetic

Brief account of resting membrane potential, action potential and conduction of nerve impulse across synapse and neuromuscular junction and role of neurotransmitters

Sensory Organs: Structure and functions of Skin, Eye, Nose, Ear and Tongue (Auditory and Olfactory apparatus)

UNIT-IV

Endocrine System: Gross structure of pituitary, thyroid, parathyroid, pancreas and adrenal glands, Names of endocrine glands - their secretions and functions, Brief account of endocrine disorders.

Communication Skills-II

Course Code	ENG114
Course Title	Communication Skills-II
Type of Course	Theory
LTP	2:0:0
Credits	2
Course pre-requisite	+2 in any stream
Course Objectives (CO)	Objectives of the course is to: 1. Equip the learner with proficiency in reading comprehension. 2. Enable the learner with improved writing skills and command over official/ corporate communication. Enhance the learners' range of vocabulary and knowledge of the essentials of grammar.
Course Outcomes	At the conclusion of the course the learner will be able to: 1. Have fairly good proficiency in reading comprehension. 2. Have enhanced writing skills and have command in official/ corporate communication. 3. Develop confidence in making presentation; oral or documentary.

UNIT-I

Grammar: Parts of Speech, Use of appropriate tense, Voice , Reported Speech, Sentence Structure; Simple, Compound, Complex, Vocabulary-One word substitution.

UNIT-II

Writing Skills: Application for employment , Resume Writing ,Paragraph Writing Construction-Kinds of Paragraphs, Preparing of Matter for meeting : Notice, agenda, Conference

UNIT-III

Speaking Skills: Effective oral Presentation, Slide making, Use of audio Visual aids.

UNIT-IV

Oral Communication and its Application:

Group Discussion, Customer Care Relations (PR Skills), Interview Skills (Conducting and appearing for interviews), and Telephone handling manners.

Biochemistry –I Practical

Course Code	MLS104
Course Title	Biochemistry –I Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	To make students familiar with the techniques of qualitative and quantitative analysis of biologically important compounds such as sugars, amino acids, proteins and lipids etc.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the basic laboratory practices in biochemistry • Students will apply this knowledge for the preparation of common anticoagulants used in laboratory • Students will be able to evaluate the qualitative analysis of biomolecules. • Students will be able to analyze the processes of investigation and hypothesis testing.

LIST OF PRACTICALS

1. Qualitative analysis of carbohydrates (atleast one test for each aldo, keto sugar, reducing sugars and non-reducing sugars)
 - Molisch Test
 - Fehling Test
 - Benedict Test
 - Seliwanoff Test
 - Barfoed Test
 - Iodine test
2. Qualitative analysis of aminoacids and proteins:
 - Biuret Test
 - Millon`s Test
 - Ninhydrin Test
 - Xanthoprotic Tests
3. General tests for lipids:
 - Solubility Test
 - Emulsification Test
 - Sudan-III Test
4. Preparation of common anticoagulants used in laboratory.
5. Verification of Lambert-Beer`s Law Spectrophotometrically
6. Quantitative estimation of sugars by
 - Dubois method
 - Anthrone method
 - DNS method
7. Quantitative estimation of proteins by
 - Biuret method
 - Folin- lowry`s method

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.

Basics of Medical Lab Technology Practical

Course Code	MLS108
Course Title	Basics of Medical Lab Technology Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	To impart hands on practice on general laboratory procedures and techniques.
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to recognize factors that affect laboratory procedures and results. • Students will be able to perform preventive and corrective maintenance of equipment and instruments or refer to appropriate source for repairs. • Students will learn the calibration of volumetric glasswares. • Students will be able to comply with safety regulations and universal precautions.

LIST OF PRACTICALS

1. Measurement of liquids and weighing of solids
2. Calibration of volumetric glassware; pipettes, flasks, burettes etc.
3. To demonstrate the cleaning of lab wares and laboratory utensils
 - Preparation of cleaning fluids (chromic acid)
4. Preparation of standard solutions (w/v, v/v, molar, normal and percent solutions)
 - 0.1M NaOH
 - 0.1N HCl
 - 10% NaCl
5. To make suitable dilutions by diluting the standard stock solution.
6. Measurement of pH and preparation of buffer solution (any one buffer acetate or phosphate buffer)
7. To demonstrate the principle, operation, use, care and maintenance of following lab equipments:
 - pH meter
 - Centrifuge
 - Water bath
 - Hot air oven
8. To demonstrate the preparation of distilled and de-ionised water

Note: *Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos.*

Medical Parasitology Practical

Course Code	MLS112
Course Title	Medical Parasitology Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	The students will learn techniques related to collection, transportation and preservation and processing of specimens for routine parasitological investigations.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the basic laboratory practices in Parasitology • Students will be able to apply the knowledge for the isolation of parasites by various concentration methods • Students will be able to perform the examination of blood and stool samples for diagnosis of disease.

LIST OF PRACTICALS

1. Routine stool examination for detection of intestinal parasites: Preparation of slide; Saline and Iodine mount
2. Concentration methods: simple flotation, Lane's direct centrifugal flotation. Zinc sulphate centrifugation
3. Sedimentation method: simple sedimentation and Formal ether concentration method
4. Study of parasite life stages (eggs, cysts, adult worms, larvae) by chart and permanent slides
5. Detection of different stages of Plasmodium species in permanent slides of blood sample.
6. Detection of malaria parasites in peripheral blood smear by Giemsa staining and Leishman's stain
7. Identification of adult worms from Model/specimens/slides: (morphology, stages of life cycle, pathogenicity and clinical features)
 - a. *T. solium* and *T. saginata*
 - b. *Ascaris lumbricoides*
 - c. Pinworms

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Hematology – II Practical

Course Code	MLS116
Course Title	Hematology – II Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	To impart hands-on training for identifying blood cell abnormalities for the diagnosis of disease and to provide skills necessary to perform blood cell count and evaluation of blood elements within stated limits of accuracy
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to perform basic steps for drawing a blood specimen by different methods • Students will be able to associate and contrast hematology ethics below standard and abnormal circumstances • Students will be able to perform and elucidate principles and procedures of tests to include causes of error and clinical consequence of results

LIST OF PRACTICALS

1. Basic steps for drawing a blood specimen by vein puncture and Complications of vein puncture.
2. Theory of hemolysis
3. Blood collection by skin puncture (Capillary Blood)
4. Deciding specimen types and selection of - Anticoagulant- EDTA, Citrate, Oxalate, Heparin, sodium fluoride.
5. Preparation of thin, thick, & wet blood films.
6. Packed cell volume
7. Erythrocyte Indices- MCV, MCH, MCHC.
8. Reticulocyte Count.
9. Absolute Eosinophil Count
10. Estimation of serum iron

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Human Anatomy & Physiology-II Practical

Course Code	MLS120
Course Title	Human Anatomy & Physiology-II Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course objective	The concepts related to anatomical details of human organ systems and integration and coordination between them will be demonstrated through charts, models and permanent slides.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the basic components of anatomy & physiology of animals with special reference to human beings. • Students will be able to understand and learn about various tissue systems and organ systems in animals. • Students will be able to explain the gross morphology, structure and functions of various organs of the human body.

LIST OF PRACTICALS

1. Study of following body systems showing all parts through charts and models
2. Excretory system: kidney, ureters and urinary bladder
3. Male reproductive system: Testes and vas deferens
4. Female reproductive system: ovaries, uterus, fallopian tubes
5. Nervous system: parts of brain; cerebellum, cerebrum, Pons and medulla oblongata
6. Study of histology of following tissues and organs from permanent slides:
 - Kidney (LS)
 - T.S of cortex part of kidney
 - T.S of medulla part of kidney
 - T.S of testes
 - T.S of ovaries
 - myelinated and non-myelinated nerve fibres
 - T.S of spinal cord
 - Thyroid gland (TS)
 - Adrenal gland (TS)
 - Pancreas (TS)
7. Study of structure of various sensory organs from charts.
 - Eye
 - Ear
 - Nose

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Communication Skills-II Lab

Course Code	ENG116
Course Title	Communication Skills-II Lab
Type of Course	Practical
L T P	0:0:2
Credits	1
Course pre-requisite	+ 2 with any stream
Course Objectives	Objectives of the course is to: <ol style="list-style-type: none"> 1. Equip the learner with proficiency in reading comprehension. 2. Enable the learner with improved writing skills and command over official/ corporate communication. 3. Enhance the learners' range of vocabulary and knowledge of the essentials of grammar.
Course Outcomes	At the conclusion of the course the learner will be able to: <ol style="list-style-type: none"> 1. Have fairly good proficiency in reading comprehension. 2. Have enhanced writing skills and have command in official/ corporate communication. 3. Develop confidence in making presentation; oral or documentary.

UNIT-I

Grammar

To recognize part of speech of particular word in given sentence, To use appropriate tense, Exercise on-Voice, Reported speech and Sentence Structure, Vocabulary-One word substitution.

UNIT- II

Writing Skills

Job Application, Resume Writing, Paragraph Writing, Preparing of Matter for meeting: Notice, agenda, Conference.

UNIT- III

Speaking Skills: How to deliver an effective power point Presentation, Slide making, Effective use of audio Visual aids,

UNIT-IV

Oral Communication and its Application:

Group Discussion, Mock Interview (Conducting and appearing for interviews), and Role plays. Conducting a successful official meeting.

2	Media and Communication Management	C. S. Rayudu	Himalaya Publishing House, Bombay.
3	Essentials of Business Communication	Rajendra Pal and J. S. Korlahalli	Sultan Chand & Sons, New Delhi

Biochemistry – II

Course Code	MLS201
Course Title	Biochemistry – II
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course objectives	The course aims to provide students with a basic understanding of principles of bioenergetics and enzyme catalysis, metabolism of dietary and endogenous carbohydrate, lipid, and protein and major mechanisms of metabolic control.
Course Outcome	At the conclusion of the course; <ul style="list-style-type: none"> • Students will be able to understand the vital biochemical principles, such as the function of biomolecules and the regulation of biochemical progressions. • Students will be able to apply this knowledge to describe the synthesis of proteins, lipids, nucleic acids, and carbohydrates. • Students will be able to analyze the role of biomolecules in metabolic pathways.

UNIT-I

Principle of intermediary metabolism: catabolism and anabolism, Biological oxidations & electron carriers and general concept of metabolic regulation.

UNIT-II

Carbohydrate metabolism: Digestion and absorption of carbohydrates, major catabolic routes of glucose; glycolysis, TCA, glycogenolysis & HMP shunt pathway, anaerobic breakdown of glucose (alcoholic and lactic acid fermentation), anabolism of carbohydrates; gluconeogenesis and glycogenesis, 8(homeostasis) and metabolic disorders of carbohydrate metabolism

Lipid metabolism: Digestion and absorption of lipids, role of lipoproteins in transportation of lipids, fatty acid oxidation, ketone body formation and ketosis, fatty acid synthesis, metabolism of cholesterol (biosynthesis and degradation), bile acids and their functions, disorders of lipid metabolism.

UNIT-III

Protein Metabolism: Digestion and absorption of proteins, catabolism of amino acids; Deamination, Transamination and Decarboxylation reactions, transport of ammonia and Urea cycle, biosynthesis of amino acids (elementary idea), metabolic disorders of aminoacids and proteins.

Metabolism of nucleic acids: Catabolism and biosynthesis of nucleotides, nucleosides and purine and pyrimidine bases, clinical disorders of purine and pyrimidine metabolism.

UNIT-IV

Enzymes: Nomenclature and classification of enzymes, general properties of enzymes; specificity, mechanism of action (Lock and key & induced fit hypothesis) and factors affecting enzyme action

Enzyme kinetic: Michaelis-Menten equation, significance of K_m , enzyme inhibition and enzyme regulation.

Systematic Bacteriology

Course Code	MLS205
Course Title	Systematic Bacteriology
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course objective (CO)	To impart the knowledge of causative agents, pathogenesis, biochemical assays and lab diagnosis for characterization of pathogenic bacteria.
Course Outcome	At the conclusion of the course; <ul style="list-style-type: none"> • Students will be able to understand the characteristics of bacterial cells, cell organelles, cell wall composition and various appendages like capsules, flagella or pili. • Students will be able to differentiate a large number of common bacteria by their salient characteristics & classify bacteria into groups. • Students will apply the knowledge to identify diseases, its diagnosis and predict the treatment plan.

UNIT-I

Pathogenic Gram-positive cocci: Morphology, culture characteristics, biochemical features and laboratory diagnosis of *Staphylococcus aureus*, *Streptococcus pyogenes* and *Streptococcus pneumoniae*.

Pathogenic Gram-negative cocci: Morphology, culture characteristics, biochemical features and laboratory diagnosis of *Neisseria gonorrhoeae* and *Neisseria meningitidis*

UNIT-II

Pathogenic Gram-negative bacilli-I: Morphology, culture characteristics, biochemical features and laboratory diagnosis of *Hemophilus influenzae*, Pathogenic *E. coli* and *Salmonella typhi*

Pathogenic Gram-negative bacilli-II: Morphology, culture characteristics, biochemical features and laboratory diagnosis of *Helicobacter pylori*, *Shigella dysenteriae*

UNIT-III

Pathogenic Gram-positive bacilli-I: Morphology, culture characteristics, biochemical features and laboratory diagnosis of *Corynebacterium diphtheriae*, *Clostridium tetani* and *Clostridium botulinum*.

Pathogenic Gram-positive bacilli-II: Morphology, culture characteristics, biochemical features and laboratory diagnosis of *Listeria monocytogenes* and *Bacillus anthracis*

UNIT-IV

Other pathogenic bacteria: Morphology, culture & biochemical features and laboratory diagnosis of *Mycobacterium tuberculosis*, *Vibrio cholerae*.

Mycoplasmas and rickettsias: Morphology, culture & biochemical features and laboratory diagnosis of *Mycoplasma pneumoniae* and *Chlamydia trachomatis*

Basics of Biochemical & Biophysical Techniques

Course Code	MLS209
Course Title	Basics of Biochemical & Biophysical Techniques
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course Objective (CO)	<ul style="list-style-type: none"> • To provide insights into the complex biochemical and biophysical principles and procedures used for extraction, separation, purification, estimation and characterization of compounds of clinical importance in analytical biochemistry. • To impart knowledge about radio diagnostic techniques.
Course outcomes	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students will be able to monitor quality control within predetermined limits. • Students will accomplish precautionary and counteractive care of equipment and apparatuses suitable source for maintenance. • Students will demonstrate the use of different techniques like spectrophotometry, flame photometry, AAS, centrifugation, radioisotopes techniques and electrophoresis etc.

UNIT-I

Spectrophotometry: Introduction, theory, principle and applications of spectrophotometry, applications and limitations of Lambert Beer's law, types (single and double beam) and operational use of Spectrophotometers.

AAS: Introduction to principle, instrumentation and applications of atomic absorption spectrophotometers.

UNIT-II

Colorimetry: Theory, principle and applications of photo colorimeter, Introduction to optical filters, operational use and limitations of colorimeters.

Flame photometry: Principle, instrumentation and applications of flame photometers in clinical sciences.

UNIT-III

Chromatography: Basic Principle, theory, modes and types of chromatographic techniques, Principle, procedure and applications of paper chromatography, TLC, column chromatography (LPLC & HPLC), ion exchange chromatography, Gas chromatography and gel exclusion chromatography.

Centrifugation: Basic principles, theory and applications of preparative and analytical centrifugation, rotor types, sedimentation co-efficient, care and maintenance of rotors.

UNIT-IV

Radioisotopic Techniques: Basic concepts of radioisotopy- decay constant, decay series, theory and applications of Geiger-Muller tube counter, solid and liquid scintillation counters, primary and secondary fluors, safety rules for radioisotopic studies, radioisotopes used in medicine.

Electrophoresis: Basic principles, theory and application of native, SDS-PAGE and agarose gel

electrophoresis, Introduction to IEF (Iso-electric focusing) 2-D gel electrophoresis and its applications in diagnosis.

Environmental Science

Course Code	EVS001
Course Title	Environmental Science
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course objective	To connect and sensitize the students towards the environment and prevailing environmental issues (natural, physical, social and cultural).
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will critically examine all sides of environmental issues and apply understanding from disciplines such as history, economics, psychology, law, literature, politics, sociology, philosophy, and religion to create informed opinions about how to interact with the environment on both a personal and a social level. • Students will be able to suggest ways for hygiene, reduce, reuse, recycle and takes care of different living beings (plants, animals, and the elderly, differently abled people), resources (food, water, and public property).

UNIT I

Introduction: Definition and scope and importance of multidisciplinary nature of environment. Need for public awareness.

Natural Resources: Natural Resources and associated problems, use and over exploitation, case studies of forest resources and water resources.

Ecosystems: Concept of Ecosystem, Structure, interrelationship, producers, consumers and decomposers, ecological pyramids-biodiversity and importance. Hot spots of biodiversity

UNIT II

Environmental Pollution: Definition, Causes, effects and control measures of air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measure of urban and industrial wastes. Role of an individual in prevention of pollution, Pollution case studies, Disaster Management: Floods, earthquake, cyclone and landslides.

UNIT III

Social Issues and the Environment: From Unsustainable to Sustainable development, Urban problems related to energy, Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Case studies. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of pollution) Act. Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation Public awareness.

UNIT IV

Human Population and the Environment: Population growth, variation among nations. Population explosion –Family Welfare Programme. Environment and human health, Human Rights, Value Education,

HIV/AIDS. Women and child Welfare. Role of Information Technology in Environment and human health.

Gender Equity

Course Code	SSC001
Course Title	Gender Equity
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	AECC
Course objective	<ol style="list-style-type: none"> 1. The students will be able to acquire knowledge and understanding of theory and concepts related to gender and gender relations. 2. The students will be able to critically reflect how gender is a development issue.
Course Outcome	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • The students will analyse the evolution of thinking and approaches around gender and development.

UNIT I

Concept of sex and gender

Gender attributes and questions of identity.

UNIT II

Empowerment- concept and meaning.

Definition of feminism, feminist and women movements in U.S.A, U.K., France and India

UNIT III

Women development and development organizations.

Impact of development on gender.

UNIT IV

Policies and current debates on women rights.

Role of UN in establishing gender equality.

Violence against women and need for reforms.

Biomedical Waste Management

Course Code	MLS213
Course Title	Biomedical Waste Management
Type of course	Theory
L T P	2 0 0
Credits	2
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course objective	To sensitize the students towards the management of biomedical waste
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to define & classify Biomedical waste. • Students will learn about segregation, collection & transportation of Biomedical Waste. • Students will be able to manage different types of Biomedical Waste. • Students will be aware about modern technologies used in Handling & Management of biomedical waste.

UNIT I

Definition of Biomedical Waste, Types of waste generated from Health Care Facility
Waste minimization

UNIT II

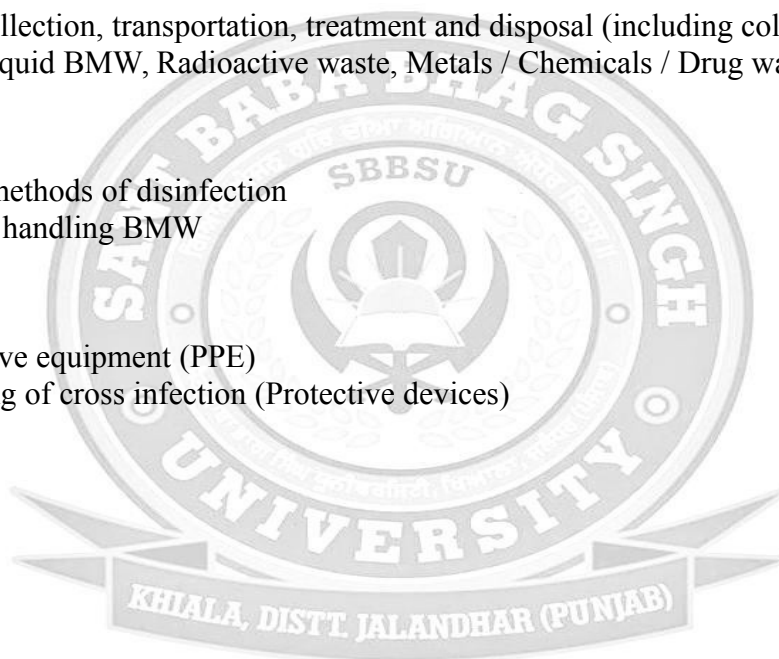

BMW – Segregation, collection, transportation, treatment and disposal (including color coding)
BMW Classification: Liquid BMW, Radioactive waste, Metals / Chemicals / Drug waste

UNIT III

BMW Management & methods of disinfection
Modern Technology for handling BMW

UNIT IV

Use of Personal protective equipment (PPE)
Monitoring & controlling of cross infection (Protective devices)

First Aid

Course Code	MLS215
Course Title	First Aid
Type of course	Theory
L T P	2 0 0
Credits	2
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course objective	To aware students regarding basic first aid techniques
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to learn about First-Aid for Respiratory & Cardiac Conditions. • Students will be familiar about wounds & injuries & their Management & dressings. • Students will be able be familiar about First Aid for Fractures and Dislocation.

UNIT I

First aid: Aims and objectives of first aid
 Basic first aid techniques on Respiratory system & breathing
 Cardiac condition, blood circulation & Shock

UNIT- II

Wounds & injuries
 Dressing and bandages
 Fractures & dislocation of the bone & joints.
 Neurological conditions & unconsciousness

UNIT- III

Abnormality of the gastrointestinal tract & food poisoning
 Electric shock; burns, hemorrhage.

UNIT- IV

Drug toxicity & poisoning, Bites & stings, Foreign body in ENT & Skin

Biochemistry – II Practical

Course Code	MLS203
Course Title	Biochemistry – II Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course objective	To provide hands on training on routine biochemical estimations including enzyme activity measurements carried out in medical laboratory.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will understand the basic laboratory practices in biochemistry • Students will apply this knowledge to quantify various biomolecules • Students will be able to evaluate the laboratory samples for clinical diagnosis • Students will be able to correlate the laboratory test results with common diseases or conditions.

LIST OF PRACTICALS

1. Estimation of blood Glucose by
 - Folin Wu method
 - Glucose oxidase method.
2. Determination of Total serum proteins.
3. Determination of Uric acid in serum or plasma
4. Determination of Urea in serum or plasma
5. Determination of total Cholesterol in serum or plasma
6. Determination of enzyme activity of salivary amylase or acid phosphatase
7. To study effect of pH on enzyme activity
8. To study effect of temperature on enzyme activity

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Systematic Bacteriology Practical

Course Code	MLS207
Course Title	Systematic Bacteriology Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course objective	To provide hands on training on techniques related to characterization and lab diagnosis of medically important bacteria.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the basic laboratory practices in the field of bacteriology. • Students will apply this knowledge to isolate the pathogens from different types of samples such as blood, urine, Sputum and Pus. • Students will be able to perform antibiotic sensitivity test and other serological test for the detection of pathogen . • Students will be able to evaluate the laboratory results to clinical diagnosis and analyze the test results with common diseases or conditions.

LIST OF PRACTICALS

1. To perform Gram staining of different bacterial cultures
2. To perform Ziehl-Neelsen staining of bacteria
3. To perform Alberts staining of bacteria
4. Processing of blood sample for culture and identification of pathogen.
5. Processing of urine sample for culture and identification of pathogen.
6. Processing of Sputum sample for culture and identification of pathogen
7. Processing of Pus sample for culture and identification of pathogen
8. To perform Indole production, Methyl red, Voges-Proskauer and citrate utilization tests for biochemical characterization of bacteria.
9. To perform urease, catalase and oxidase tests for biochemical characterization of bacteria.
10. To perform motility test of bacteria by hanging drop preparation
11. Antibiotic sensitivity testing.
12. Serological tests:
 - Widal,
 - HBsAg /anti HIV detection.
 - CRP

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Basics of Biochemical and Biophysical Techniques Practical

Course Code	BML211
Course Title	Basics of Biochemical and Biophysical Techniques Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course Objective (CO)	To provide hands-on training on operational use of various equipments such as spectrophotometers, flame photometers, electrophoretic units etc. used in analytical techniques.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be well versed with the principle, working & maintenance of different techniques such as spectrophotometer, colorimeter, flame photometer, electrophoresis and centrifuges. • Students will be able to prepare polyacrylamide gel and perform SDS-PAGE

LIST OF PRACTICALS

1. Demonstration of principle, working & maintenance of spectrophotometer.
2. Preparation of standard curve by measurement of the transmission of light through different solutions or substances at different wavelengths of light.
3. Demonstration of principle, working & maintenance of colorimeter.
4. Demonstration of principle, working & maintenance of flame photometer.
5. To demonstrate the separation of amino acids by paper chromatography.
6. To demonstrate the principle & demonstration of TLC.
7. To demonstrate theory, principle and procedure for preparation of agarose and polyacrylamide gels.
8. To demonstrate the principle and procedure for separation of proteins on SDS-PAGE.
9. Demonstration of serum electrophoresis.
10. To demonstrate the principle and working of centrifuges.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Basics of Computers Lab

Course Code	CSE213
Course Title	Basics of Computers Lab
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks./ Lateral Entry
Course Objective (CO)	This course will enable students to understand the importance of information and communication technology (ICT). It aims to develop understanding about the components of computer, application software uses.
Course Outcome	At the conclusion of the course, <ul style="list-style-type: none"> • Students will acquire knowledge of the fundamental concepts of computers. • Students will be familiar with operating systems, programming languages, peripheral devices, networking, multimedia and internet. • Students will understand binary, hexadecimal and octal number systems and their arithmetic.

LIST OF PRACTICALS

1. Given a PC, name its various components and peripherals. List their functions
2. Practice in installing a computer system by giving connection and loading the system software and application software
3. Exercises on entering text and data (Typing Practice)
4. Installation of operating System viz. Windows XP, Windows 2007 etc.
Features of Windows as an operating system
 - Start
 - Shutdown and restore
 - Creating and operating on the icons
 - Opening closing and sizing the windows
 - Using elementary job commands like – creating, saving, modifying, renaming, finding and deleting a file
 - Creating and operating on a folder
 - Changing setting like, date, time, colour (back ground and fore ground)
 - Using short cuts
 - Using on line help
5. **Word Processing (MS Office/Open Office)**
 1. File Management:
Opening, creating and saving a document, locating files, copying contents in some different file(s), protecting files, giving password protection for a file
 2. Page Set up:
Setting margins, tab setting, ruler, indenting
 3. Editing a document:
Entering text, Cut, copy, paste using tool- bars

4. Formatting a document:

Using different fonts, changing font size and colour, changing the appearance through bold/ italic/ underlined, highlighting a text, changing case, using subscript and superscript, using different underline methods

Aligning of text in a document, justification of document, Inserting bullets and numbering

Formatting paragraph, inserting page breaks and column breaks, line spacing

Use of headers, footers: Inserting footnote, end note, use of comments

Inserting date, time, special symbols, importing graphic images, drawing tools

5. Tables and Borders:

Creating a table, formatting cells, use of different border styles, shading in tables, merging of cells, partition of cells, inserting and deleting a row in a table

Print preview, zoom, page set up, printing options

Using Find, Replace options

6. Using Tools like:

Spell checker, help, use of macros, mail merge, thesaurus word content and statistics, printing envelopes and labels

Using shapes and drawing toolbar,

Working with more than one window in MS Word,

How to change the version of the document from one window OS to another

Conversion between different text editors, software and MS word

6. Spread Sheet Processing (MS Office/Open Office)

1. Starting excel, open worksheet, enter, edit, data, formulae to calculate values, format data, create chart, printing chart, save worksheet, switching between different spread sheets

2. Menu commands:

Create, format charts, organise, manage data, solving problem by analyzing data, exchange with other applications. Programming with Excel Work Sheet, getting information while working

3. Work books:

Managing workbooks (create, open, close, save), working in work books, selecting the cells, choosing commands, data entry techniques, formula creation and links, controlling calculations, working with arrays

1. Editing a worksheet, copying, moving cells, pasting, inserting, deletion cells, rows, columns, find and replace text, numbers of cells, formatting worksheet

2. Creating a chart:

3. Working with chart types, changing data in chart, formatting a chart, use chart to analyze data

4. Using a list to organize data, sorting and filtering data in list

5. Retrieve data with query: Create a pivot table, customising a pivot table. Statistical

6. analysis of data

7. Exchange data with other application: embedding objects, linking to other applications, import, export document.

7. PowerPoint Presentation (MS Office/Open Office)

a) Introduction to PowerPoint

- How to start PowerPoint

- Working environment: concept of toolbars, slide layout, templates etc.

- Opening a new/existing presentation

- Different views for viewing slides in a presentation: normal, slide sorter etc.

b) Addition, deletion and saving of slides

c) Insertion of multimedia elements

- Adding text boxes

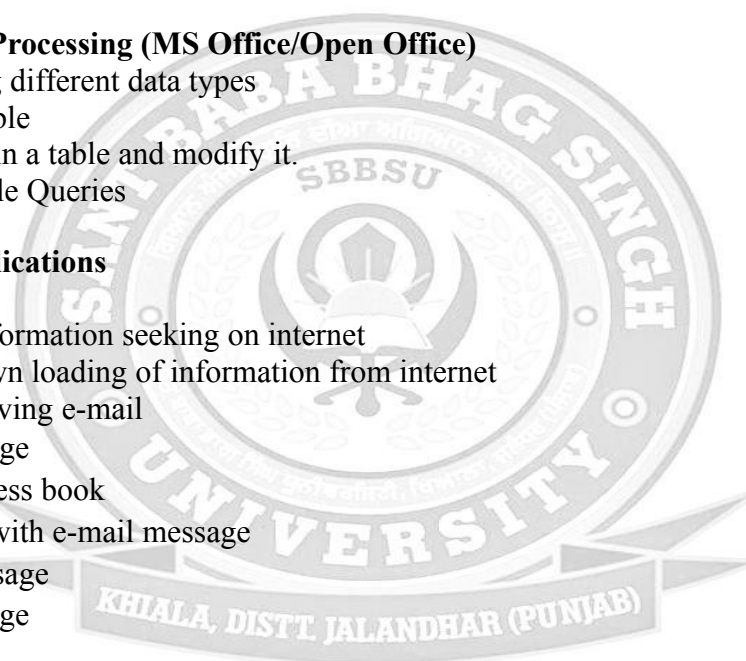

- Adding/importing pictures
- Adding movies and sound
- Adding tables and charts etc.
- Adding organizational chart
- d) Formatting slides
 - Using slide master
 - Text formatting
 - Changing slide layout
 - Changing slide colour scheme
 - Changing background
 - Applying design template
- e) How to view the slide show?
 - Viewing the presentation using slide navigator
 - Slide transition
 - Animation effects etc.

8. Working with Data Processing (MS Office/Open Office)

- a) Understanding different data types
- b) Creation of table
- c) Entering data in a table and modify it.
- d) Creating simple Queries

9. Internet and its Applications

- a) Log-in to internet
- b) Navigation for information seeking on internet
- c) Browsing and down loading of information from internet
- d) Sending and receiving e-mail
 - Creating a message
 - Creating an address book
 - Attaching a file with e-mail message
 - Receiving a message
 - Deleting a message

Clinical Biochemistry I

Course Code	MLS202
Course Title	Clinical Biochemistry-I
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	The course is intended to make the students familiar with various methods of clinical sample analysis for biochemical parameters which are the basis for diagnosis of various diseases.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will learn the principles and assessment of Liver function test, gastric test and renal functional test. • Students will understand the routine biochemical investigation and metabolic disorders associated with electrolyte imbalance. • Students can demonstrate the mechanisms and significance of enzyme assays

UNIT-I

Introduction to Clinical laboratory: Laboratory organization, management and maintenance of records, Hazards & safety measures in clinical biochemistry laboratory, Quality control and quality assurance.

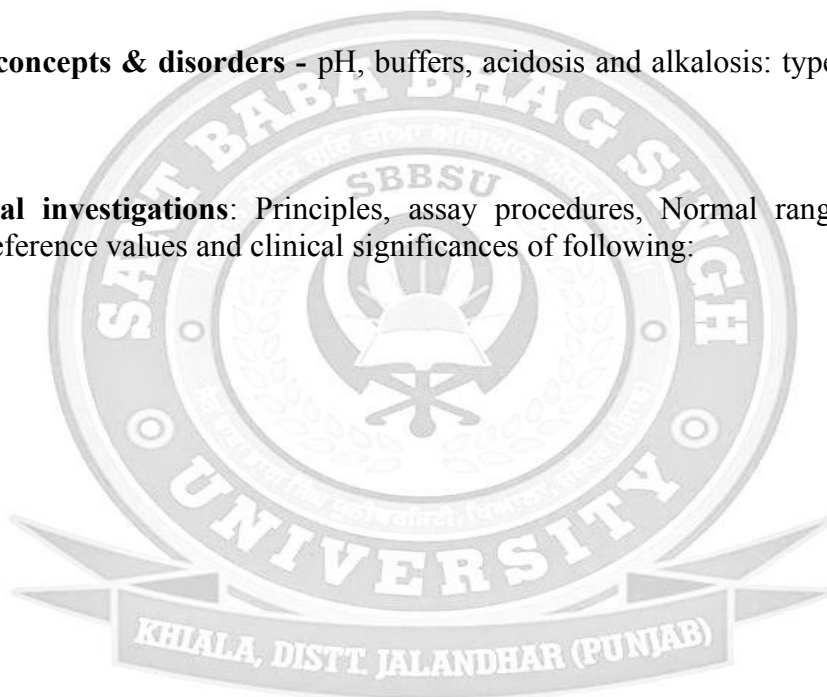

UNIT-II

Acid base balance concepts & disorders - pH, buffers, acidosis and alkalosis: types, causes and health complications.

UNIT-III

Routine biochemical investigations: Principles, assay procedures, Normal range in blood, Serum, Plasma and Urine, reference values and clinical significances of following:

- Glucose
- Proteins
- Urea
- Uric acid
- Creatinine
- Bilirubin
- Cholesterol
- Sodium
- Potassium
- Chloride,
- Iodine
- Calcium
- Phosphorous

UNIT-IV

Examination of Body fluids & glycemc disorders:

Chemical examination of Urine: composition of urine, collection, preservation and changes in composition of urine in relation to various diseases.

Cerebrospinal fluid: composition, collection and preservation, physical and chemical examination of CSF.

Hyperglycemia & hypoglycaemia: Diabetes mellitus - definition, types, features, gestation diabetes mellitus, glucose tolerance test, Causes of glycosuria & hypoglycemia.

Hematology – III

Course Code	MLS206
Course Title	Hematology – III
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	The course has been designed to provide students' knowledge related to principle of tests, methodology of routine as well as advanced procedures being carried out in the laboratory by using routine as well as sophisticated instruments. Stress is also given in use of safety measures in the laboratory
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be familiar with principles, procedure, normal value and clinical significance and other safety protocols applicable to the hematology laboratory. • Students will be able to interpret laboratory results for hematology testing and classify them as normal or abnormal. • Students will understand the immunohematology principles and bone marrow examination

UNIT-I

Special Hematological tests: Principle, procedures, normal values and clinical significance of following hematological tests:

1. Sickling tests
2. Osmotic fragility test
3. Determination of HbF and HbA₂
4. Haemoglobin Electrophoresis
5. Investigation of Glucose-6-phosphate dehydrogenase deficiency
6. Plasma haptoglobin and demonstration of hemosiderin in urine
7. Tests for Autoimmune haemolytic anaemia
8. Measurement of abnormal Hb pigments
9. Laboratory diagnosis of protozoon blood parasites
10. Preparation and staining of Heinz body
11. Preparation and demonstration of Lupus erythematosus (LE) cell

UNIT-II

Immuno-hematology: Principles of immunohematology, Human blood group systems (basic genetics of ABO & Rh blood group systems)

Methods of blood group typing: saline method, albumin displacement technique and enzyme techniques.

UNIT-III

Bone Marrow Examination: Composition and functions, Bone marrow aspiration, Preparation of bone marrow smear for microscopic examination

UNIT-IV

Staining methods- Romanowsky stains.

Immunology and Mycology

Course Code	MLS210
Course Title	Immunology and Mycology
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	<ul style="list-style-type: none"> • The student will learn the basics of immunology including structural components, their functions and underlying mechanisms. • To impart the knowledge of collection of samples, their processing and identification of various fungal and viral infections and diagnosis of microbial infections by serological methods.
Course Outcome	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students will be able to outline, compare and contrast the key mechanisms and cellular players of innate and adaptive immunity and how they relate. • Students will be able to apply this knowledge to identify the mechanisms of inflammation, Antigen- Antibody interactions. • Students will be able to understand the concept of mycology (fungi) • Students will be able to apply the knowledge to understand the pathogenesis of fungi, etiological agents and the chief infectious diseases.

UNIT-I

Overview to Immunology: Types of immunity: innate and adaptive, cells of immune system; T- Cells, B- Cells, null Cells; monocytes, polymorphs, primary and secondary lymphoid organs.

Humoral response: Antigen and Antibody and their characteristics, primary and secondary immune response and effector mechanism.

UNIT-II

Antigen-antibody interaction: general features, mechanisms and applications of various antigen-antibody interaction techniques.

Cell mediated Immunity: Role of MHC in cell mediated IR, T-cell receptor complex and effector mechanism., Immunity to infectious diseases, Tumour Immunology and Immunology of AIDS

Autoimmunity: Immunologic tolerance and autoimmunity Immune responses against tumors and transplants Hypersensitivity reaction.

Immunotechnology: Precipitation and agglutination reactions: bacterial haemagglutination haemagglutination inhibition; Immuno-diffusion (Radial and double diffusion) and electro-immunodiffusion, Immuno-electrophoresis, Radioimmuno assay, ELISA and immuno histochemical staining methods

UNIT-III

Mycology: Introduction, general characteristics, classification and medically important fungi, nomenclature, diseases and their characteristics

Identification and sensitivity: Staining techniques, culture media, laboratory contaminants, chemotherapeutic agents for fungi

UNIT-IV

Pathogenesis and laboratory diagnosis of Fungi: Superficial mycoses (*Tinea versicolor*, *Tinea nigra*, *Piedra*, and *Dermatophytoses*), Subcutaneous mycoses (*Mycetoma*, *sporotrichchosis*, *Rhinosporidiosis*) and Systemic mycoses (*Candidiasis*, *Cryptococcosis*, *Penicillosis* and *Aspergillosis*)

Histopathology and Histopathological Techniques

Course Code	MLS214
Course Title	Histopathology and Histopathological techniques
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	To study pathologically altered structure and function of diseased cells, tissues and organs To understand the importance of tissue as a key resource for investigation and to evaluate the efficacy of future treatment modalities.
Course Outcome	At the conclusion of the course, <ul style="list-style-type: none"> • Students will be able to explain the theoretical background to tissue fixation, tissue processing, microtomy and staining using routine and specialized techniques • Students will be able to illustrate the pathological condition of tissue and relate it with diseased condition • Students will identify and explain the causes of technical defects in histological preparations, and rectify such defects and know its influence on the diagnostic process

UNIT-I

General understanding of the terms – Histology, histopathology and histopathological techniques.

Organization of histopathological laboratory: Basic requirements of histopathology laboratory. (Glass wares, chemical and Reagent, Equipment and Instruments). Responsibilities of a histotechnologist.

UNIT-II

General introduction to processing of tissues. cell nucleus, cyto Membranes, cytoplasm, cell division). Basic steps in tissue processing fixation, embedding, microtomy, staining, mounting.

Fixation and fixatives - Aim of fixation, classification of fixation, classification of fixatives, Different fixatives used, its advantages and disadvantages.

Decalcification - Aim of decalcification, selection of tissue, fixation, decalcifying agents used, Decalcification techniques.

Tissue processing- Technique of dehydration, clearing (Aim of cleaning, different cleaning agents), Impregnation, techniques of casting Blocking, section cutting. Principles, operation, parts and use of automatic tissue processors.

UNIT-III

Microtomes-Different types of microtomes, microtone knives.

Staining- Principles of staining Basic staining techniques, special stains in histopathological studies.

Mounting- Different mounting media and mounting techniques.

UNIT-IV

Museum techniques- General introduction, organization of museum, mounting of museum specimens.

Frozen sections- Principles, methods used, freezing micro sections, staining of frozen sections and application of frozen sections.

Immunohistochemistry

Basics of Virology

Course Code	MLS218
Course Title	Basics of Virology
Type of course	Theory
L T P	2 1 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective	To impart the knowledge of collection of samples, their processing and identification of viral infections
Course Outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will have basic knowledge of virology and able to differentiate types of viruses. • Students will be able to apply this knowledge to understand the mode of infection. • Students will be able to analyze the role of molecular techniques to identify diseases and its diagnosis. • Students will learn about culture, collection, handling and transport of clinical samples.

UNIT-I

Introduction to medical virology: Nomenclature, classification and general properties (physical, chemical and biological), and general laboratory diagnosis of viral diseases

UNIT-II

DNA viruses: mode of infection, spread, laboratory Diagnosis of : Pox, Adeno, Papova, Herpes, Parvo, HBV.

UNIT III

RNA viruses: mode of infection, spread, laboratory Diagnosis of Polio, Influenza, Para influenza, mumps, Measles, Rubella, Respiratory syncytial, Rota, Hepatitis, arbo viruses prevalent in India (Dengue, West Nile, Japanese Encephalitis, KFD)

UNIT-IV

Laboratory collection and processing: Collection, transportation, processing and storage of samples for viral diagnosis

Text and Reference Books

Applied Bacteriology

Course Code	MLS 220
Course Title	Applied Bacteriology
Type of course	Theory
L T P	2 0 0
Credits	2
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	The part will cover the strategy in the Laboratory diagnosis of various infective syndromes i. e. choice of samples, collection and transportation and processing of samples for isolation of bacterial pathogen and then to put antibiotic susceptibility testing. This will also cover Bacteriological examination of water, milk, food and air and nosocomial infections
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will learn applications of Microbiology such as Microbial Pathogenicity & Laboratory diagnosis of various infective syndromes. • Students will be able to demonstrate Antibiotic susceptibility testing in bacteriology. • Students will have knowledge about the collection, transportation and processing of bacteriological examination of water, milk, food, air samples & methods to preservation of microbes.

UNIT I

Antibiotic susceptibility testing in bacteriology

- a. Definition of antibiotics
- b. Culture medium used for Antibiotic susceptibility testing
- c. Preparation and standardization of inoculums
- d. Control bacterial strains
- e. Choice of antibiotics
- f. MIC and MBC: Concepts and methods for determination
- g. Various methods of Antibiotic susceptibility testing with special reference to Stokes method and Kirby-Bauer method
- h. Tests for production of β -lactamase

UNIT II

Bacteriological examination of air

- a. Significance of air bacteriology in healthcare facilities
- b. Settle plate method
- c. Types of air sampling instrument
- d. Collection processing and reporting of an air sample

UNIT III

Sterility testing of I/v fluids

- a. Collection, transportation and processing of I/v fluids for bacterial contamination
- b. Recording the result and interpretation

UNIT IV

Nosocomial Infection

- a. Bacteriological surveillance of hospital environment.
- b. Role of microbiology laboratory in control of nosocomial infections

Preservation of microbes and Lyophilisation methods.

Introduction to National Healthcare Delivery System in India

Course Code	MLS 224
Course Title	Introduction to National Healthcare Delivery System in India
Type of course	DSE
L T P	2 0 0
Credits	2
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	The course provides the students a basic insight into the main features of the Indian health care delivery system and how it compares with the other systems of the world.
Course Outcome	At the conclusion of the course, students will acquire knowledge about national policies relating to healthcare.

UNIT I

Introduction to healthcare delivery system

- Healthcare delivery system in India at primary, secondary and tertiary care
 - Community participation in healthcare delivery system
 - Health system in developed countries.
 - Private Sector
 - National Health Mission
 - National Health Policy
 - Issues in Health Care Delivery System in India
- National Health Programmes – Background objectives, action plan, targets, operations, achievements and constraints in various National Health Programmes.

UNIT II

Introduction to AYUSH system of medicine

- Introduction to Ayurveda
- Yoga and Naturopathy
- Unani
- Siddha
- Homeopathy
- Need for integration of various systems of medicine

UNIT III

Health scenario of India – past, present and future. Public health in India (epidemiology and demography)

- Demography & Vital Statistics
- Demography – its concept
 - Vital events of life & its impact on demography
 - Significance and recording of vital statistics
 - Census & its impact on health policy

UNIT IV

Epidemiology

- Principles of epidemiology
- Natural history of disease
- Methods of epidemiological studies
- Epidemiology of communicable & non-communicable diseases, disease transmission, host defense immunizing agents, cold chain, immunization, disease monitoring and surveillance.

Medical Terminology and Medical Records

Course Code	MLS 226
Course Title	Medical Terminology and Medical Records
Type of course	DSE
L T P	2 0 0
Credits	2
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	This subject introduces the elements of medical terminology
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will acquire knowledge of the terminology used by various domain doctors and practioners for the diagnosis, treatment of disease. • Students will understand the importance of medical records

UNIT I

- A. Introduction to medical terminology
- B. Word formation & syntax
 - Greek alphabet
 - Greek & Latin prepositional & adverbial prefixes
 - Singular & plural endings
- C. Commonly used prefixes, suffixes and root words in medical terminology
- D. Common Latin term used in prescription writing
- E. Study of standard abbreviations
- F. Commonly used medical terms to define different parts of the body

UNIT II

Medical terminology used by: Cardiologist, Neurologist, Nephrologist, Gastro-intestinologist, ENT surgeon, Dentist, Orthopedic surgeon, Gynecologist, Oncologist, Dermatologist and Endocrinologist.

UNIT III

Medical record: Definition and Types of medical record, Importance of medical record, Flow chart of function, Statutory requirements of maintenance, coding, indexing and filing, Computerization of record, Report and returns by the record department, Statistical information and ICD.

UNIT IV

Utility & functions of Medical Records in Health care delivery System. Organizations & management of Medical Records Department, Role of Hospital managers & MRD personnel in Medical record keeping. Reports & returns in Medical Record System.

Basic knowledge of legal aspects of Medical Records including Factories Act, Workmen Compensation Act & Consumer Protection Act. Procedures of Medical Auditing & its importance, Government Regulations & requirements

Clinical Biochemistry- I Practical

Course Code	MLS 204
Course Title	Clinical Biochemistry Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks.
Course Objective (CO)	To impart hands on training on sample collection, preservation and operational procedures of routine biochemical tests performed in clinical laboratory
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to carry out sample collection & specimen labeling of clinical samples. • Students will be able to perform the clinical biochemical analysis of biological fluid samples. • Students will be able to differentiate between normal and diseased condition based on biochemical analysis

LIST OF PRACTICALS

1. Sample collection & specimen labeling of clinical samples
2. Interpretation and quoting of results of following routine tests performed in clinical biochemistry laboratory:

Estimation of Serum

 - a. Total proteins – albumins and globulins
 - b. Creatinine
 - c. Bilirubin
 - d. HDL and LDL
 - e. Total porphyrins
 - f. Coproporphyrin
 - g. Calcium
 - h. Phosphorus
 - i. Electolytes – Sodium, Potassium and chloride
3. Determination of Glucose tolerance test.
4. Urine analysis – normal & abnormal constituents of urine
5. CSF analysis – physical and chemical examination.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Hematology-III Practical

Course Code	MLS208
Course Title	Hematology-III Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	This subject aims to enable the students to carry out routine clinical laboratory investigation (blood, urine etc). He/she should be able to provide technical help for sophisticated hematological techniques with adequate knowledge of various principles.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be familiar with the mechanism of ABO grouping and Rh typing. • Students will learn blood collection & preservation using different anticoagulants & preservative solutions • Students will be able to investigate blood and perform special hematological tests

LIST OF PRACTICALS

1. Blood collection & preservation using different anticoagulants & preservative solutions
2. Component preparation
3. ABO grouping
4. Rh typing
5. Preparation of bone marrow smear for microscopic examination
6. Processing and staining of smear using Romanowsky stains
7. Investigation of blood from SLE patient for presence of LE cells.
8. Special hematological tests
 - 1.1. Sickling test
 - 1.2. Osmotic fragility
 - 1.3. Hemoglobin electrophoresis
 - 1.4. Determination of Foetal hemoglobin
 - 1.5. Demonstration of LE cells
 - 1.6. Test for Glucose-6-Phosphate dehydrogenase deficiency

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Immunology and Mycology Practical

Course Code	MLS212
Course Title	Immunology and Mycology Practical
Type of course	Practical
L T P	0 0 3
Credits	1.5
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	The practical is aimed to make the students competent to isolate and identify fungi and viruses and do serological tests for various microbial infections.
Course Outcome	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students will be able to understand the basic laboratory practices in the field of immunoserology and mycology . • Students will be able to understand the concepts of antigen-antibody interaction via various immunological techniques for the diagnosis of disease. • Students will be able to apply this knowledge to understand the process of cultivation and identification of fungi on different medium from different samples

LIST OF PRACTICALS

1. Collection of blood sample by vein puncture, separation and preservation of serum
2. Raising haemolysin in Rabbit and performing its titration for Rose-Waaler test.
3. Demonstration of antigen / antibody determination by Immunofluorescence, Immunodiffusion, precipitation in agarose gel (Ouchterlony), CIEP, ELISA.
4. To perform the cultivation and identification of fungi on SDA, RSA and CMA.
5. To perform the tease mount of mycelial filaments in Lactophenol cotton blue stain.
6. To perform the isolation and identification of fungi from soil sample.
7. To perform the isolation and identification of fungi from skin sample.
8. To perform the isolation and identification of fungi from air
9. To perform the India ink preparation of the yeast cells.
10. To perform the sensitivity testing of the fungal specimen.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Histopathology and Histopathological Techniques Practical

Course Code	MLS216
Course Title	Histopathology and Histopathological techniques Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	This part of the subject is aimed at exposing the students to the latest advancements and automation in the field of histopathology.
Course Outcome	At the conclusion of this course: <ul style="list-style-type: none"> • Students will be able to perform the basic steps of tissue processing. • Students will understand the various methods of preparation of tissue sections, Paraffin section, celloidin embedding, frozen section.

LIST OF PRACTICALS

1. Basic steps of tissue processing
 - a) Preparation of fixatives and fixation.
 - b) Embedding.
 - c) Microtomy.
 - d) Staining.
 - e) Mounting
2. Various methods of preparation of tissue sections.
 - a) Paraffin section,
 - b) celloidin embedding
 - c) frozen section
3. Decalcification.
4. Tissue processing (Manual / Automatic).
5. Section cutting and sharpening of microtone knife.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Applied Bacteriology Practical

Course Code	MLS 222
Course Title	Applied Bacteriology Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	The main objective of the subject is to impart the knowledge of different microbiological techniques to provide hands on training to perform various microbiological tests.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will understand the basic laboratory practices in the field of bacteriology. • Students will be able to perform antibiotic susceptibility testing of clinical isolates by using standard method. • Students will learn collection, transportation and processing of various clinical samples & preservation of isolates.

LIST OF PRACTICALS

1. Antimicrobial susceptibility testing
 - a. Introduction and terms used
 - b. Preparation and standardization of inoculum
 - c. To demonstrate reference bacterial strains
 - d. Choice of antibiotics
 - e. To determine MIC and MBC a known bacterium against a known antibiotic
 - f. To perform antibiotic susceptibility testing of clinical isolates by using
 - a) Kirby-Bauer method b) Stokes method
 - g. To perform any one test to demonstrate the production of β -lactamase
2. Collection, transportation and processing of air samples for bacteriological examination
3. To demonstrate sterility testing of intravenous fluid with positive and negative controls
4. Demonstration of lyophilization
5. To learn 'How to dispose of bacterial cultures'

Clinical Biochemistry – II

Course Code	MLS301
Course Title	Clinical Biochemistry – II
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	B.Sc MLS / B.Sc MLT –II
Course Objective (CO)	The students will learn the advanced principles and procedures of clinical biochemistry for diagnosis and monitoring of human disease and their applications to biomedical research.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the concepts of various biological fluids for determining the proper functioning of the system. • Students will apply this knowledge to understand the mechanism of metabolic errors and electrolyte imbalance. • Students will analyze the processes of investigation and hypothesis testing. • Students will evaluate the clinical significance of enzymes to rule out the disorders

UNIT-I

Liver function tests: role of the liver in metabolism, formation of bilirubin and mode of excretion. Tests accessing the excretory and synthetic and metabolic function of liver, tests for clearance of exogenous substances from liver

Gastric analysis: composition of gastric juice, concepts of free and combined acids, gastric acid secretion stimulations. Methods of gastric analysis – collection of sample, titration and interpretation of results, Stimulation tests, Hollander's test, tubeless gastric analysis, congo red test during oesophagogastroduodenoscopy

UNIT-II

Renal function tests: factors affecting renal function, renal function test – test for GFR, inulin clearance, creatinine clearance, urea clearance, clearance of radiolabelled agents.

Renal Calculi: theory of formation and analysis, renal clearance concentration and application of phenol sulfonaphthalein.

UNIT-III

Electrolyte metabolism: calcium metabolism, phosphate metabolism, sodium-potassium balance and trace element (Fe, Cu).

Metabolic disorders of proteins and amino acids, inborn errors of metabolic disorders

UNIT-IV

Diagnostic Enzyme assays: Clinical significances of enzyme assays, principle, procedures, normal values and clinical significances of SGOT, SGPT, phosphatases (acid & alkaline), LDH isozymes, Creatinine phosphokinase in liver diseases, myocardial infarctions, muscle and bone diseases and malignancies

Cellular and Histopathology

Course Code	MLS305
Course Title	Cellular and Histopathology
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	The students will obtain the basic knowledge of core aspects of pathology including, etiology, pathogenesis, morphological changes and functional de-arrangements as well as various causes and consequences of diseases.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to define the Cell injury, adaptations and cell death. • Students will understand the Cellular and systemic Pathology of digestive glands, Cardiovascular diseases, Diseases of respiratory organs, Diseases of urinary system • Students will be able to define the Reproductive disorders, Neural disorders, Endocrine disorders

UNIT-I

Cell injury and adaptations: Normal Cell, types of cell injury, morphology and etiology of cell injury, cellular swelling

Types of cell death: autolysis, necrosis, apoptosis and gangrene

Cellular adaptations: atrophy, hypertrophy, hyperplasia and dysplasia

Inflammation: types- acute and chronic inflammation, events involved in inflammatory response.

UNIT-II

Haemodynamic disorders: Oedema, hyperemia, congestion, hemorrhage, circulatory disturbances, thrombosis, ischemia & infarction

Neoplasia: Definition, how does it differ from hyperplasia, difference between benign tumor and malignant tumor

Healing: Definition, different phases of healing, factors influencing wound healing

UNIT-III

Cellular and systemic Pathology: Study of diseases of various body organs and systems

Alimentary Canal: diseases of mouth, disease of oesophagus; oesophageal varices, gastritis, peptic ulceration, appendicitis, microbial disease, food poisoning, hernia, intestinal obstructions and malabsorption

Disease associated with accessory digestive glands: mumps, hepatitis, liver failure, cirrhosis, pancreatitis, Gall stones and jaundice

Cardiovascular diseases: diseases of blood- Atheroma, Arteriosclerosis, heart block. Disorders of Blood Pressure-Hyper & Hypotension

Diseases of respiratory organs: Upper respiratory tract infection, Bronchi, Asthma, Pneumonia, Lung abscess, Tuberculosis, Lung Collapse

Diseases of urinary system: Glomerulonephritis, Nephrotic syndrome, Renal failure, Renalcalculi, Urinary obstruction, Urinary tract infection.

UNIT-IV

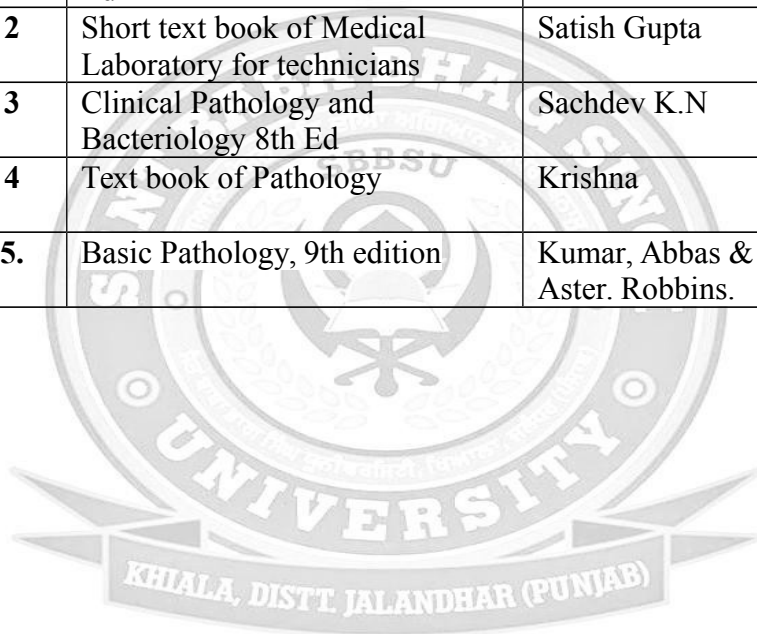

Reproductive disorders: Sexually transmitted diseases, Pelvic inflammatory disease, disorder of cervix (CIN), Disease of ovaries, ectopic pregnancy, prostatitis, Infertility

Neural disorders: Neuronal damage, ICP, Cerebral Infarction, head injury, Alzheimer's disease, dementia.

Endocrine disorders: Pituitary: Hyper & Hypo secretions of pituitary, Goiter, Adrenal Cushing Syndrome, Addison Disease, Pancreatic diabetes

Blood Banking and Transfusion reactions

Course Code	MLS309
Course Title	Blood Banking and Transfusion reactions
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	Blood transfusion has become a life saving procedure in modern medical sciences. To avoid any mistake, the students must understand to learn the blood bank procedures, such as ABO & Rh blood grouping carefully, accurately and long-term preservation for safe blood transfusion.
Course Outcome	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students will become familiar with standard transfusion facility protocols and procedures in a fashionable blood bank and transfusion service. • Students will learn about the importance and requirements of blood donation and learn about the principle and practices of blood transfusion. • Students will learn how to maintain records and compatibility testing and about the reaction during the blood transfusion reaction.

UNIT-I

Principle & Practices of Blood Transfusion: Principle & Practice of blood Transfusion, Blood Transfusion service at District level, Guide lines for the use of Blood, Appropriate use of Blood, Quality Assurance: Antilogous Blood Transfusion practices, Objectives of Quality Assurance in Blood Transfusion services, Standard operating procedures for usage, donation & storage of blood, screening of donor, compatibility testing, safety, procurement of supplies.

Blood donation: Introduction, Blood donor requirements, Criteria for selection & rejection, Medical history & personal details, Self-exclusion. Health checks before donating blood, Screening for TTI.

UNIT-II

Blood Collection: Blood collection packs, Anticoagulants, Taking & giving sets in Blood transfusion, Techniques of collecting blood from a doctor, Instructions given to the donor after blood donation, Adverse donor reaction.

Storage & Transport: Storage of blood, Changes in blood after storage, Gas refrigerator, Lay out of a blood bank refrigerator, Transportation.

UNIT-III

Blood banking: Testing Donor Blood- Screening donor's blood for infectious agents - HIV, HCV, HBV, palladium, Plasmodium, HTLV. Bacterially contaminated Blood.

Maintenance of Records

- **Blood Donor Records:** Blood donation record book, recording of results, Blood donor card.
- **Blood Bank Records:** Blood bank temperature sheet, Blood bank stock sheet, Blood transfusion request form.

Compatibility Testing: Purpose, Single tube compatibility techniques using AHG reagent, Emergency

compatibility testing, Difficulties in cross matching. Labeling & Issuing cross- matched blood.

UNIT-IV

Blood Components: Collection of blood components for fractional transfusion, Platelets packed Red Cell, Platelet rich Plasma, Platelets concentrate, Preparation of concentrated (packed) Red cells, Techniques of preparation.

Blood Transfusion Reactions: Investigation of a Transfusion reaction, Hemolytic transfusion reaction, Actions to take when transfusion reaction occurs.

4.	Basic Medical Laboratory Techniques	Barbara H. Estridge & Anna P. Reynolds	Delmer publishers

Health systems and Laboratory Ethics

Course Code	MLS313
Course Title	Health systems and Laboratory Ethics
Type of course	Theory
L T P	3 0 0
Credits	3
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	The course has been designed to provide students knowledge about organization of health services, programmes, principle ethics, good laboratory practices, patient and laboratory management including office, financial and biomedical waste management.
Course Outcome	<p>At the conclusion of the course:</p> <ul style="list-style-type: none"> • Students will become aware about the principles and standards of clinical laboratory. • Students will learn about the health and health related programs runs by the government. • Students will become aware about the ethics in medical laboratory practice.

UNIT-I

Introduction: Definition of Health, Determinants of Health, Health Indicators of India, National Health Policy

Organization of Health services: Brief description of organization of health services at the Centre and state levels

National Health Programmes: Family Welfare Programme, National Programme for water supply and sanitation, Nutritional Programmes, Immunization and universal immunization programme (Objectives and scope)

Disease Eradication programme: Leprosy & Guinea worm.

Disease control programmes: Tuberculosis, Malaria, Filaria, S.T.D, Goitre, Cholera and other diarrhaeal diseases and National Programme for prevention of blindness including trachoma.

UNIT-II

Ethical Principles and standards for a clinical laboratory professional: Duty to the patient, Duty to colleagues and other professionals, Duty to the society.

Good Laboratory Practice (GLP) Regulations and Accreditation

Introduction to Basics of GLP and Accreditation

Aims of GLP and Accreditation

Advantages of Accreditation

Brief knowledge about Nation and International Agencies for clinical laboratory accreditation

Awareness / Safety in a clinical laboratory

General safety precautions

HIV: pre- and Post-exposure guidelines

Hepatitis B & C: pre & Post-exposure guidelines

Drug Resistant Tuberculosis

Patient management for clinical samples collection: collection of sample, transportation and preservation

Sample accountability: Purpose of accountability, Methods of accountability

Sample analysis: Introduction, Factors affecting sample analysis

Reporting results: Basic format of a test report, Reported reference range, Clinical Alerts, Abnormal results, Turnaround time, Results from referral laboratories, Release of examination results, Alteration in reports

UNIT-III

Biomedical waste management in a clinical laboratory

Introduction and importance of calibration and Validation of Clinical Laboratory instruments

Laboratory Information system and financial Management: Introduction, Functions of a laboratory management system, Standards for laboratory management system, Introduction and awareness of financial management in a clinical, laboratory

UNIT-IV

Ethics in Medical laboratory Practice: Understanding the term 'Ethics', Ethics in relation to the following:

Pre-Examination procedures

Examination procedures

Reporting of results

Preserving medical records

Access to Medical laboratory Records

Audit in a Medical Laboratory: Introduction and Importance, Responsibility, Planning Horizontal, Vertical and Test audit, Frequency of audit, Documentation

Endocrinology and Toxicology

Course Code	MLS315
Course Title	Endocrinology and Toxicology
Type of course	Theory
L T P	2 0 0
Credits	2
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	This subject is framed to provide basic knowledge of hormones & toxic substances with their determination techniques as well as related disorders
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will gain knowledge about hormones, its classification and mode of action. • Students will understand the mechanism of hormonal secretion and disorders associated with hormonal imbalance. • Students will acquire knowledge about various poisoning/ toxic material and their clinical diagnosis.

UNIT -I

Hormones, Classification of hormones, organs of endocrine system their secretion and function, regulation of hormone secretion, Mechanism of action

UNIT -II

Thyroid function test: Thyroid hormones, biological function, hypothyroidism, hyperthyroidism. Determination of T3, T4, TSH, FT3, FT4, TBG, and Disorder associated with thyroid dysfunction.

UNIT-III

Infertility profile: LH, FSH, TSH, Estrogen, Progesterone, Total Testosterone, Free testosterone, DHEA-S, Prolactin, their estimation and clinical significance, reference range, hypo and hyper secretion, Triple Test

Growth hormone, ACTH, Aldosterone, Cortisol their estimation and clinical significance, reference range, hypo and hyper secretion.

UNIT-IV

Introduction of Toxicology, Alcohol poisoning, Lead poisoning, Zinc poisoning, Mercury poisoning drugs abuse, screening procedure for drug screening, Spot tests, hair and urine test, Immunoassay for drugs.

Text and Reference Books

Histotechnology and Cytology

Course Code	MLS317
Course Title	Histotechnology and cytology
Type of course	Theory
L T P	4 0 0
Credits	4
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	This part of the subject is aimed at introducing the students to the various types of tissue preparations and developing expertise in the students to cut very thin tissue sections from tissue blocks and facilitate visualization using various stains and dyes. Cytology part aims at exposing the students to the latest advancements in cytological investigations.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will understand the basics of cell, its components and their functions • Students will be able to demonstrate the routine cytological preparation and their routine and special staining techniques • Students will be able to apply the knowledge to differentiate normal and abnormal cells

UNIT-I

Introduction to Cytology: Basic terminology, Laboratory equipment for cytology, Normal cell structure, functions, cytologic criteria of malignancy, Types of specimens, methods of collection & preparation of cell block, Different fixatives and methods of fixation.

UNIT-II

Staining Techniques: Special Staining Procedures for detection of

- a. Connective tissue elements, Trichrome staining, muscle fibers, elastic, reticulin fibres, collagen fibres etc.
- b. Metachromatic staining such as toluidine blue on frozen sections
- c. Principles of metal impregnation techniques.
- d. Demonstration and identification of minerals and pigments, removal of pigments/artifacts in tissue sections
- e. Demonstration of Proteins & nucleic acids.
- f. Demonstration of Carbohydrates, lipids, fat & fat like substances.
- g. Demonstration of bacteria and fungi in tissue section.
- h. Tissue requiring special treatment i.e. eye ball, bone marrow, muscle biopsy, undercalcified or uncalcified bones, whole brain, whole lungs including other large organs.

UNIT-III

Laboratory Techniques in Diagnostic Exfoliative Cytology: Preparation of specimens for cytological evaluation, Cytological stains and staining techniques, PAP staining and identification of cells in a normal vaginal smear, Characteristics of benign and malignant cells.

UNIT-IV

Fine Needle Aspiration Cytology (FNAC)

Automation in Cytology: Principles, equipments, procedures & evaluation of flow cytometry, Image analysis.

Generic Skills and Entrepreneurship Development

Course Code	COM317
Course Title	Generic Skills And Entrepreneurship Development
Type of course	Theory
L T P	2 0 0
Credits	2
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	This paper is aimed at developing employability skills and conceptual understanding among students for setting up one's own business venture/enterprise
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to explain the importance of generic skills. • Students will Demonstrate self-development. • Students can manage himself/herself physically, intellectually and psychologically

UNIT-I

Introduction to Generic Skills -Importance of Generic Skill Development (GSD), Global and Local Scenario of GSD, Life Long Learning (LLL) and associated importance of GSD.

Leadership Skills: Managing in Team - Team definition, hierarchy, team dynamics, Team related skills- sympathy, empathy, co-operation, concern, lead and negotiate, work well with people from culturally diverse background, Communication in group -conversation and listening skills

UNIT-II

Task Management - Task Initiation, Task Planning, Task execution, Task close out, Exercises/case studies on task planning towards development of skills for task management

Problem Solving - requisites of problem solving-meaningful learning, ability to apply Knowledge in problem solving, different approaches for problem solving. Steps followed in problem solving, Exercises/case studies on problem solving.

UNIT-III

Entrepreneurship: Introduction, Concept/Meaning and its need, Competencies/qualities of an entrepreneur, Entrepreneurial Support System e.g., District Industry Centers (DICs), Commercial Banks, State Financial Corporations, Small Industries Service Institute (SISIs), Small Industries Development Bank of India (SIDBI), National Bank of Agriculture and Rural Development (NABARD), National Small Industries Corporation (NSIC) and other relevant institutions/organizations at State/National level.

UNIT- IV

Market Survey and Opportunity Identification (Business Planning)

- How to start a small scale industry
- Procedures for registration of small-scale industry
- List of items reserved for exclusive manufacture in small -scale industry
- Understanding business opportunity

Clinical Biochemistry-II Practical

Course Code	MLS303
Course Title	Clinical Biochemistry-II Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	To impart skills to perform complex clinical procedures pertaining to diagnosis of human diseases. The students will also learn to perform all clinical tests on autoanalyzers.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to understand the basic laboratory practices in the field of biochemistry. • Students will apply this knowledge to collect various clinical specimens such as: urine, blood, gastric juice etc. • Students will perform accuracy, precision and quality control

LIST OF PRACTICALS

1. Specimen collections: urine, blood, gastric juice.
2. Accuracy, precision and quality control: demonstration and preparation of two methods using histogram, F-test and Barr test.
3. Estimation of bilirubin – total and conjugates, urobilinogens
4. Determination of free and total acidity
5. Clearance tests: Urea clearance and creatinine clearance
6. Analysis of renal calculi
7. Screening for inborn errors of metabolism.
8. Determination of clinically significant enzymes: principle, procedure and clinical significance of
 - a. Serum alkaline phosphatases
 - b. SGOT
 - c. SGPT
 - d. Creatine phosphokinase
 - e. Lactate dehydrogenase
9. Demonstration on auto analyzer.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Cellular Pathology Practical

Course Code	MLS307
Course Title	Cellular Pathology Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	The students will learn to differences between the normal and pathological specimens by critically analyzing the morphological changes and functional de-arrangements.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to differentiate pathological conditions of Necrosis and apoptosis, Inflammation and Foot and hand gangrene. • Students will be familiar with the diseases of different systems such as Cardio Vascular System, Respiratory System, Digestive System, Reproductive system & Breast

LIST OF PRACTICALS

1. Study of following pathological conditions
 1. Necrosis and apoptosis
 - Inflammation
 - Foot and hand gangrene
 2. Study of diseases of following systems through permanent slides and charts:
 - a) Cardio Vascular System:
 - Atheroma-aorta
 - Atherosclerosis
 - Myocardial Infarction
 - Rheumatoid Heart Disease (Rheumatic endocarditis, Rheumatic pericarditis)
 - b. Respiratory System:
 - Lung abscess
 - TB Lung
 - c. Renal System
 - Carcinoma- kidney
 - d. Digestive System:
 - GIT: (oesophageal varices, Gastric ulcer, Adenocarcinoma-Colon, TB, Liver abscess)
 - Acute appendicitis
 - Fatty Liver
 - Gall stones
 - e. Reproductive system & Breast
 - Carcinoma breast
 - Carcinoma of cervix
 - f. Lymph nodes
 - g. Endocrine System
 - h. Musculoskeletal System
 - Osteosarcoma.
 - Osteoclastoma
 - i. CNS & PNS

- Meningitis (TB meningitis, viral meningitis, Pyogenic meningitis)

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Blood Banking and Transfusion Reactions Practical

Course Code	MLS311
Course Title	Blood Banking and Transfusion Reactions Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	Students will be able to understand the principles and practices including documentation and maintenance of records related to blood banking carefully and accurately.
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will become capable to take responsibility for examination and decision-making about testing achieved in a contemporary blood bank and transfusion service. • Student can collect blood & preserve using different anticoagulants& preservative solutions. • Students will gain expertise about component preparation, ABO grouping, Rh typing

LIST OF PRACTICALS

1. Blood collection & preservation using different anticoagulants& preservative solutions
2. Component preparation
3. ABO grouping
4. Rh typing
5. Antibody direction & titration
6. Coombs test
7. Compatibility testing & cross matches
8. Investigation of transfusion reactions
9. Investigation of hemolytic disease of new born
10. HBsAg & HIV antibody testing in blood bank

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Histotechnology and Cytology Practical

Course Code	MLS319
Course Title	Histotechnology and Cytology Practical
Type of course	Practical
L T P	0 0 2
Credits	1
Course prerequisite	10+2 Medical/ Dip in MLT/ Non-Med with 50% marks
Course Objective (CO)	This part of the subject is aimed at exposing the students to the latest advancements and automation in the field of histopathology and cytology
Course Outcome	At the conclusion of the course: <ul style="list-style-type: none"> • Students will be able to prepare smear and slides for cytological testing. • Students will be able to perform specialized staining of cytological samples. • Students will be able to interpret laboratory results and able to differentiate between malignant and benign tumors.

LIST OF PRACTICALS

1. Collection of samples and processing.
2. Cytological fixatives and fixation.
3. Special Staining Procedures for detection of
 - a. Connective tissue elements, Trichrome staining, muscle fibers, elastic, reticulin fibres, collagen fibres etc.
 - b. Metachromatic staining such as toluidine blue on frozen sections
 - c. Principles of metal impregnation techniques.
 - d. Demonstration and identification of minerals and pigments, removal of pigments/artifacts in tissue sections
 - e. Demonstration of Proteins & nucleic acids.
 - f. Demonstration of Carbohydrates, lipids, fat & fat like substances.
 - g. Demonstration of bacteria and fungi in tissue section.
 - h. Tissue requiring special treatment i.e. eye ball, bone marrow, muscle biopsy, uncalcified bones, whole brain, whole lungs including other large organs.
4. Collection and preparation of fluid sediment for cytological examination.
5. Preparation and fixation of sputum smears for cytology and preparation.
6. Preparation and fixation of vaginal and cervical smears for cytology.
7. Hormonal evaluation of vaginal smears.
8. Papanicolaou staining-principles and staining procedures.
9. Identification of cells.
10. Differentiation between malignant and benign cells.

Note: Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos

Professional Training

Course Code	MLS302
Course Title	Professional Training
Type of course	Practical
L T P	0 0 26
Credits	26
Course prerequisite	B.Sc MLS / B.Sc MLT – II
Course Objective (CO)	The students will undergo 3 months training to learn about latest diagnostic techniques used in laboratories
Course outcomes	At the conclusion of the course: <ul style="list-style-type: none"> • Students will gain confidence at the workplace and have fruitful interaction with the employer, colleagues and the work force in general . • It also increases the thinking horizon by helping one arrange different kinds of activities at the workplace for all the employees. • There is another section of a workplace that can be targeted, i.e. behavioural problems.

Guideline To Carry Out Training

1. Purpose of training: The main purpose of training is to make the students familiar with the latest techniques used in the diagnosis. This will not only help train the inquisitive minds of the students, but also inspire them to take up research- oriented higher studies and career.

2. Duration of training :- Recommended duration of training is 05 months which includes 3 months of training and 2 months for report compilation. The students should undergo training in a reputed hospital with well established laboratories.

3. Submission of training report:-

- a. After completion of training each student should prepare a PowerPoint presentation to be delivered to the respective department committee.
- b. The committee should conduct comprehensive viva-voce of the students.
- c. The final copy of the report (2 Copies) will have to be submitted to the respective CODs.
